Steeple . . . is a general term, and applies to . . . [either a] tower or spire, or combination of the two.—*Gwilt, Encyclopædia of Architecture, Glossary.*

In one instance, a joke about explanation has been taken for fact, and explanations given of it. Bacon, or Selden, or some such dry humourist, put forth the sarcasm of the old man who took Tenterden *steeple* to be the cause of the Goodwin Sands, because he never heard of the Sands until after the *steeple* was built. Those who should have been hit by this, but were not, accepted the fact, and proceeded to account for it. They put forth that some funds destined for lights or other warnings, were diverted to build the *steeple*; whence of course increased the wrecks. So it would seem that any sarcasm aimed at universal expositors may be but a missionary to the cannibals, one dinner more.—*From Matter to Spirit, by C. D., Preface, by A. B.*

As the *first element* in a *compound*.

Steéplehouse. *s.* Contemptuous name for a church.

Steérer. *s.* One who steers; steersman; pilot.

Now what the artificer is to works of art, who orders and disposes them to other ends than by nature they were made, that is the Maker of all things to all natural agents, directing all their operations to ends which they cannot apprehend; and thus appears the Maker to be the *Steerer* of this great ship, the Law of this universal commonwealth, the General of all the hosts of heaven and earth.—*Bishop Pearson, Exposition of the Creed*, art. i.

Stéllionate. *s.* [see extract; more probably from the root of *stigma*, which applies to the spots on the lizard or eft.] In *Law.* Deceitful selling of a thing otherwise than it really is: as, if a man should sell that for his own estate which is actually another man's.

It discerneth of crimes of *stellionate*, and the inchoations towards crimes capital, not actually committed.—*Bacon.*

The name is said to be derived from *stellio*, a lizard, because the fraudulent man may be compared with that animal for versatility and address. The six common species of *stellionate* enumerated by Roman writers were: 1. When one sells the same thing to two purchasers; 2. When a debtor pledges to his creditors something which does not belong to *him*; 3. When one abstracts or damnifies something which he has pledged to creditors; 4. Collusion by two parties to the prejudice of a third; 5. When a vendor substitutes an object of less value for that which he has engaged to sell; 6. A wilful false declaration in an instrument.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Stemples in mining [are] cross-bars of wood in the shafts. ... The first method of making this paper was *stencilling*; by laying upon it, in an extended state, a piece of pasteboard having spaces cut out of various figured devices, and applying different water-colours with the brush. Another piece of paper with other patterns cut out was next applied, when the former figures were dry, and new designs thus imparted.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Stenógraphy. *s.* [Gr. στενὸς = narrow + γραφή = writing; γράφω = I write.] Art of writing in shorthand; shorthand.

Some will preamble a tale impertinently, and cannot be delivered of a jest, till they have travelled an hour in trivials, as if they had taken the whole tale by *stenography*, and now were putting it out at large.—*Felltham, Resolves*, i. 93.

O the accurst *stenography* of state!
The princely eagle shrunk into a bat. *Cleaveland.*

The art of short-hand was first attempted in this country by Dr. Timothy Bright, who published his 'Characterie' in the year 1588. The 'Writing Schoolmaster' of Mr. Peter Bale appeared two years after Dr. Bright's work. Bale's book is divided into three parts, the first of which is entitled 'Brachygraphy,' and contains rules to write as fast as a man can speak with propriety and distinction. In 1618 appeared 'Willis's *Stenography*, or Short-hand Writing by Spelling Characters.' ... Henry Dix's 'Brachygraphy' was an attempt to improve upon Willis's.—*Rees, Cyclopædia.*

Stenography has of late years become a part of academical instruction, and therefore any endeavour to extend its utility and further its improvement, requires neither apology nor excuse. It would be almost a waste of time to dwell at any length or with an affected formality, upon the advantages to be derived from the study of *stenography* when the recent establishment of institutions of *all* kinds has opened new channels of improvement to the people at large, and to which all classes of persons may obtain access on the most moderate terms. And what can or ought to claim a greater share of attention than an art which improves the memory, supplies it with mental aliment, and enables its possessor to enrich his commonplace book with such otherwise fugitive portions of co-temporary history, as might without the aid of short-hand be lost to posterity?—*C. Latham, An Attempt to re-model the Art of Stenography on new and more primitive Principles than the Systems now in Use*: 1828.

Stent. *v. a.* Stint: (Spenser uses it for the sake of his rhyme).

Therewith Sir Guyon left his first emprise,
And turning to that woman, fast her hent

Her bitter rayling and foule revilement.
Spenser, Faerie Queen, ii. 4. 12.

At that moment the waiter entered the room, and, in a *stentorian* voice, said, 'Gentlemen, is either of your names Gurney?'—*Theodore Hook, Gilbert Gurney*, vol. iii. ch. v.

'Why, I suppose you don't mean to spend the evening in the stable or the coach-house,' he returned. 'That, indeed, is not such hospitality as I would show to you my friend,' cried Mr. Pecksniff, pressing his hand. And then he took a long breath, and tapping at the window, shouted with *stentorian* blandness, 'Boh!'—*Dickens, Martin Chuzzlewit*, ch. xx.

That roar'd far off! *Butler, Hudibras*, iii. 1, 251.

Of this *stentorophonick* horn of Alexander there is a figure preserved in the Vatican. —*Derham, Physico-Theology.*

The speaking trumpet, under the title of the *stentorophonic* tube, was long ascribed in England to Sir Samuel Moreland; but Kircher has formally laid claim to it in his 'Musurgia;' however, the *stentorophonic* horn or tube of Alexander the Great claims primogeniture, as well as superior magnitude; for it is said he could give orders to his army, at the distance of one hundred stadia, which is above twelve English miles.—*Rees, Cyclopædia.*

Step. *v. n.* [A.S. *stæppan.*]

Into a great estate.

In scorn of your soft looks and tender age! *Cowley*
Home the swain retreats,
His flock before him *stepping* to the fold.
Thomson, Seasons, Summer.

In robe and crown the king *stept* down.

Singleton gallantly *stepped* forward to assist her, and by his aid she landed safely, and then acknowledged the courtesy with a smile.—*Hannay, Singleton Fontenoy*, b. ii. ch. ii.

Step. *s.*

1. Progression by one removal of the foot.

Thou sound and firm-set earth,
Hear not my *steps*, which way they walk.

You and your ways. *Id., Tempest*, iii. 3.

Those heights where William's virtue might have staid,
And on the subject world look'd safely down,
By Marlbro' pass'd, the props and *steps* were made
Sublimer yet to raise his queen's renown.
Prior, Ode to Queen Anne, xix.

It was a saying among the ancients, truth lies in a well; and, to carry on this metaphor, we may justly say, that logick does supply us with *steps*, whereby we may go down to reach the water.—*Watts.*

It is no wonder that the longest mathematical demonstration should be so much more easily constructed and understood, than a much shorter train of just reasoning concerning real facts. The former has been aptly compared to a long and steep, but even and regular, flight of *steps*, which tries the breath, and the strength, and the perseverance only; while the latter resembles a short, but rugged and uneven, ascent up a precipice, which requires a quick eye, agile limbs, and a firm step; and in which we have to tread now on this side, now on that—ever considering, as we proceed, whether this or that projection will afford room for our foot, or whether some loose stone may not slide from under us. There are probably as many *steps* of pure reasoning in one of the longer of Euclid's demonstrations, as in the whole of an argumentative treatise on some other subject, occupying perhaps a considerable volume.—*Archbishop Whately, Elements of Logic*, b. iv. ch. ii. § 5.

3. Quantity of space passed or measured by one removal of the foot.

The gradus, a Roman measure, may be translated a *step*, or the half of a passus or pace.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures.*

4. Small length; small space.

'Best have [the carriage] to the theatre at night,' Gray exclaims; 'it is but a *step* to the Wells, and we can walk there. I've got tickets for all. Be at Sadler's Wells at eleven.'—*Thackeray, Book of Snobs*, ch. xxxv.

From billiards to whist is but a *step*; and when a man gets to whist and five pounds on the rubber, my opinion is, that it is all up with him.—*Ibid.* ch. xliv.

7. Progression; act of advancing.

Newton.*

One injury is best defended by a second, and this by a third: by these *steps* the old masters of the palace in France became masters of the kingdom; and by these *steps* a general during pleasure might have grown into a general for life, and a general for life into a king.—*Swift.*

The querist must not proceed too swiftly towards the determination of his point, that he may with more ease draw the learner to those principles *step* by *step*, from whence the final conclusion will arise.—*Watts.*

A great nobleman, who had an estate of fifteen or twenty thousand pounds a year, and who commanded two or three boroughs, would no longer be able to put his younger son, his younger brother, his man of business, into Parliament, or to earn a garter or a *step* in the peerage by finding a seat for the Lord of the Treasury or an Attorney General.—*Macaulay, History of England*, ch. xxii.

Flow down, cold rivulet, to the sea,
Thy tribute wave deliver:
No more by thee my *steps* shall be,
For ever and for ever.
Flow, softly flow, by lawn or lea,
A rivulet then a river;
No where by thee my *steps* shall be
For ever and for ever. *Tennyson, A Farewell.*

9. Gait; manner of walking.

Sudden from the golden throne

We're in a perilous predicament,
And I should *take* no *step* without advice.
H. Taylor, Philip van Artevelde, Part I. ii. 4.

No wine, beer, or coffee could be sold without a license. It was rumoured that every person holding such a license would shortly be required to enter into the same engagements which had been imposed on public functionaries, or to relinquish his trade. It seems certain that, if such a *step* had been *taken*, the houses of entertainment and of public resort all over the kingdom would have been at once shut up by hundreds.—*Macaulay, History of England*, ch. viii.

Step-părent. *s.* Stepfather or stepmother.

Stepchildren are strangers to the succession of their *step-parents.—Brande and Cox, Dictionary of Science, Literature, and Art.*

Stépchild. *s.* Stepson or stepdaughter.

Stépdame. *s.* Stepmother.

His wanton *step-dame* loved him the more;
But when she saw her offer'd sweets refused,
Her love she turn'd to hate. *Spenser.*

A *step-dame* too I have, a cursed she,
Who rules my hen-peck'd sire, and orders me.
Dryden, Translation of Virgil, Eclogues, iii. 48.

Anybody would have guessed miss to have been bred up under the influence of a cruel *step-dame*, and John to be the fondling of a tender mother.—*Arbuthnot, History of John Bull.*

Stépdaughter. *s.* Female child of one parent, but not of both.

Stépfather. *s.* Mother's husband, who is not the father of the child or children, who suggest the second part of the term.

Stépmother. *s.* Father's wife who is not the mother of the child or children who suggest the second part of the term.

How should their minds chuse but misdoubt, lest this discipline, which always you match with divine doctrine as her natural and true sister, be found unto all kinds of knowledge a *step-mother?—Hooker, Ecclesiastical Polity.*

You shall not find me, daughter,
After the slander of most *step-mothers*,
Ill-eyed unto you. *Shakespear, Cymbeline*, i. 2.

Cato the elder, being aged, buried his wife, and married a young woman: his son came to him, and said, Sir, what have I offended, that you have brought a *step-mother* into your house? The old man answered, Nay, quite the contrary, son; thou pleasest me so well, as I would be glad to have more such.—*Bacon.*

'Fancy Singleton's talking to his *stepmother* without knowing her!' said Welwyn.—*Hannay, Singleton Fontenoy.*

Steppe. *s.* [?] In *Geography.*

The *steppes* of Russia are not unlike the heaths of Germany: being in part susceptible of cultivation, and affording pasturage for numerous herds belonging to nomadic tribes.—*Ansted, Geology.*

Far in the east of Europe, and on the borders of Asia, is the great Aralo-Caspian tract, a part of which, the Kirghis *steppe*, occupies nearly fifteen thousand square miles of almost unbroken surface, depressed nearly a hundred feet below the general level of the ocean. It is terminated by much loftier lands in Central Asia; but these decline towards the Arctic ocean, descending to the plains of Siberia, whose elevation is probably little greater than that of the European plain.—*Id., Elementary Course of Geology, Mineralogy, and Physical Geography*, p. 38; 1869.

Stépping *verbal abs.* Act of going forward by steps.

Though short he fall of old Corvino's age,
His *steppings* with the other's footsteps fit.
Dr. H. More, Song of the Soul, i. 2, 82.

Stéppingstone. *s.*

1. Stone laid to catch the foot, and save it from wet or dirt.

Like *steppingstones* to save a stride,
In streets where kennels are too wide. *Swift.*

Or from the bridge I leaned to hear
The milldam rushing down with noise,
And see the minnows everywhere
In crystal eddies glance and poise.
The late flag-flowers where they sprung
Below the range of *stepping-stones*,
Or those three chestnuts near, that hung
In masses thick with milky cones.
Tennyson, The Miller's Daughter.

2. Assistance to progress. *Metaphorical.*

Stépson. *s.* Male child of one parent, but not of both.

Stercoráceous. *adj.* [Lat. *stercus, stercoris* = dung.] Belonging to dung; partaking of the nature of dung.

Green juicy vegetables, in a heap together, acquire a heat equal to that of a human body; then a putrid *stercoraceous* taste and odour, in taste resembling putrid flesh, and in smell human fæces.—*Arbuthnot, On the Nature and Choice of Aliments.*

Stercorátion. *s.* Act of dunging; act of manuring with dung.

The first help is *stercoration*: the sheeps' dung is one of the best, and the next dung of kine, and that of horses.—*Bacon.*

Stercoration is seasonable.—*Evelyn, Kalendar.*

The exteriour pulp of the fruit serves not only for the security of the seed, whilst it hangs upon the plant, but, after it is fallen upon the earth, for the *stercoration* of the soil, and promotion of the growth, though not the first germination of the seminal plant.—*Ray, On the Wisdom of God manifested in the Works of the Creation.*

Stéreochrome, or **Stereochrómy.** *s.* [Gr. στερεὸς = solid, rigid + χρῶμα, -ατος = skin, complexion, colour.] Kind, variety, imitation of, substitute for, fresco; so called from the permanence, or fixation of the colours. A term of very recent origin; see Waterglass.

The intonaco may be three of fine quartz sand and one of lime, such as is used in fresco-painting. The design may be traced on the wall when properly hardened; but the wall should be moistened immediately before painting. The colours are applied, mixed with distilled water, not heavily or in any great body, but thinly hatched over the surface. When the picture is finished, the whole is fixed by an application of the so-called waterglass from a syringe made expressly for the purpose, called a sprinkler. The picture is thus indelibly fixed; hence the term *stereochromy.—Brande and Cox, Dictionary of Science, Literature, and Art.*

Stéreograph. *s.* Stereographic impression.

Photography and the stereoscope in all their subtle concert are inadequate to produce on a plane surface the endless variety of forms into which at once and in succession the surface of water is carved by the wind. The nearest approximation to such a representation at present achieved is a *stereograph* taken by the instantaneous process.—*C. M. Ingleby, Introduction to Metaphysics*, b. i. § 36, p. 30.

Stereográphic. *adj.* Connected with, relating to, constituted by, Stereography; delineated on a plane; done according to the rules of stereography.

The angles made by the circles of the sphere are equal to the angles made by their representatives in the *stereographic* projection.—*Reid, Inquiry.*

The reason of this is not far to seek; for both eyes receive nearly the same perspective when the two coins are binocularly united; and such difference as there may be cannot possibly be such as subsists between two *stereographic* perspectives of one symmetrical coin.—*C. M. Ingleby, Introduction to Metaphysics*, b. i. § 47, p. 45.

Stereógraphy. *s.* [Gr. γραφή = writing; γράφω = I write.] Perspective.

Stereography [is] that branch of solid geometry which demonstrates the properties and shows the construction of all regularly defined solids; it explains the method for constructing the surfaces on planes, so as to form the entire body itself, or to cover its surface; or, when the solid is bounded by plane surfaces, the inclination of the planes.—*Rees, Cyclopædia.*

Stereómeter *s.* [Gr. μέτρον = measure; μετρέω = I measure.] Instrument for the measuring of solids.

Say's *stereometer* was first described in the Annales de Chimie for 1797. An instrument on exactly the same principle was afterwards brought forward by Sir John Leslie under the name of Coinometer. —*Brande and Cox, Dictionary of Science, Literature, and Art.*

Stereómetry. *s.* [Gr. στερὸς = solid + μέτρον = measure, from μετρέω = I measure.] Art of measuring, principle of the measurement of, solid bodies.

Stéreoscope. *s.* [Gr. σκοπέω = I see, spy, descry.] Instrument for the exposition of the influence of binocular vision in determining the solidity of visible objects.

On the mode in which our notion of the solid forms and relative projection of objects is acquired, great light has been thrown by the interesting experiments of Professor Wheatstone. It seems perfectly evident, both from reason and experience, that the flat picture upon the retina, which is the immediate source of our sensation, could not itself convey to our minds any notion but that of a corresponding plane surface. In fact, any notion of solidity, which might be formed by a person who had never had the use of more than one eye, would entirely depend upon the combination of his visual and tactile sensations. But where both eyes are employed, it has been ascertained by Professor Wheatstone, that they concur in exciting the perception of solidity or projection, which arises from the mental combination of the two dissimilar pictures formed upon the two retinæ. It is easily shown that any near object is seen in two different modes by the two eyes. But it is capable of proof, that the mental association of the different pictures upon the two retinæ, does of itself give rise to the idea of solidity. This proof is afforded by Professor Wheatstone's ingenious instrument, the *stereoscope*, first described by him in 1838.—*Dr. Carpenter, Principles of Human Physiology*, p. 644.

We retain too many images; and they confuse each other. We want a mental *stereoscope* to reduce them to unity.—*Derwent Coleridge*, Note on p. 272 of *Notes Theological, Political, and Miscellaneous, by S. T. Coleridge*: 1853.

Professor Wheatstone, reasoning from this fact, concluded that if he could see two pictures of an object at once, and drawn exactly as they appear to each eye in binocular vision, they ought to blend into one, and that that one ought to appear perfectly solid as in nature. The practical result of this reasoning was the invention of the *stereoscope*, which verified the truth of the argument, and gave the most convincing proof, that it is by means of the double image that we are enabled to judge with the greatest accuracy of the distance and relief of objects placed before us.—*J. D. Morell, An Introduction to Mental Philosophy on the Inductive Method*, p. 143: 1852.

Stereoscópic. *adj.* Connected with, relating to, the stereoscope.

These observations will be found useful in obtaining *stereoscopic* views of the structures in carpentry and shipbuilding.—*Sir David Brewster, The Stereoscope*, p. 188: 1856.

Stereótomy. *s.* [Gr. τομὴ = section, cutting; from root of τέμνω = I cut.] Cutting bodies. See extract.

Stereotomy [is] the science of cutting solids to suit certain conditions required for their forms.—*Gwilt, Encyclopædia of Architecture.*

Stéreotype. *s.* [Gr. τύπος = type, standard, cast, mould.]

1. In *Printing.* Solid plate of fixed type.
2. System of printing from immovable type.

There is some probability that this art originated in China, where it was practised long before it was known in Europe. Some European traveller might have imported the hint. That the Romans did not practise the art of printing cannot but excite our astonishment, since they really possessed the art, and may be said to have enjoyed it, uncenscious of their rich possession. I have seen Roman *stereotypes*, or printing immoveable types with which they stamped their pottery. How in daily practising the art, though confined to this object, it did not occur to so ingenious a people to print their literary works, is not easily to be accounted for.... Our modern *stereotype* consists of entire pages in solid blocks of metal, and, not being liable to break like the soft wood at first used, is profitably employed for works which require to be perpetually reprinted,—*I. Disraeli, Curiosities of Literature, Early Printing.*

Used *adjectivally.*

On pouring *stereotype* metal into this mould, a curved plate was obtained, which after undergoing a certain amount of trimming at two machines, specially made for the purpose, one for squaring the plate while being picked, the other for planing the back, could be taken to press and set to work within twenty-five minutes from the time at which the process began.—*R. J. Courtney*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Stéreotype. *v. a.* Cast solid plates in moulds taken from movable types.

Stereotyping by this process is very simple. A page of any work proposed to be *stereotyped* is set up with movable types, in the ordinary way. A plaster cast is then taken from it, which, being first dried, is immersed in fluid metal. The plaster used for forming the mould is pulverised gypsum, mixed with water to the consistence of cream.... After the form of types has been surrounded with a brass frame, and slightly oiled on the surface, the fluid plaster is poured upon it, and, by the application of a brush, made to fill every cavity of the letters, the superfluous portion being scraped off. When the plaster has set sufficiently hard, it is by means of the frame lifted off the face of the type and detached from it. It is then baked to dryness in an oven; and when quite hot it is placed in an iron box or casting pot, which has also been heated in an oven. The box is now plunged into a large pot of melted type metal, and kept about ten minutes under the surface, in order that the weight of the metal may force it into all the finer parts of the letters. The whole is then cooled; the mould is broken and washed off; and the back of the plate turned smooth on a lathe, or planed by a machine. The cast or plate, after being sufficiently cooled, is carefully examined with a view to removing any imperfections previous to its being printed from.—*R. J. Courtney*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Stéreotyping. *s.* Process by which anything is stereotyped: (used *adjectivally* in the extract).

The *stereotyping* process by which the rapid printing of newspapers is effected is an improvement hardly inferior to that by which the late Mr. Walter applied steam power to the printing press, and certainly equal to that by which the rotary press superseded the reciprocating action of the flat machine.—*R. J. Courtney*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Stérile. *adj.* [Lat. *sterilis.*] Barren.

Our elders say,
The barren, touched in this holy chase,
Shake off their *sterile* curse.
Shakespear, Julius Cæsar, i. 2.

To separate seeds, put them in water: such as are corrupted and *sterile* swim.—*Sir T. Browne, Vulgar Errours.*

She is grown *sterile* and barren, and her births of animals are now very inconsiderable.—*Dr. H. More, Antidote against Atheism.*

When the vegetative stratum was once washed off by rains, the hills would have become barren, the strata below yielding only mere *sterile* and mineral matter, such as was inept for the formation of vegetables.—*Woodward.*

Sterílity. *s.* [Fr. *stérilité*; Lat. *sterilitas, -atis.*] Barrenness; want of fecundity; unfruitfulness.

Spain is thin sown of people, by reason of the *sterility* of the soil, and because their natives are exhausted by so many employments in such vast territories.—*Bacon, Considerations on War with Spain.*

An eternal *sterility* must have possessed the world, where all things had been fastened everlastingly with the adamantine chains of specifick gravity, if the Almighty had not said, Let the earth bring forth grass, the herb yielding seed, and the fruit-tree yielding fruit.—*Bentley, Sermons.*

He had more frequent occasion for repetition than any poet; yet one cannot ascribe this to any *sterility* of expression, but to the genius of his times, which delighted in these reiterated verses.—*Pope, Essay on Homer.*

Stérilize. *v. a.* Make, or render, barren; deprive of fecundity, or the power of production.

May we not as well suppose the *sterilizing* the earth was suspended for some time, till the deluge became the executioner of it?—*Woodward, Natural History.*

Go! *sterilize* the fertile with thy rage. *Savage.*

Stérling. *adj.* [often, perhaps generally, postpositive; as, 'so many pounds *sterling*,' in which case the sense is, to some extent, *adverbial.* For the views respecting its derivation see the extracts illustrative of the question.]

1. Term by which genuine English money is discriminated.

The king's treasure that he left at his death amounted unto eighteen hundred thousand pounds *sterling*.—*Bacon, History of the Reign of Henry VII.*

Several of them would rather chuse to count out a sum in sesterces than in pounds *sterling*.—*Addison.*

2. Genuine; having past the test.

There is not one single witty phrase in this collection, which hath not received the stamp and approbation of one hundred years: he may therefore be secure to find them all genuine, *sterling*, and authentick.—*Swift, Polite Conversation.*

Do these foreign contemporaries of ours still exhibit, in their characters as men, something of that *sterling* nobleness, that union of majesty with meekness, which we must ever venerate in those our spiritual fathers?—*Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Some have said esterling money to take that name of a *starre*, stamped in the border or ring of the pennie; some other of a bird called a stare or *starling*, stamped in the circumference.—*Stow, London*, pp. 42-43. (Nares by H. and W.)

When a given weight of gold or silver is of a given fineness, it is then of the true standard, and called *esterling* or *sterling* metal; a name for which there are various reasons given, but none of them satisfactory; and of this *sterling* or *esterling* metal, all the coin of the kingdom must be made, by the statute 25 Edw. III. c. 13. So that the king's prerogative seemeth not to extend to the debasing or inhancing the value of the coin, below or above the *sterling* value: though Sir Matthew Hale appears to be of another opinion.... The most plausible opinion seems to be that adopted by those two etymologists, that the name was derived from the *esterlings* or *easterlings*, as those Saxons were anciently called, who inhabited that district of Germany, now occupied by the Hanse-towns and their appendages, the earliest traders in modern Europe.—*Sir W. Blackstone, Commentaries on the Laws of England*, b. i. ch. vii.

Sterling was the epithet for silver money current within this kingdom, and took its name from this: that there was a pure coin stamped first in England by the *Easterlings*, or merchants of East Germany, by the command of King John; and Hoveden writes it *Esterling*. Instead of the pound *sterling*, we now say so many pounds of lawful English money; but the word is not wholly disused, for though we ordinarily say lawful money of England, yet in the Mint they call it *sterling* money; and when it was found convenient in the fabrication of monies, to have a certain quantity of baser metal to be mixed with the pure gold and silver, the word *sterling* was then introduced; and it has ever since been used to denote all certain proportion or degree of fineness, which ought to be retained in the respective coins.—*Jacob, Law Dictionary.*

Sterling [was] originally the name of an English penny, the standard coin in which it was commonly stipulated that payments should be made; it was subsequently applied to the coinage of England in general, and metaphorically came to signify, of standard value, genuine, sound.... The origin of the name is unknown. Some suppose it to be from the coin having had a star on the obverse, the objection to which is that there is no evidence of any coin in which the star occupied a place sufficiently marked to give a name to the coin. There are, indeed, pennies of King John on which there is a star or sun in the hollow of a crescent, with other emblems, but it is a very inconspicuous object. Others suppose that the name was given to coins struck at *Stirling* in Scotland. But the hypothesis most generally approved is, that the coin was named from the *Easterlings*, or North Germans, who were the first moneyers in England.—*Wedgwood, Dictionary of English Etymology.*]

Stérling. *s.* [from the *adjective.*]

1. English coin; money.

This visionary various projects tries,
And knows that to be rich is to be wise:
By useful observation he can tell
The sacred charms that in true *sterling* dwell;
How gold makes a patrician of a slave,
A dwarf an Atlas, a Thersites brave. *Garth.*

Great name, which in our rolls recorded stands,
Leads honours, and protects the learned bands,
Accept this offering to thy bounty due,
And Roman wealth in English *sterling* view.
C. Arbuthnot.

Stérnpost. *s.* In *Navigation.* Upright timber forming the after-end of the ship.

Stérnum. *s.* [Lat. from Gr. στέρνον.] Breast-bone.

In Mammalia, the *sternum* is generally simple, and consists of a single chain of ossicles, except in the orang-utan, and occasionally in man, where a double series of ossifications are originally developed in the body of the bone, but which afterwards become confluent. The upper portion, or manubrium sterni, remains long distinct from the main body of the *sternum*; in man the cartilaginous appendage of the lower edge of the *sternum* is called xiphoid or ensiform.—*Owen*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Sternutátion. *s.* [Lat. *sternutatio.*] Act of sneezing.

The facetious clerk, Snigg, awoke at this moment, tolerably refreshed by his slumber, and wiped away a kind of apoplectic foam that used to gather about his lips during his *stertorous* snooze. Indeed, Sniggs being seized with apoplexy was a thing confidently expected by the mess, facetiously alluded to by many, and rather wished for, as a lark, by some.—*Hannay, Singleton Fontenoy.*

Sterve. See Starve.

Stethómeter. *s.* [Gr. μετρέω = I measure; μέτρον = measure.] In *Medicine.* Instrument for measuring the capacity, and determining the form, of the chest.

The amount of motion in the chest and abdomen, and of its various parts, is capable of being accurately determined by means of the chest-measurer of Dr. Gibson or the *stethometer* of Dr. Quain. Both instruments are composed of a brass box, having a dial and an index, which is moved by a rack attached to a prolonged pinion or a string. One revolution of the index indicates an inch of motion in the chest; the intervening space being graduated. It has been found necessary, when making observations on the respiratory movements, whether of the chest or of the abdomen, to divert the patient's attention, and make him look straightforwards, otherwise these movements become so affected as to vitiate the results.—*J. H. Bennett, Lectures on Medicine*, p. 45.

Stéthoscope. *s.* [Gr. στῆθος = breast, chest + σκοπέω = I see.] In *Medicine.* Instrument for conducting the internal sounds of the body to the ear of one who listens with the view of ascertaining how far those vital processes which are attended with sound are healthy and normal, or morbid and irregular. Of these the respiratory sounds of the lungs, and the circulational sounds of the heart are the chief, and as both are referred to the chest, the name *stethoscope* applies to the instrument which investigates them. Other sounds, however, beyond the chest may be investigated by the same, or a similar, instrument; e.g. the circulation of the gravid uterus, as well as that of the fœtus.

When the ear or the *stethoscope* rested gently upon the præcordial region, no unnatural sound whatever was heard. But when either the ear or the *stethoscope* was applied with such force as to cause the ribs to sink below their natural level, then a loud bellows-murmur sprang up. The space at which it was heard, and not beyond it, was just as far as the mouth of the *stethoscope* covered, when it was placed upon the cartilage of the third rib as a centre.—*Dr. P. M. Latham, Diseases of the Heart.*

Stethoscópic. *adj.* Connected with, relating to, determined by, the stethoscope: (as, 'a *stethoscopic* examination').

In some ancient Greek New Testaments, at the close of the Epistles, there were some numeral letters added, signifying how many *stichs* were in the Epistle. What these *stichs* were the learned Suicerus informs us. A *stich* in poetry was a verse, whatsoever kinds or parts it may consist of: a verse is a measured line, whether it be iambick, heroick, or any other length. In rural affairs, a *stich* is an order or rank of trees; and a verse a furrow, or as much as the plowman turns up in one line. In military matters it is an order of ten men. This term is used in numbering the books of Scripture. Verses are applied to prose as well as metre, and were distinguished by great letters or arithmetical notes. The Jewish and Christian writers have computed these *stichs* in Scripture books, and have added them at the end of each book. Suicerus endeavours to show, by sundry instances, that a *stich* is not a line, but a sentence or part of it, either comma, or colon; and that it answers to a verse in our Bible.—*Mather, Vindication of the Holy Bible*, p. 67: 1720.

Stifle. *v. a.* [Fr. *étouffer*; connected with *stop*, *stuff*, &c.]

1. Oppress or kill by closeness of air; suffocate.

Could not be wedged in more; I am *stifled*
With the mere rankness of their joy.

3. Extinguish by hindering communication.
These mansions, only used for storehouses, were dark and dull, and, being filled with wool and cotton, and the like—such heavy merchandise as *stifles* sound and stops the throat of echo—had an air of palpable deadness about them which, added to their silence and desertion, made them very grim.—*Dickens, Martin Chuzzlewit*, ch. ix.

4. Extinguish, or suppress, by artful and gentle means.
Every reasonable man will pay a tax with cheerfulness for *stifling* a civil war in its birth.—*Addison, Freeholder.*

5. Suppress; conceal.

3. In *Biology*. Mark, or point in general: (common in the plural form, *stigmata*).

a. In *Botany*. Apex of the style.
The filaments, antheræ, and *stigmata* of flowers, bear no more resemblance to the young plant, or even to the seed, which is formed by their intervention, than a chisel or plane does to a table or chair. What then are the filaments, antheræ, and *stigmata* of plants, but instruments so called?—*Paley, Natural Theology*, ch. iv.
The surface of all parts of plants (except the spongiolas and some *stigmata* to be described hereafter) is covered, at least when young, with a thin skin, which may easily be detached, especially from the leaves, and most readily after these organs have been allowed to macerate for a few days in water.—*Henslow, Principles of Descriptive and Physiological Botany*, pt. i. sect. i. § 29.
The *stigma* is the upper extremity of the style, without epidermis: in consequence of which it has almost uniformly either a humid or papillose surface. In the first case it is so in consequence of the fluids of the style being allowed to flow up through the intercellular passage of the tissue, there being no cuticle to repress and conceal them; in the latter case the papillæ are really the rounded sides of vesicles of cellular tissue. When perfectly simple, it is usually notched on one side, the notch corresponding with the side from which the placenta arises. See the *stigma* of Rosa, Prunus Pyrus, and others. If it belongs to a single carpel, it is either undivided, or its divisions, if any, are placed side by side, as in Spurgeworts, Euphorbiaceæ, Crocus, &c.; but if it is formed by the union of the *stigmas* of several carpels, its lobes are either opposite each other, as in Mimulus, or placed in a whorl as in Geranium. Such being the case, it is a general law that an apparently simple ovary, to which more than two opposite *stigmas* belong, is really of a compound nature; but when the *stigma* of a simple carpel is two lobed, the arms are often placed exactly opposite each other, as in composites, grasses, &c., and then the apparent number of the *stigmas* is not the real number.—*Lindley, Introduction to Botany*, p. 367.

b. In *Entomology*. Breathing-pore.
We now come to a class of Articulata in which the highest problem of animal mechanics is solved, and the entire body and its appendages can be lifted from the ground and be propelled through the air. The species which enjoy this swiftest mode of traversing space breathe the air directly: but their organs of respiration are peculiarly modified in relation to their powers of locomotion: they consist of innumerable tracheæ commencing from lateral pores called *stigmata*, or by anal tubes, which are ramified through and over every tissue and organ of the body.—*Owen, Lectures on Comparative Anatomy, Insecta*, lect. xvi.

Stigmatic. *adj.* Branded, or marked, especially in token of infamy or disgrace: (in the extract with *the*, and used as a *substantive*).

Scott, Kenilworth*, ch. xxvii.
On this occasion his [Bishop Burnet's] fortitude seems to have failed him. To be *stigmatized* by the popular branch of the legislature as a teacher of doctrines so servile that they disgusted even Tories, to be joined in one sentence of condemnation with the editor of Filmer, was too much.—*Macaulay, History of England*, ch. xix.

Stint. *s.* [*stunt, stunted* = small.] In *Ornithology.* Native bird of the genus Tringa (species minuta and Temminckii); little stint; little sandpiper.

The little sandpiper, or little *stint*, as it is also called, from its diminutive size, goes through seasonal changes of colour in its plumage, like those observed to take place in the curlew, sandpiper, and the knot, already described; but is more common in autumn than at any other period of the year. The species was first mentioned by Pennant as a British bird from a specimen killed in Cambridgeshire, and is most frequent on the southern and eastern shores of this country.... This diminutive *stint*, named after M. Temminck, is still smaller in size than the little *stint* last described, and is the smallest of the British sandpipers. It is also much more rare than the little *stint*, and somewhat different in its habits, frequenting the borders of rivers and fresh-water lakes at a distance from the coast, like our common sandpiper, T. hypoleucos; but is sometimes found on the sandy or muddy creeks and shores of the sea.—*Yarrell, History of British Birds.*

Stíppled. *part. adj.* Worked in Stippling.

The interlaying of small pieces cannot altogether avoid a broken, *stippled*, spotty effect: it cannot be alive. As it is strong and hard, we can tread it under foot on a pavement, and it is still bright as ever: but in the church, the hall, or the chamber, it is an enamelled wall—but it is a wall; splendid decoration, but aspiring to none of the loftier excellences of art.—*Milman, History of Latin Christianity*, b. xiv. ch. x.

Stíppling. *verbal abs.* See extract.

Stippling is a mode of engraving on copper by means of dots; and is contradistinguished by this word *stippling* from that mode of art which consists of courses of continued lines. The dots in stippled engravings are either round, that is to say, each dot forms a small cone in the copper, whose apex is downwards, or they are triangular, each dot forming a peak, or small isosceles triangle, on the surface of the plate; or when the dot consists of more than one of these peaks, as is commonly the case in engraving in the chalk manner, its form is of course multangular. The round dots in *stippling* are performed by means of a dry needle or an etching point, and the angular dots by means of that well-known steel instrument which is termed a graver. *Stippling* with a graver is also much used in the art of engraving on wood.—*Rees, Cyclopædia.*

Stípule. *s.* [Lat. *stipula* = straw.] In *Botany.* Leaf, leaflet, or representative of a leaf, at the base of a leaf-stalk.

When the rudimentary leaf of Liriodendron tulipifera is like a small cone, there is no trace of any lateral inequality. The base of the cone is afterwards seen to extend obliquely on each side on the axis of the bud; these extensions finish by forming two projecting tumours which cover the top of the axis in such a way that their edges touch one another on the side opposite the apex of the leaf. These two tumours are nothing but the *stipules.* If the entire organ is now isolated, an incompletely closed spur is obtained, the top of which corresponds with the apex and lamina of the leaf, while the edges represent the *stipules.* On unrolling this leaf and its *stipules*, a lyre is obtained, the petiole being still imperceptible.—*Lindley, Introduction to Botany.*

Stipules, in Botany, [are] small scales or appendages situated on each side, at the base of the petioles or leaf-stalks, most commonly of a less firm texture than the latter, and having a subulate termination.—*C. W. Johnson, Farmer's Cyclopædia.*

Creasy, History of England*, pt. i. ch. xi.

Stípulated. *part. adj.* Determined by stipulation; agreed on.

He asserts, as a known historical fact, that the kingdom of Spain had formerly belonged, by special right, to St. Peter; and by virtue of this imprescriptible claim, he grants to a certain count de Rouci all territories which he should reconquer from the Moors, to be held in fief from the Holy See by a *stipulated* rent.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. vii.

The vast acquisitions of landed wealth made for many ages by bishops, chapters, and monasteries, began at length to excite the jealousy of sovereigns. They perceived that, although the prelates might send their *stipulated* proportion of vassals into the field, yet there could not be that active co-operation which the spirit of feudal tenures required, and that the national arm was palsied by the diminution of military nobles.—*Ibid.*

Stipulátion. *s.* Bargain.

Neither is his manner of mounting unseemly, though he lack *stirrups*; for in his getting up, his horse is still going, whereby he gaineth way: and therefore the *stirrup* was called so in scorn, as it were a stay to get up, being of the old English word *sty*, which is to get up, or mount.—*Spenser.*

As we follow the stream of time backwards towards its source, it is natural that the differences, not only of dialect, but even of language, should become less and less; so that what are now distinct main branches of one great *stock*, may at a very remote period have formed the as yet undivided elements of one common trunk.—*Arnold, History of Rome*, ch. xxiv.

8. Quantity; store; body.

9. Cattle.

In the phraseology of agriculturists, the animals maintained on the farm are called live *stock*, the implements and carriages dead *stock*. . . . In one particular only, that of sheep, is Great Britain on a general level with other countries. There is nearly a sheep to every head of population. But of horned cattle there is only one to about every five; of pigs, one only to every nine. Were the amount of horned cattle in France proportionate only to that of Great Britain, France would have a little more than 6,000,000; in fact, it has rather more than 14,000,000. The same may be said of Austria. In many of the German states the proportion is higher still. In Denmark the cattle are not very much less numerous than the population. In the United States there is rather more than one head to every two of population. In France and Prussia, pigs are one to seven; in Austria, one to four and a half. Taking the whole of Europe, the proportion is one to six. In the United States there are more pigs than population. Had the returns supplied us with information as to poultry, the deficiency of Great Britain would have been still more striking. In the year 1865 this country imported more than 400,000,000 eggs, if the hundred of eggs be taken, as it has been from the earliest time, at 120. This deficiency is not greatly supplemented by importation. Small as the *stock* of cattle is, the annual importations do not amount to more than one-twentieth of the ordinary *stock*, while that of sheep is, as a rule, but one-fiftieth. During the present year even these quantities must have undergone a serious diminution. Nor is the import of meat large. The most important item is that of bacon. But even here the largest estimate will not give more than the equivalent of 300,000 pigs. The beef seems to be about equal to the supply of 50,000 oxen.—*J. E. T. Rogers*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

10. Government scrip.

The language of the Stock Exchange is eminently metaphorical. . . . Bull [is] a person who buys *stock* on account, not intending to hold it, but simply, at a date agreed on between the dealers, to pay or receive the difference between the price at which he values it, and that at which it actually stands on the day specified.—Bear [is] a person who sells *stock* on account on the same terms, and with the same purpose.—Lame Duck [is] a defaulter at the settlement of such bargains, whose name is exposed on the pillory of the Stock Exchange, the dreaded black board.—Backardation [is] a consideration given to keep back the delivery of *stock*, when the price is lower for time than for money.—Continuation or contango is the premium given when the price of funds in which a person has a jobbing account open, is higher for time than for money, and the settling day is arrived, so that the *stock* must be taken at a disadvantage. In this case a per centage is paid to put off the settlement and continue the account open.—Jobber [is] a term applied to those who accommodate buyers and sellers of *stock* with any desired quantity.—*J. E. T. Rogers*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

A deep fosse, or ditch, was drawn round the whole building and filled with water from a neighbouring stream. A double *stockade*, or palisade, composed of pointed beams, which the adjacent forest supplied, defended the outer and inner bank of the trench. There was an entrance from the west through the outer *stockade*, which communicated by a drawbridge, with a similar opening in the interior defences. Some precautions had been taken to place those entrances under the protection of projecting angles, by which they might be flanked in case of need by archers or slingers.—*Sir W. Scott, Ivanhoe*, ch. ii.

In these terms the element *stock* is to be understood in the sense of stump or trunk, the part of the body left when the limbs are cut off.—*Wedgwood, Dictionary of English Etymology.*]

Used *adjectivally*, or as the *first element* in a *compound*.

This *stocking-frame*, which is the great implement of hosiery, is totally different from the rectangular decussation which constitutes cloth, as the slightest inspection of a stocking will show; for this, instead of having two distinct systems of thread, like the warp and the weft, which are woven together, by crossing each other at right angles, the whole piece is composed of a single thread united or looped in a peculiar manner, which is called *stocking-stitch*, and sometimes chain-work.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

His [Werner's] fundamental principle of morals we have seen in part already; it does not exclusively or primarily belong to himself; being little more than that high tenet of entire Self-forgetfulness, that merging of the Me in the Idea; a principle which reigns both in *stoical* and christian ethics, and is at this day common, in theory, among all German philosophers, especially of the transcendental class.—*Carlyle, Critical and Miscellaneous Essays, Writings of Werner.*

To Johnson life was as a prison, to be endured with faith; to Hume it was little more than a foolish Bartholomew-Fair show-booth, with the foolish crowdings and elbowings of which it was not worth while to quarrel.—*Ibid. Boswell's Life of Johnson.*

Fichte's metaphysical theory may be called in question, and readily enough misapprehended; but the sublime *stoicism* of his sentiments must find some response in many a heart.—*Ibid. State of German Literature.*

To throw in peace and charity.
Green, The Spleen: 1754.

b. In the furnace of a steam-engine.
(For extract see under Stoking.)

Stóking. *verbal abs.* See extract.

Stoking [is] the operation of replenishing a furnace with coal, and of keeping it in proper order, by clearing away the ashes and clinkers, so as to maintain a vigorous combustion. Much skill is needed to *stoke* the furnace of a steam boiler successfully; and one *stoker* will often be able to keep the steam well up when another of equal strength and diligence will fail altogether. One main indication to be fulfilled is to spread the coal evenly over the bars of the grate, and to leave no holes or open places in the fire, through which the cold air will rush, and diminish the temperature of the furnace.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Stómach. *s.* [Fr. *estomac*; Lat. *stomachus*.]
1. Digesting part of the intestinal canal.
This filthy simile, this beastly line,
Quite turns my *stomach*.
Pope, Epilogue to the Satires, dialogue ii.
The gastric juice, or the liquor which digests the the food in the *stomachs* of animals, is of this class. Of all menstrua it is the most active, the most universal. In the human *stomach*, for instance, consider what a variety of strange substances, and how widely different from one another it in a few hours reduces to one uniform pulp, milk, or mucilage.—*Paley, Natural Theology*, ch. vii.
The human *stomach* is a somewhat oblong and rounded membranous bag, situated in the epigastric region. It is largest on the left side (or cardiac end), and gradually diminishes towards the right or lower orifice, which is called the pylorus. Like the intestines, the *stomach* has three coats or membranes, connected together by cellular membrane. The exterior or peritonæal coat is a dense firm membrane; the internal or villous coat is soft, mucous, and vascular; the central coat is muscular, and the glands of the *stomach* are situated between it and the villous coat. The *stomach* is largely supplied with nerves, which come from the eighth pair and sympathetic. They are derived chiefly from the cæliac or solar plexus, and are accompanied by veins which empty themselves into the vena portæ. The lymphatics of the *stomach* proceed directly to the thoracic duct.—*Owen*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*
As the *first element* in a *compound*.

Or *stomach-qualm'd* at land, a dram of this
Will drive away distemper.
Shakespear, Cymbeline, iii. 4.
2. Appetite; desire of food.

That have abundance, and enjoy it not.
Ibid., Part II. iv. 4.
If you 've a *stomach*, a cold bake-meat's ready.
Massinger, A New Way to Pay Old Debts, i. 2.
As appetite or *stomach* to meat is a sign of health in the body, so is this hunger in the soul a vital quality, an evidence of some life of grace in the heart; whereas decay of appetite, and the no manner of *stomach*, is a most desperate prognostick.—*Hammond.*

Stómata. *s. pl.* [plural of the Gr. στόμα, -ατος = mouth.] In *Botany*. Small microscopic orifices in the surface of leaves; (the singular form is so rare, that it would be difficult to say what it is; *stoma*, however, is the only correct one, inasmuch as the final *t* is not found either in the nominative or the accusative case *singular*; *stomates* as a masculine form is, as στόμα is neuter, an impossible form; *stomatia*, from a singular *stomation*, is a better, though a different word. See extract from Lindley).
In most plants the cuticle has certain openings of a very peculiar character, which appear connected with respiration, and which are called *stomates*, *stomata*, or *stomatia*. *Stomates* are passages through the cuticle, having the appearance of an oval or circular space, in the centre of which is a slit that opens or closes according to circumstances, and lies above a cavity in the subjacent tissue.—*Lindley, Introduction to Botany*, b. i. ch. ii. sect. i.
In the flowering plants the perfect *stomata* appear as roundish or squarish chasms in the epidermal layer, occurring regularly at the meeting angles or sides of four, or more, epidermal cells.—*Griffith and Henfrey, Micrographical Dictionary.*

Stone. *s.* [A.S. *stán*.]
1. Mineral body, more or less compound and resistant, smaller in bulk than rocks, and larger than pebbles, earthy rather than metallic, and commoner than gems (*precious stones*). With all of these, however, the ordinary stone has a common general character. See extracts from Woodward and Hill.
Five sharp smooth *stones* from the next brook he chose,
And fits them to his sling. *Cowley, Davideis.*
Relentless time, destroying power,
Whom *stone* and brass obey. *Parnell.*
Stones are bodies insipid, hard, not ductile or malleable, nor soluble in water.—*Woodward, Method of Fossils.*
Stones are, the softer and the harder. Of the softer *stones* are, 1. The foliaceous or flaky, as talk. 2. The fibrose, as the asbestus. 3. The granulated, as the gypsum. Of the harder *stones* are, 1. The opake *stones*, as limestone. 2. The semi-pellucid, as agate. 3. The pellucid, as crystal and the gems.—*Sir J. Hill, Materia Medica.*
Of the philosopher's *stone*, he [Ashmole] says, he knows enough to hold his tongue, but not enough to speak. This *stone* has not only the power of transmuting any imperfect earthy matter into its utmost degree of perfection, and can convert the basest metals into gold, flints into *stone*, &c., but it has still more occult virtues, when the arcana have been entered into, by the choice fathers of hermetic mysteries. The vegetable *stone* has power over the natures of man, beast, fowls, fishes, and all kinds of trees and plants, to make them flourish and bear fruit at any time. The magical *stone* discovers any person wherever he is concealed; while the angelical *stone* gives the apparitions of angels, and a power of conversing with them. . . . Ashmole, in one of his chemical works, prefixed a frontispiece, which, in several compartments, exhibited Phœbus on a lion, and opposite to him a lady, who represented Diana, with the moon in one hand and an arrow in the other, sitting on a crab; Mercury on a tripod, with the scheme of the heavens in one hand, and his caduceus in the other. These were intended to express the materials of the *stone*, and the season for the process.—*I. Disraeli, Curiosities of Literature, Alchymy.*
2. Piece of stone cut for building.
Should I go to church,
And see the holy edifice of *stone*,
And not bethink me straight of dang'rous rocks?
Which touching but my gentle vessel's ride,
Would scatter all her spices on the stream.
Shakespear, Merchant of Venice, i. 1.
The English used the *stones* to reinforce the pier.—*Sir J. Hayward.*
The contrast in this respect [durability], of the works of modern architects, especially in Great Britain, is very humiliating to those who boast so loudly of social advancement; for there is scarcely a public building of recent date which will be in existence one thousand years hence. Many of the most splendid works of modern architecture are hastening to decay, in what may be justly called the very infancy of their existence, if compared with the date of those erected in ancient Italy, Greece, and Egypt. This is remarkably the case with the three bridges of London, Westminster, and Blackfriars; the foundations of which began to perish most visibly in the very lifetime of their construc-

tors. Every *stone* intended for a durable edifice ought to be tested as to its durability, by immersion in a saturated solution of sulphate of soda, and exposure during some days to the air.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The *stonechat* has much the habits of the whinchat, frequenting commons and furzy places, where they sit upon the uppermost sprays, and dart at every fly that passes, frequently returning to the same place again like the flycatcher, to which they seem as nearly allied as the cold finch or pied flycatcher, insects and worms being their only food.—*Montagu, Dictionary of British Birds.*

This is pottery, properly so called; but it comprehends several subspecies, which are earthenware, *stoneware*, flintware, fayence, delftware, iron-stone china, &c. The earliest attempts to make a compact *stoneware* with a painted glaze, seem to have originated with the Arabians in Spain about the ninth century, and to have passed thence into Majorca, in which island they were carried on with no little success.—*Ure Dictionary of Arts, Manufactures, and Mines.*

Stool of Repentance, or *cutty stool*. Punishment in the discipline of the kirk of Scotland, somewhat analogous to the pillory. It is elevated above the congregation. In some places there may be a seat in it; but it is generally without, and the person stands therein who has been guilty of fornication, for three Sundays, in the forenoon; and after sermon is called upon by name and surname, the beadle or kirk-officer bringing the offender, if refractory, forwards to his post; and then the preacher proceeds to admonition. Here too are set to public view adulterers; only these are habited in a coarse canvas, analogous to a hairy or monastic vest, with a hood to it, which they call the sack or sackcloth, and that every Sunday throughout a year, or longer.

Stove is a fireplace, more or less close, for warming apartments. When it allows the burning coals to be seen, it is called a stove-grate. Hitherto *stoves* have rarely been had recourse to in this country for heating our sitting rooms, the cheerful blaze and ventilation of an open fire being preferred. When coke is burned very slowly in an iron box, the carbonic acid gas which is generated, being half as heavy again as the atmospherical air, cannot ascend in the chimney at the temperature of the 300° F.; but regurgitates into the apartment through every pore of the *stove*, and poisons the atmosphere. The large stoneware *stoves* of France and Germany are free from the vice; because, being fed with fuel from the outside, they cannot produce a reflux of carbonic acid into the apartment, when their draught becomes feeble, as inevitably results from the obscurely burning *stoves*, which have the doors of the fireplace and ash-pit immediately above the hearth-stone.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

1. Narrow long slip of cloth or leather.
These clothes are good enough to drink in, and so be these boots too; an they be not, let them hang themselves in their own *straps.*—*Shakespear, Twelfth Night*, i. 3.
I found but one husband, a lively cobbler, that kicked and spurred all the while his wife was carrying him on; and had scarce passed a day without giving her the discipline of the *strap.*—*Addison, Spectator.*
One word bred another, a shocking mishap;
She gave me the lie and I gave her the *strap.*
Song, probably founded on the prose extract.
Now don't let Satan ... take advantage of any one spot of rising ground to get astride of your imagination, if you can anyways help it; or if he is so nimble as to slip on—let me beg of you, like an unback'd filly, to frisk it, to squirt it, to jump it, to rear it, to bound it—and to kick it, with long kicks

and short kicks, till, like Tickletoby's mare, you break a *strap* or a crupper, and throw his worship into the dirt.—*Sterne, Tristram Shandy*, vol. iii. ch. xxxvi.

2. Specially as a part of dress; i.e. a short strap connecting the two sides of each leg of a pair of trowsers by passing under the shoe or boot, the object being to keep the trowsers well over the ankles; the use of which was more common in the last generation than in the present.

We then used to consider snobs raw-looking lads, who never missed chapel; who wore high-lows and no *straps*; who walked two hours on the Trumpington-road every day of their lives, who carried off the college scholarships, and who overrated themselves in hall. We were premature in pronouncing our verdict of youthful snobbishness. The man without *straps* fulfilled his destiny and duty. He eased his old governor, the curate in Westmoreland, or helped his sisters to set up the lady's school. He wrote a Dictionary, or a Treatise on Conic Sections, as his nature and genius prompted. He got a fellowship; and then took to himself a wife, and a living. He presides over a parish now, and thinks it rather a dashing thing to belong to the Oxford and Cambridge club; and his parishioners love him, and snore under his sermons. No, no, he is not a snob. It is not *straps* that make the gentleman, or high-lows that unmake him, be they ever so thick. My son, it is you who are the snob if you lightly despise a man for doing his duty, and refuse to shake an honest man's hand because it wears a Berlin glove. —*Thackeray, Book of Snobs*, ch. xv.

As the *second element* in a *compound*.

He walked into the market ... it was the same market as of old, crowded by the same buyers and sellers; brisk with the same business; noisy with the same confusion of tongues and cluttering of fowls in coops ... dainty with the same array in higglers' baskets of small shaving-glasses, laces, braces, *trowser-straps*, and hardware.—*Dickens, Martin Chuzzlewit*, ch. xxxvi.

Strap. *v. a.* Beat with a strap.

Strappádo. *s.* Kind of military punishment formerly practised in drawing up an offender to the top of a beam, and letting him fall; in consequence of which, dislocation of a limb usually happened.

Were I at the *strappado*, or all the racks in the world, I would not tell you on compulsion.—*Shakespear, Henry IV. Part I.* ii. 4.

Would you have him tortured?—I would have him proved.—
Rest try him then with goads, or burning irons;
Put him to the *strappado*. *B. Jonson, Volpone.*

They would meet every where with chains and *strappadoes*.—*Glanville, Sermons*, p. 213.

Strappádo. *v. a.* Punish, or torture, by the Strappado.

They had neither been haled into your gehenna at Lambeth, nor *strappadoed* with an oath ex officio by your bowmen of the arches.—*Milton, Animadversions upon a Defence of the Humble Remonstrance.*

Strápping. *adj.* Lusty; bulky; big; well-grown.

1. Artifice in war; trick by which an enemy is deceived.

See then as fine and cunning a *stratageme* as can be devised, for I hope I may be bold to use this word, seeing of late it hath found such good entertainment amongst us.—*Florio, World of Wonders*: 1608.

John Talbot, I did send for thee,
To tutor thee in *stratagems* of war.
Shakespear, Henry VI. Part I. iv. 5.

Ev'ry minute now
Should be the father of some *stratagem*.
Id., Henry IV. Part II. i. 1.

It seemeth reasonable, and in piety allowable, that *stratagems* and subtilties may be used in the war, yet with such caution, as the same may stand with fidelity and honour; for fraud being used, contrary to contracts and agreements made with the enemy, is mere treachery.—*Sir W. Raleigh, Arts of Empire*, ch. xxiii.

2. Artifice; trick by which some advantage is obtained.

Rouse up your courage, call up all your counsels,
And think on all those *stratagems* which nature
Keeps ready to encounter sudden dangers.
Sir J. Denham, The Sophy.

Those oft are *stratagems* which errours seem;
Nor is it Homer nods, but we who dream.
Pope, Essay on Criticism, i. 179.

Stratagémical. *adj.* [the full form would be *stratugematical*: see under Stratagem.] Having the character of a stratagem.

His wife, to gain entirely his affections, sent him this *stratagemical* epistle.—*Swift, in the Tripos assigned to him by Dr. Barret.*

Strátegy. *s.* Art of conducting a campaign.

On what principle then can it be maintained that he was at liberty to exercise the former power without consulting anybody, but that he was bound to exercise the latter power in conformity with the advice of a minister? Will it be said that an error in diplomacy is likely to be more injurious to the country than an error in *strategy*? Surely not.—*Macaulay, History of England*, ch. xvii.

Strath. *s.* [Welsh, *ystrad.*] Valley; bottom: (common in *geographical compounds*).

They dwelt in valleys or *straths*, bounded on each side by ridges of hills.—*Bishop Horsley's Biblical Criticism*, vol. iv. p. 468.

Avimore is situated in a narrow valley or *strath*, called *Strathspey*, from its being intersected by the river Spey.—*Garnett, Tour*, ii. 38.

Stratificátion. *s.* Arrangement of different matter; arrangement in beds or layers.

A mass in which there is no *stratification*.—*Dr. Hutton, Theory of the Earth*, ii. 307: 1796.

The first examination of structure, when a young geologist seeks to familiarise himself with the rocks of which the earth's surface is made up, brings to light a peculiarity which cannot fail to attract notice. It is the appearance of bedding, or *stratification*, presented in the great majority of cases, when the superficial coating of vegetable soil is removed, or a vertical section seen—an appearance indicating clearly the mechanical origin of the formation; or, on the other hand, when this is not the case, a peculiar crystalline structure is observable unaccompanied by any regular *stratification*, and apparently caused by the gradual cooling of a rock from a state of igneous fusion. Now it is one great object of a geologist, in making himself acquainted with the structure of a district not yet familiar to him, to determine the facts as to whether the rocks are stratified or unstratified; for upon this depends in a great measure their aqueous or igneous origin; and thus the result of a mere cursory and superficial observation becomes a step in the general classification of rocks.—*Ansted, Geology, Introductory, Practical, and Scientific*, pt. i. ch. i.

Strátified. *part. adj.* Ranged in beds, layers, or strata: (common in *Geology*, as applied to those portions of the earth's crust which overlie one another, the undermost being the oldest, and the uppermost the newest, like a series of sediments from water; sedimentary).

It requires but little study to discover that every one of the most common and daily operations is concerned more or less in the formation of *stratified* rocks.... Every shower of rain, ... every brook or river, ... every wave that dashes against a projecting rock on the sea-coast, or washes into a hollow bay, ... each ... is concerned in the formation of new strata.—*Ansted, Geology*, pt. i. ch. i.

Strátify. *v. a.* [Fr. *stratifier.*] Range in beds or layers.

Steel is made from the purest and softest iron, by keeping it red hot, *stratified* with coal-dust and wood-ashes, &c.—*Sir J. Hill, Materia Medica.*

Stratigráphical. *adj.* [Gr. γράφω = I write, describe; the result of its connection with the Latin *stratum* being a hybrid compound.] Arrangement, disposition, or classification, of anything, according to the stratum to which it belongs; e.g. in a geological collection when we find the remains of widely different plants or animals placed together because they occur in the same or similar strata, the disposition is *stratigraphical*, as opposed to *zoological* or *botanical*; these last being the terms applied when remains from different strata, but of the same genera or families, are associated on the strength of their structural affinities.

If our 'cold area' were to be raised above the surface, so that the deposit at present in progress upon its bottom should become the subject of examination by some geologist of the future, he would find this to consist of a barren sandstone, including fragments of older rocks, the scanty fauna of which would in great degree bear a boreal character; whilst if a portion of our 'warm area' were elevated at the same time *with the 'cold area,'* the geologist would be perplexed by the *stratigraphical* continuity of a cretaceous formation, including not only an extraordinary abundance of sponges, but a great variety of other animal remains, several of them belonging to the warmer temperate region, with the barren sandstone whose scanty fauna indicates a widely different climatic condition, which he would naturally suppose to have prevailed at a different period.—*Dr. Carpenter, On Deep-Sea Dredgings, Proceedings of the Royal Society*, December 17, 1868.

Stratócracy. *s.* [Gr. στρατὸς = army + κρατὸς = power. Contrast the *o* in the Greek with *i* in the Latin compound Stratify.] Military government.

Ever since the invasion of Kouli Khan, Indostan, from being a well-regulated government, became a scene of mere anarchy of *stratocracy*; every great man protecting himself in his tyranny by his soldiers.—*Guthrie, Geography, India.*

Strátum. *s.* [Lat. *stratus, -a, -um*; pass. part. of *sterno* = I strew.] Layer; (horizontal) extension of any material or substance of appreciable thickness, and with an approximate parallelism (this distinguishing it from a wedge) of its surfaces.

Another was found in a perpendicular fissure of a *stratum* of stone in Langron iron-mine, Cumberland.—*Woodward.*

We are thus led to regard the atmosphere of air ... as an aerial ocean, of which the surface of the sea and land constitutes the bed, and whose inferior portions or *strata*, within a few miles of the earth, contain by far the greater portion of the whole mass. ... It may therefore be considered as consisting of successively superposed strata or layers, each of the form of a spherical shell, concentric with the general surface of the sea and land, and each of which is rarer, or specifically lighter than that immediately beneath it; and denser, or specifically heavier than that immediately above it. This at least is the kind of distribution which alone would be consistent with the laws of the equilibrium of fluids above it.—*Sir J. Herschel, Outlines of Astronomy*, §§ 35–37.

Strata the *plural* form.

The terrestrial matter is disposed into *strata*, or layers, placed one upon another; in like manner as any earthy sediment, settling down from a fluid, will naturally be.—*Woodward.*

With how much wisdom are the *strata* laid,
Of different weight and of a different kind,
Of sundry forms for sundry ends design'd.
Sir R. Blackmore.

Straw. *s.* [A.S. *streow, streaw.*]

Tremble and start at wagging of a *straw*,
Intending deep suspicion.

And the strong lance of justice hurtless breaks;
Arm it in rags, a pigmy's *straw* doth pierce it.

Apples in hay and *straw* ripened apparently; but the apple in the *straw* more.—*Bacon, Natural and Experimental History.*

2. Anything proverbially worthless.

Thy arms, thy liberty, beside
All that's on th' outside of thy hide,
Are mine by military law,
Of which I will not bate one *straw*.
Butler, Hudibras, i. 3, 891.

'Tis not a *straw* matter whether the main cause be right or wrong.—*Sir R. L'Estrange.*

Why the deuce should Mrs. Botibol blow me a kiss? I would not kiss her for all the world. Why do I grin when I see her, as if I was delighted? Am I? I don't care a *straw* for Mrs. Botibol.—*Thackeray, Book of Snobs*, ch. xviii.

Stráwberry. *s.* [A.S. *straw-berie, streow-berie, streaw-berge.*—The import of the first syllable is uncertain; it has been connected with the verbs *stray* and *straggle*, from its runners, and with *straw*, from the habit of gardeners to lay it between the plants.] Plant and fruit of the genus Fragaria.

Content with food, which nature freely bred,
On wildings and on *strawberries* they fed.
Dryden, Translation from Ovid, The Golden Age.

Of the *strawberry* there are numerous sorts, by some botanists distinguished as species, by others considered as only varieties. Knight, (Hort. Trans. vol. iii. p. 307) considers the grandiflora or pine, the Chilensis or Chile, and the Virginiana or common scarlet (the first supposed to be a native of Surinam, the second of Chile, and the third of Virginia) to be varieties only of one species, as all may be made to breed together indiscriminately. The fruit has received its name from the ancient practice of laying

straw between the rows, which keeps the ground moist and the fruit clean. The cultivated *strawberries* are natives of temperate or cold climates, as of Europe and America. The fruit, though termed a berry, is in correct botanical language a fleshy receptacle studded with seeds.—*Loudon, Encyclopædia of Gardening.*

As the *first element* in a *compound*: (in the extracts the *strawberry-leaves* are those of the ducal coronet, with which the compound is nearly synonymous).

More than one of the other great 'civil and religious' families—the families who in one century plundered the church to gain the property of the people, and in another century changed the dynasty to gain the power of the crown—had their brows circled with the *strawberry-leaf*. — *B. Disraeli, Sybil*, b. i, ch. iii.

Lord Marney was spared the pang of the catastrophe.... he died in the full faith of dukism; worshipping the duke, and believing that ultimately he should himself become a duke. It was under all the circumstances a euthanasia; he expired leaning as it were on his white wand and babbling of *strawberry-leaves.—Ibid.*

Look at the Marquis of Carabas and his two carriages. My Lady Marchioness comes on board, looks round with that happy air of mingled terror and impertinence which distinguishes her ladyship, and rushes to her carriage, for it is impossible that she should mingle with the other snobs on deck. There she sits, and will be ill in private. The *strawberry-leaves* on her chariot-panels are engraved on her ladyship's heart.— *Thackeray, Book of Snobs*, ch. xxi.

Stráwberry-tree. *s.* Shrub so called from the likeness of its fruit to a strawberry, of the genus Arbutus (unedo); árbutus.

The arbutus, or *strawberry-tree*, is a native of Europe, Asia, and North and South America.... They are of easy culture, in sandy loam, or loam and peat; and they are readily propagated, the common kinds of layers, cuttings, or seeds, and the rarer and tenderer sorts, by grafting on those that are more common and hardy. All the species have the outer bark more or less tinged with red.—*Loudon, Arboretum et Fruticetum Britannicum.*

The only variety necessary to be enumerated in these pages is the Arbutus unedo, or *strawberry-tree*. The Greeks called this tree κόμαρος, and the fruit μιμαίκυλον; the Latins named the tree Arbutus; but in Pliny's time, when Rome abounded in wine and oil, they called the tree Unedo, which was an abridgement of 'Unum edo,' meaning 'You will eat but one.' It has the name of *strawberry-tree* with us, because its berries so nearly resemble in appearance that delicious fruit.—*C. W. Johnson, Farmer's Cyclopædia.*

Stráwbuilt. *adj.* Made up of straw.

Stróntia. *s.* In *Chemistry* and *Mineralogy*. Oxide of Strontium: (see extract).
   Strontia [is] an earth contained in a mineral, generally of a pale green tint and radiated crystalline texture, found at *Strontian* in Argyleshire. It is a carbonate of *strontia*. *Strontia* is the oxide of a metallic base, the properties of which are very imperfectly known, called *strontium*; the equivalent of *strontia*, or oxide of *strontium* (composed of 44 *strontium* and 8 oxygen), is 52. It has a caustic taste, an alkaline reaction, and a degree of solubility in water intermediate between lime and baryta. The salts of *strontia* are generally obtained by dissolving the natural or artificial carbonate in the acids; those which are soluble give the flame of burning bodies a fine rose-red colour: the nitrate of *strontia* is used for this purpose, and with beautiful effect, in theatrical exhibitions and fireworks. The sulphate of *strontia* is found native; it is an insoluble white powder when artificially prepared. Some of its native varieties have a pale blue tint, whence the term cælestine. Very beautiful crystals of this variety have been found in the new red marl of Clifton and in the neighbourhood of Bristol. A colourless prismatic crystalline variety, of great

beauty. is found associated with the native sulphur of Sicily.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Each strophe has a corresponding antistrophe, and when the system is complete, the pair are followed by an epode. This correspondence or correlation, is the fundamental element in the import of the word, which is sometimes used loosely for a long stanza.

The measure of verse used in the chorus is of all sorts, . . without regard had to *strophe*, antistrophe, or epode, which were a kind of stanzas framed only for the musick.—*Milton, Samson Agonistes*, preface.

I entered a gondola by moonlight: one singer placed himself forwards, and the other aft, and thus proceeded to St. Georgio. One began the song: when he had ended his *strophe* the other took up the lay, and so continued the song alternately. Throughout the whole of it, the same notes invariably returned, but, according to the subject-matter of the *strophe*, they laid a greater or smaller stress, sometimes on one, and sometimes on another note, and indeed changed the enunciation of the whole *strophe*, as the object of the poem altered.—*I. 4. Any particular kind of learning.

Studies serve for delight, for ornament, and for ability. Their chief use for delight is in privateness and retiring; for ornament, is in discourse; and for ability, is in the judgement and disposition of business.—*Bacon, Essays, Of Studies.*

This genius of thirty per cent. first had proved the decided vigour of his mind, by his enthusiastic devotion to his law *studies*: deprived of the leisure for *study* through his busy day, he stole the hours from his late nights and his early mornings; and without the means to procure a law-library, he invented a method to possess one without the cost; as fast as he learned, he taught, and by publishing some useful tracts on temporary occasions, he was enabled to purchase a library. He appears never to have read a book without its furnishing him with some new practical design, and he probably studied too much for his own particular advantage. Such devoted *studies* was the way to become a lord chancellor; but the science of the law was here subordinate to that of a money-trader.—*I. Miss Wirt, the governess, sate down to entertain us with variations on 'Such a gettin' up Stairs.' They were determined to be in the fashion. For the performance of 'Gettin' up Stairs,' I have no other name but that it was a *stunner*.... When she had banged out the tune slowly, she began a different manner of 'Gettin' up Stairs,' and did so with a fury and swiftness quite incredible. She spun up stairs; she whirled up stairs; she galloped up stairs; she rattled up stairs; and then, having got the tune to the top landing, as it were, she hurled it down again shrieking to the bottom floor, where it sank in a crash, as if exhausted by the breathless rapidity of the descent. Then Miss Wirt played the 'Gettin' up Stairs' with the most pathetic and ravishing solemnity; plaintive moans and sobs issued from the keys; you wept and trembled as you were gettin' up stairs. Miss Wirt's hands seemed to faint and wail, and die in variations. Again, and she went up with a savage clang and rush of trumpets, as if Miss Wirt was storming a breech. ... I wondered the windows did not crack and the chandelier start out of the beam at the sound of this earthquake of a piece of music. 'Glorious creature! Isn't she?' said Mrs. Ponto.—*Thackeray, Book of Snobs*, ch. xxv.

Pope, Dunciad, iv. 529.

A curious reader of history may discover the temporary and sometimes the lasting advantages of spreading rumours designed to disguise, or to counteract, the real state of things. Such reports, set a going, serve to break down the sharp and fatal point of a panic which might instantly occur; in this way the public is saved from the horrors of consternation, and the *stupefaction* of despair.—*I. Disraeli, Curiosities of Literature, Of False Political Reports.*

I find *stupendious* in Derham's Physico-Theology, 9th edit. p. 367. Perhaps it may be an error of the press.' If Mr. Pegge had turned to Milton's own editions of his poetry, he would have found the great poet writing the word *stupendious*; as others had done before him. This form continued also long after Milton's time: 'In such a *stupendious* manner.' (Bibliotheca Biblica, vol. i. p. 405: 1720).—*Todd.*

Stúrgeon. *s.* [Low Lat. *sturio, -onis*; the A.S. *styric, styrige*, was applied to the *porpoise.*] Cartilaginous fish of the genus Sturio.
It is part of the scutellated bone of a *sturgeon*, being flat, of a porous or cellular constitution on one side, the cells being worn down and smooth on the other.—*Woodward.*
That this is the ὀνίσκος of Doran, as quoted by Athenæus, is very probable, as well from the account he gives of its form, as of its nature. He says its mouth is always open, in which it agrees with the *sturgeon*; and that it conceals itself in the hot months: this shews it to be a fish of a cold nature, which is confirmed by the history of the European fish of this species, given by Mr. Forster, in his Essay on the Volga, who relates that they are scarcely ever found in that river in spring or summer, but in vast quantities in autumn and winter, when they crowd from the sea under the ice, and are then taken in great numbers. Whether the acipenser is the *sturgeon* of the moderns, may be doubted, otherwise Ovid would never have spoke of it as a foreign fish.... Caviare is made of the roes of this, and also of all the other sorts of *sturgeons*, dried, salted, and packed up close. The best is said to be made of those of the *sterlet*, a small species frequent in the Yaik and Volga. Icthyocolla, or isinglass, is also made of the sound of our fish, as well as that of the others, but the Beluga affords the best.—*Pennant, British Zoology.*
The *sturgeon* is occasionally taken on the East coast, and frequently brought to the London market from various localities. When caught in the Thames, within the jurisdiction of the lord mayor, it is considered a royal fish; the term being intended to imply that it ought to be sent to the king; and it is said that the *sturgeon* was exclusively reserved for the table of Henry the First of England.... It has long been noticed by the fishermen of the Solway Frith, that two species of *sturgeon* are occasionally entangled in their salmon-nets; the one with the blunt nose, and the other with a sharp one, the latter species being the more common of the two.—*Yarrell, History of British Fishes.*
A fine specimen of the blunt-nosed *sturgeon* was taken in the Frith of Forth in the month of July, 1835, and brought to the Edinburgh market for sale, the head of which I preserved. A few weeks after another was taken in the Tay, which differed in no respect from the former, except in sexual distinction.—*Parnell, Transactions of the Royal Society of Edinburgh*, vol. xiv.
Sturgeon [is] the type of a genus of cartilaginous fishes, with free gills, having the body more or less covered with bony plates in longitudinal rows. The mouth is placed beneath the snout, is small and edentulous, but protractile. Soft feelers or cirri are attached beneath the snout. The bodies of the vertebræ retain the primitive condition of an undivided gelatinous cord. The *sturgeons* ascend the larger rivers of Europe in great abundance. The flesh of most of the species is wholesome and agreeable food; their ova are converted into caviare, and their air-bladder affords the finest isinglass. The *sturgeon* which is occasionally captured on our east coast is the Acipenser sturio of Linnæus. By statute 16 Edw. II. c. 1, all *sturgeon*, wherever caught, are declared to vest in the crown by virtue of their dignity, and are to be delivered without purchase.—*Owen*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

2. Stuttering speech.
I ought to call on him; and, as I feel ashamed not to have done so before, I wish you would accompany me to his house. One happy word from you would save me a relapse into *stutter*. When I want to apologise I always *stutter*.—*Lord Lytton, What will he do with it?* b. vii. ch. xix.

Stútterer. *s.* One who stutters.
Stutterers use to stammer more when the wind is in that hole.—*Howell, Letters*, i. 1, 27.

May thy black pigs lie warm in little *sty*,
And have no thought to grieve them till they die.

Up to the clowdes. *Id., Muiopotmos.*

Sty, Stýan, Stythe. *s.* [Dutch, *stieg.*] Small boil, or pimple, on the margin of the eyelid, arising from inflammation of the parts about the roots of the eyelash and the Meibomian glands, the medical term being *hordeola*; supposed to be curable by rubbing with a ring, or some piece of gold: (in the extracts the allusion is to that kind of blindness or shortsightedness which required a bribe to relieve it).
I have a *sty* here, Chilax.—
I have no gold to cure it, not a penny.
Beaumont and Fletcher, Mad Lover, v. 4.
There is a *stie* grown o'er the eye o' th' Bull,
Which will go near to blind the constellation.—
Put a gold ring in 's nose, and that will cure him.
Id., Elder Brother, ii. 4. (Nares by H. and W.)

Stýca. *s.* [A.S.] Copper Saxon coin of the lowest value.

Stýgian. *adj.* Pertaining to Styx, one of the poetical rivers of hell.
At that so sudden blaze, the *Stygian* throng
Bent their aspect. *Milton, Paradise Lost*, x. 450.

Style. *s.* [Lat. *stylus*; from Gr. στύλος = pillar, column. In Forcellini the spelling is *stilus*, under which is found the reason for its being so: 'Græce columnam [στύλος] significat... cujus ratione sunt qui *stylus*

scribunt, quamquam cum in Latinam linguam vox translata sit, consuetudo obtinuit ut Latinis etiam literis scribatur.' How far this rule applies depends upon the extent to which a given word has been naturalised. That the word before us was so we learn from the quantity, which, though long in Greek, was short in Latin, at least when it signified a pen—'sæpe *stÿlum* vertas.' (Horace.) Even in Latin, however, the use of *y* is common, while in English it is predominant.]

1. Manner of writing with regard to language.

Happy is your grace,
That can translate the stubbornness of fortune
Into so quiet and so sweet a *style*.
Shakespear, As you like it, ii. 1.

Their beauty I will rather leave to poets, than venture upon so tender and nice a subject with my severer *style*.—*Dr. H. More.*

Proper words in proper places make the true definition of a *stile*.—*Swift.*

Let some lord but own the happy lines,
How the wit brightens, how the *style* refines!
Pope, Essay on Criticism, ii. 420.

The thirtieth section of Magna Charta had provided that foreign merchants should be free from all tributes, except the ancient customs; and it was strange to suppose that natives were excluded from the benefit of that enactment. Yet, owing to the ambiguous and elliptical *style* so frequent in our older laws, this was open to dispute, and could perhaps only be explained by usage.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

'Quam multa! quam paucis!' is a fine expression, which was employed to characterize a concise *style* pregnant with meaning.—*I. Disraeli, Curiosities of Literature, Some Ingenious Thoughts.*

In fact Horn's *style*, though extremely readable, has one great fault; it is, to speak it in a single word, an affected *style*. . . . In this *style* of 'witty and conceited mirth,' considerable part of the book is written.—*Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Upon the whole, it cannot be said that Milton's English prose is a good *style*. It is in the first place, not perhaps in vocabulary, but certainly in genius and construction, the most Latinized of English *styles*; but it does not merit the commendation bestowed by Pope on another *style* which he conceived to be formed after the model of the Roman eloquence, of being 'so Latin, yet so English all the while.' It is both soul and body Latin, only in an English dress. . . . Rich as his *style* often is, it never moves with any degree of rapidity or easy grace even in passages where such qualities are most required.—*Craik, History of English Literature*, vol. ii. p. 51.

2. Manner of speaking appropriate to particular characters.

No *style* is held for base, where love well named is.
Sir P. Sidney.

There was never yet philosopher,
That could endure the toothache patiently,
However they have writ the *style* of gods,
And made a pish at chance and sufferance.
Shakespear, Much Ado about Nothing, v. 1.

3. Mode of painting.

The great *stile* stands alone, and does not require, perhaps does not well admit, any addition from inferior beauties. The ornamental *stile* also possesses its own peculiar merit: however, though the union of the two may make a sort of composite *stile*, yet that *stile* is likely to be more imperfect than either of those which go to its composition.—*Sir J. Reynolds.*

4. Manner or mode of composition in music.

5. Title; appellation.

Ford's a knave, and I will aggravate his *stile*; thou shalt know him for knave and cuckold.—*Shakespear, Merry Wives of Windsor*, ii. 2.

The king gave them in his commission the *style* and appellation which belonged to them.—*Lord Clarendon, History of the Grand Rebellion.*

O virgin! or what other name you bear
Above that *style*, O more than mortal fair!
Let not an humble suppliant sue in vain.
Dryden, Translation of the Æneid, i. 451.

Propitious hear our prayer,
Whether the *style* of Titan please thee more,
Whose purple rays th' Achæmenes adore.
Pope, Translation of the First Book of the Thebaid of Statius.

6. Course of writing. *Rare.*

While his thoughts the ling'ring day beguile,
To gentle Arcite let us turn our *style*.
Dryden, Palamon and Arcite, ii. 33.

7. Pointed iron used anciently in writing on tables of wax.

When writing began to be common on tables of wood, covered over with coloured wax, men made use of a sort of bodkin, made of iron, or brass, or bone; which in Latin is called *stylus*:—As to the form of the *style*, it was made sharp like a pointed needle at one end, to write withal; and the other end blunt and broad, to scratch out what was written, and not approved of, to be amended; so that 'vertere stylum,' i. e. to turn the *style*, signifies, in Latin, to blot out.—*Massey, Origin of Letters*, p. 64.

They wrote with an iron bodkin, as they did on the other substances we have noticed. The *stylus* was made sharp at one end to write with, and blunt and broad at the other, to deface and correct easily; hence the phrase 'vertere stylum,' to turn the *stylus*, was used to express blotting out. But the Romans forbade the use of this sharp instrument, from the circumstance of many persons having used them as daggers. A schoolmaster was killed by the Pugillares or table-books, and the *styles* of his own scholars. They substituted a *stylus* made of the bone of a bird, or other animal; so that their writings resembled engravings. . . . By the word pen in the translation of the Bible, we must understand an iron *style*.—*I. Disraeli, Curiosities of Literature, Origin of the Materials of Writing.*

8. Anything with a sharp point, as a graver; pin of a dial.

Placing two *stiles* or needles of the same steel, touched with the same loadstone, when the one is removed but half a span, the other would stand like Hercules's pillars.—*Sir T. Browne.*

9. In *Botany*. See third extract.

Style is the middle prominent part of the flower of a plant, which adheres to the fruit or seed: 'tis usually slender and long, whence it has its name.—*Quincy.*

The figure of the flower-leaves, stamina, apices, *stile* and seed-vessel.—*Ray.*

The organs immediately within the petals are called *stamens*, which are considered the male apparatus of plants. . . . They consist of a bundle of spiral vessels surrounded by cellular tissue, called the filament, terminated by a cellular case, finally opening and discharging its contents called the anther. . . The organ which occupies the centre of a flower, within the *stamens* and disk, if the latter be present, is called the pistil. It is the female apparatus of flowering plants. . . . It consists of one or more carpels. . . . Each carpel is distinguishable into three parts; viz. the ovary, the *style*, and the stigma. . . . The *style* is the part which connects the ovary and stigma. It is frequently absent, and is no more essential to a pistil than a petiole to a leaf, or a filament to an anther.—*Lindley, Elements of Botany, Structural and Physical*, §§ 418, 474.

Style of court. Practice observed by any court in its way of proceeding.

Style. *v. a.* Term; name.

The chancellor of the exchequer they had no mind should be *styled* a knight.—*Lord Clarendon, History of the Grand Rebellion.*

May *stile* their own rewards.
Sir J. Denham, The Sophy.

His conduct might have made him *styled*
A father, and the nymph his child.
Swift, Cadenus and Vanessa.

Rome . . . was not a jot more invested with authority than any other city; the Greek capital had long taken her place. . . . Nor does it seem to me exceedingly material, if the case be such, that Charlemagne was not *styled* emperor of the West, or successor of Augustulus. It is evident that his empire, relatively to that of the Greeks, was western; and we do not find that either he or his family ever claimed an exclusive right to the imperial title.—*Hallam, View of the State of Europe during the Middle Ages*, ch. i. note x.

The political opinions predominant in the school were what in ordinary parlance are *styled* Tory.—*B. Disraeli, Coningsby*, b. i. ch. vii.

Surely to adopt healing measures; such as the magic of genius will unfold; such as, once sanctioned by notables, all parlements and all men must, with more or less reluctance, submit to.—*Carlyle, The French Revolution*, pt. i. b. iii. ch. ii.

Suásory. *adj.* Having a tendency to persuade.

Sub, in *Composition*, is Latin for *under*. It has two powers; i. e. may be adverbial rather than prepositional, in which case it signifies a *subordinate degree*, or *somewhat*; or it may be prepositional rather than adverbial, in which case it means *under*, as opposed to *over* or *on*, as *subaqueous, subjacent, submarine.*

Subácid. *adj.* Acid in a small degree.

Who else could not subsist, nor hope so much.

b. As a term in the Logic of Opposition. Agreeing, as a proposition, in quality, but differing in quantity: as, 'All A is B,' and 'Some A is B,' where both propositions are affirmative; and 'No A is B,' and 'Some A is not B,' where both are negative.

Two propositions are said to be opposed to each other, when, having the same subject and predicate, they differ in quantity or quality, or both. It is evident that with any given subject and predicate, you may state four distinct propositions, viz., universal affirmative, universal negative, particular affirmative, and particular negative, any two of which are said to be opposed; hence there are four different kinds of opposition, viz., the two universals are called contraries to each other; the two particular *subcontraries*; the universal and particular affirmatives or negatives, *subalterns*; and the universal affirmative and particular negative, or universal negative and particular negative, contradictories. . . . In ordinary language, however, and in some logical treatises, propositions which do not differ in quality (viz. *subalterns*), are not reckoned as opposed. . . . In *subalterns*, the truth of the particular (which is called the *subalternate*) follows from the truth of the universal (*subalternant*), and the falsity of the universal of the falsity of the particular: . . . *subalterns* differ in quantity alone; contraries, and also *subcontraries* in quality alone.—*Archbishop Whately, Elements of Logic*, b. ii. ch. ii. § 3.

Subinfeudátion. *s.* Subordinate infeudation, i.e. feudal tenure under one who was himself holding under a superior.

In England even the practice of *sub-infeudation* . . . was checked by Magna Charta, and forbidden by the statute 18 Edward I. called Quia Emptores. . . . A custom very similar in effect to *sub-infeudation* was the tenure by frérage, which prevailed in many parts of France. Primogeniture, in that extreme which our common law has established, was unknown, I believe, in every country upon the Continent. . . . In the early times of the feudal policy, when military service was the great object of the relation between lord and vassal, this, like all other *sub-infeudation*, was rather advantageous to the former. For when the homage of a fief was divided, the service was diminished in proportion. . . . Whatever opposition, therefore, was made to the rights of *sub-infeudation* or frérage would indicate a decay in the military character, the living principle of feudal tenure.—*Hallam, View of the State of Europe during the Middle Ages*, ch. ii. pt. i.

The spirit of a feudal monarchy, which compelled every lord to act by the advice and assent of his immediate vassal, established no relation between him and those who held nothing at his hands. They were included, so far as he was concerned, in their superiors; and the feudal incidents were due to him from the whole of his vassal's fief, whatever tenants might possess it by *sub-infeudation*.—*Ibid.*, ch. viii. pt. iii.

Subingréssion. *s.* [Lat. *ingredior* = I step in; pret. part. *ingressus*.] Secret, or imperfect entrance.

Subjacent. *adj.* [Lat. *subjacens, subjacentis*. The accent here is doubtful; the pronunciation *ádjacent* being more correct, and by no means uncommon. The form *adjácent* suggests that the *a* is long, which is erroneous. Whichever way we utter the word, we must remember that the Latin form is not *adjācens*, but *adjăcens*. *Mutatis mutandis*, this is what applies to, and has been said under, Adjacent.] Lying under.

The superficial parts of mountains are washed away by rains, and borne down upon the *subjacent* plains.—*Woodward.*

Súbject. *s.*

I will not venture on so nice a *subject* with my severe style.—*Ibid.*

Make choice of a *subject* beautiful and noble, which being capable of all the graces that colours, and elegance of design can give, shall afford a perfect art, an ample field of matter wherein to expatiate.—*Dryden.*

The *subject* of a proposition is that concerning which anything is affirmed or denied. — *Watts, Logick.*

My real design is, that of publishing your praises to the world; not upon the *subject* of your noble birth.—*Swift.*

3. That in which anything inheres or exists: (here is nearly an equivalent of the commoner term Substance.)

Anger is certainly a kind of baseness, as it appears well in the weakness of those *subjects* in whom it reigns, children, women, old folks, sick folks.—*Bacon, Essays, Of Anger.*

4. In *Logic.* One of the two terms by which, in conjunction with the copula, a proposition is constructed; and, of these two, the name of that object of thought concerning which the statement is made; the corresponding term, i.e. the word which delivers what the statement is, being the predicate; the copula telling us whether the two are or are not in agreement. In 'A is B,' or 'A is not B,' 'A' is the subject, 'B' the predicate, 'is' or 'is not' the copula.

Every proposition consists of a *subject* and a predicate. In English these are distinguished by their position, the *subject* standing first, the predicate last. 'Happiness is pleasure.' Here 'happiness' is the *subject*, 'pleasure' the predicate. If we change their order, and say 'Pleasure is happiness,' then 'pleasure' becomes the *subject*, and 'happiness' the predicate. In Greek these are distinguished not by any order or position, but by help of the article, which the *subject* always assumes, and the predicate in most instances (some few excepted) rejects.—*Harris, Hermes*, b. ii. ch. i.

A syllogism being resolvable into three propositions, and each proposition containing two terms; of these terms, that which is spoken of is called the *subject*; that which is said of it, the predicate; and these two are called the terms (or extremes) because, logically, the *subject* is placed first, and the predicate last, and in the middle the copula, which indicates the act of judgment, as by it the predicate is affirmed or denied of the *subject*. The copula must be either 'is' or 'is not;' which expressions indicate simply that you affirm or deny the predicate, or the *subject*. The substantive-verb is the only verb recognised by logic, inasmuch as all others are compound; being resolvable by means of the verb 'to be' and a participle or adjective; e.g. 'The Romans conquered.' The word 'conquered' is both copula and predicate, being equivalent to 'were (copula) victorious' (predicate).—*Archbishop Whately, Elements of Logic*, b. ii. ch. i. § 2.

5. In *Grammar.* Nominative case; i.e. the only case of a noun which can, *by itself*, constitute the subject of a proposition.

6. In *Mental Philosophy.* Active and immediate sentient or thinking element in the formation of a conception, notion, or idea, concerning something thought about, i.e. an Object. In this explanation the words *active* and *immediate* must not be neglected; inasmuch as, in a thought concerning another thought both elements are sentient; though only one (except, of course, so far as it is a cause of thought) is immediate and active. As Object and Subject are thus contrasted with, and complementary to, each other, Object and Objective are referred to; the extracts illustrating each other. Ego, too, is referred to; the only subject known primarily to the thinker being himself (i.e. myself, I, or Ego).

The thing which is not of the mind, and can be imagined to exist without the mind, is the object: the mind itself is called the *subject* of that object. Thus, even a relation between two minds may be an object to a third mind. Logic considers only the connexion of the subjective and objective; it treats of things 'non secundum se, sed secundum esse quod habent in animo.'—*De Morgan, Syllabus of a Proposed System of Logic*, § iv.

In analysing every intellectual act we necessarily make between ourselves, the conscious *subject*, and that of which we are conscious, the object. 'I know,' and 'something is known by me,' are convertible propositions; every mental act which is not thus resolvable belongs to the emotional part of our nature, as distinguished from the intelligent and percipient. For the distinction between *subject* and object, the neglect of which has been the cause of infinite confusion and perplexity, we are indebted to the schoolmen, from whom it was derived (through Wolf and Leibnitz) by Kant and the modern German philosophers.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

As the *first element* in a *compound*, or as *adjectival* in *construction* (with *matter*). Mass of materials upon which an opinion, delivered in a proposition, has to be formed; i.e. matter for which a predicate has to be found (i.e. something to be said about it), and also a copula stating whether the two terms agree or disagree. The sense of *subject* here is purely logical, dealing solely with *subject* as the name of a term in a proposition. In no case can it be treated as equivalent to Subjective.

I enter into the *subject matter* of my discourse.—*Dryden.*

Subjéct. *v. a.*

1. Put; place; lay under.

The medal, faithful to its charge of fame,
Through climes and ages bears each form and name:
In one short view, *subjected* to our eye,
Gods, emperors, heroes, sages, beauties lie.
Pope, Moral Essays, v. 31.

2. Reduce to submission; make subordinate; make submissive.

My nation was *subjected* to your lords;
It was the force of conquest; force with force
Is well ejected. *Milton, Samson Agonistes*, 1205.

3. Enslave.

I live on bread like you, feel want like you,
Taste grief, need friends, like you: *subjected* thus,
How can you say to me, I am a king?
Shakespear, Richard II. iii. 2.

I see thee, in that fatal hour,
Subjected to the victor's cruel power,
Led hence a slave. *Dryden,*
Last Parting of Hector and Andromache.

The blind will always be led by those that see, or fall into the ditch: and he is the most *subjected*, the most enslaved, who is so in his understanding.—*Locke.*

4. Expose; make liable, or obnoxious to anything.

If the vessels yield, it *subjects* the person to all the inconveniences of an erroneous circulation.—*Arbuthnot.*

5. Submit; make unaccountable.

God is not bound to *subject* his ways of operation to the scrutiny of our thoughts, and confine himself to do nothing but what we must comprehend.—*Locke.*

Before the conduct of the unlucky licenser had been brought under the consideration of Parliament, the Commons had resolved, without any division, and, as far as appears, without any discussion, that the Act which *subjected* literature to a censorship should be continued.—*Macaulay, History of England*, ch. xix.

6. Make subservient.

Man he made, and for him built
Magnificent this world, and earth his seat;
Him lord pronounced, and, O indignity!
Subjected to his service angel-wings.
Milton, Paradise Lost, ix. 152.

Subjécted. *part. adj.* In extract, subjacent.

Down the cliffe as fast
To the *subjected* plain.
Milton, Paradise Lost, xii. 639.

Subjéction. *s.*

1. Act of subduing.

After the conquest of the kingdom, and *subjection* of the rebels, enquiry was made who they were, that, fighting against the king, had saved themselves by flight.—*Sir M. Hale.*

2. State of being under government.

Because the *subjection* of the body to the will is by natural necessity, the *subjection* of the will unto God voluntary; we therefore stand in need of direction after what sort our wills and desires may be rightly conformed to his.—*Hooker, Ecclesiastical Polity.*

How hard it is now for him to frame himself to *subjection*, that, having once set before his eyes the hope of a kingdom, hath found encouragement.—*Spenser, View of the State of Ireland.*

Both in *subjection* now to sensual appetite.
Milton, Paradise Lost, ix. 1128.

Subjéctive. *adj.* Having the character of, relating to, connected with, constituted by, a subject.

1. As a subject in a political sense.

What eye can look, through clear love's spectacle,
On virtue's majesty that shines in beauty,
But, as to nature's divin'st miracle,
Performs not to it all *subjective* duty?
Sir J. Davies, Witte's Pilgrimage, sign. D. 2.

2. As a subject in logic and mental philosophy.

Certainty, according to the schools, is distinguished into objective and *subjective*: objective is when the proposition is certainly true in itself; and *subjective*, when we are certain of the truth of it.—*Watts.*

Kant ... declared that a science of existence was beyond the compass of our faculties: that pure reason, as purely *subjective*, and conscious of nothing but itself, was therefore unable to ensure the reality of aught beyond the phænomena of its personal modifications. ... In the philosophy of mind, *subjective* denotes what is to be referred to the thinking subject, the ego: objective what belongs to the object of thought, the non-ego. It may be safe, perhaps, to say a few words in vindication of our employment of these terms. ... The exact distinction of Subject and Object was first made by the schoolmen; and to the schoolmen the vulgar languages are principally indebted for what precision and analytic subtilty they possess. These correlative terms correspond to the first and most important distinction in philosophy; they embody the original antithesis in consciousness of self and not-self—a distinction which, in fact, involves the whole science of mind; for psychology is nothing more than a determination of the *Subjective* and the Objective in themselves, and in their reciprocal relations.—*Sir W. Hamilton, Discussions on Philosophy and Literature*, p. 5: 1853.

Th reader must ... bear in mind the distinction between relative and absolute motion ... if a spectator at rest view a certain number of moving objects, they will group and arrange themselves to his eye, at each successive moment in a very different way from what they would do were he in active motion among them. ... How is such a spectator to disentangle from each other the two parts of the apparent motions of these external objects,—that which arises from the effect of his own change of place, and which is therefore only apparent (or, as a German metaphysician would say, *subjective*, having reference only to him as perceiving it,)—and that which is real (or objective—having a positive existence, whether perceived by him or not)? By what rule is he to ascertain, from the appearances presented to him while himself in motion, what would be the appearances were he at rest? It by no means follows, indeed, that he would even then at once obtain a clear conception of all the motions of all the objects. The appearances so presented to him would have still something *subjective* about them.—*Sir J. Herschel, Outlines of Astronomy.*

The fundamental antithesis of philosophy of which I have to speak has been brought into great prominence in the writings of modern German philosophers, and has conspicuously formed the basis of their systems. They have indicated this antithesis by the terms *Subjective* and Objective. According to the technical language of old writers, a thing and its qualities are described as *Subject* and Attributes; and thus a man's faculties and acts are attributes of which he is the *Subject*. The mind is the *Subject* in which ideas inhere. Moreover, the man's faculties and acts are employed upon external objects; and from objects all his sensations arise. Hence the part of a man's knowledge which belongs to his own mind, is *Subjective*: that which flows in upon him from the world external to him, is Objective. And as in man's contemplation of nature, there is always some act of thought which depends upon himself,

and some matter of thought which is independent of him, there is, in every part of his knowledge, a *subjective* and an objective element. The combination of the two elements, the *subjective* or ideal, and the objective or observed, is necessary, in order to give us any insight into the laws of nature.—*Whewell, History of Scientific Ideas*, vol. i. p. 35: 1858.

Sensations and ideas in our knowledge are like matter and form in bodies. Matter cannot exist without form, nor form without matter: yet the two are altogether distinct and opposite. There is no possibility either of separating, or of confounding them. The same is the case with sensations and ideas. Ideas are not transformed, but informed sensations; for without ideas, sensations have no form. The sensations are the objective, the ideas the *subjective* part of every act of perception or knowledge.—*Id., Novum Organon Renovatum*, b. i. aphorisms vi. vii. viii.

Hegel, for his part, will not view these principles of pure thought and pure sense as only *subjective*, as attributes that belong to us, and are only in us, as attributes only human; he considers them, on the contrary, as absolutely universal general principles, on which, and according to which, the all or whole is formed and fashioned.—*J. H. Stirling, Secret of Hegel*, vol. i. p. 127: 1865.

We can conceive now how Hegel was enabled to get beyond the limited *subjective* form of Kant's mere system of human knowledge, and convert that system into something universal and objective.—*Ibid.* vol. i. p. 132.

The fiery heads that light up the day with the rockets of genius, have yet, in *subjective* vanity, *subjective* impatience, hardly opportunity for the slow and laborious accumulation of principles. By such men, then, Hegel is not to be judged, nor by the revolt of such men is his school destroyed.—*Id., Translation of Schwegler's Handbook of the History of Philosophy*, p. 436: 1868.

Terms are used in four different senses. Two objective, directed towards the external object, or, to use old phrases, of first intention, or representing first notions: Two *subjective*, directed towards the internal mind, of second intention, or representing second notions. In objective use the name represents, 1. The individual object; ... 2. The individual quality. ... In *subjective* use the name represents, 1. A class, a collection of individual objects, named after a quality which is in thought as being in each one; 2. An attribute, the notion of quality as it exists in the mind to be given to ... a class. Attribute is to individual quality what class is to individual object.—*De Morgan, Syllabus of a Proposed System of Logic*, §§ 114, 115, 117.

In painting the term *subjective* is now sometimes used in criticism to indicate that the representation of an object or event is modified by, or subjected to, the idiosyncrasy of the artist; and this is in contradistinction to objective, when the object is represented with strict individuality. Rubens and Rembrandt were *subjective* painters; the Dutch and Flemish painters of still life, on the other hand, have been objective in their works.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Subjéctively. *adv.* In a subjective manner.

Kant conceived these relations [the intuitions and categories] *subjectively*, or from the point of view of our thought. Hegel conceives them objectively, or from the point of view of all thought.—*J. H. Stirling, Secret of Hegel*, vol. i. p. 127: 1865.

Subjoín. *v. a.* Add at the end; add afterwards; add in the way of an appendix; tack on.

He makes an excuse from ignorance, the only thing that could take away the fault; namely, that he knew not that he was the high-priest, and *subjoins* a reason.—*South, Sermons.*

Súbjugate. *v. a.* [Lat. *subjugatus*, pass. part. of *subjugo*; *subjugatio, -onis*: *jugum* = yoke.] Conquer; subdue; bring under dominion by force; bring under the yoke; tame; reduce.

O fav'rite virgin, that hast warm'd the breast
Whose sov'reign dictates *subjugate* the east!
Prior, Solomon, ii. 183.

He *subjugated* a king, and called him his vassal.—*Baker.*

Subjugátion. *s.* Act of bringing under the yoke; state of that so brought.

This was the condition of the learned part of the world, after their *subjugation* by the Turks.—*Sir M. Hale.*

Subjúnction. *s.* [Lat. *junctio* = joining; *jungo* = I join; pass. part. *junctus*.]

1. State of being subjoined; act of subjoining.

The verb undergoes in Greek a different formation; and in dependence upon, or *subjunction* to, some other verb.—*Clarke.*

2. In *Grammar.* Conjunction: (this *latter* being the *commoner word*). See under Subjunctive.

Subjúnctive. *adj.* [Lat. *subjunctivus*; Fr. *subjonctif*.]

1. Subjoined to something else.

A few things more, *subjunctive* to the former, were thought meet to be castigated in preachers at that time.—*Bishop Hacket, Life of Archbishop Williams*, p. 87.

2. In *Grammar.* Name of a mood; a verb being in the *subjunctive* mood when, instead of standing alone, it depends, directly or indirectly, upon another verb, with which it is connected by either a conjunction or a relative pronoun. Conjunctive and potential are words with nearly the same meaning, the three being interchangeable; the preference of one to the other being often dependent on the language from which the grammatical nomenclature is taken, and sometimes upon the mere habit of the grammarian. Of the three terms, conjunctive is the most general, potential the most specific.

Sublapsárian. *adj.* [Lat. *lapsus*, pret. part. of *labor* = I slide, slip; *lapsus* = a slide, slip, fall.] Done after the fall of man: (opposed to Supralapsarian).

The decree of reprobation, according to the *sublapsarian* doctrine, being nothing else but a mere preterition, or non-election of some persons whom God left as he found, involved in the guilt of the first Adam's transgression, without any actual personal sin of their own, when he withdrew some others as guilty as they.—*Hammond.*

Sublapsárian. *s.* One who maintains the sublapsarian doctrine.

The *sublapsarians* say, that Adam having sinned freely, and his sin being imputed to all his posterity, God did consider mankind, thus lost, with an eye of pity; and having designed to rescue a great number out of this lost state, he decreed to send his Son to die for them, to accept of his death on their account, and to give them such assistances as should be effectual both to convert them to him, and to make them persevere to the end; but for the rest, he framed no positive act about them, only he left them in that lapsed state without intending that they should have the benefit of Christ's death, or of efficacious and persevering assistances.—*Bishop Burnet, On the Articles*, art. xvii.

Subláte. *v. a.* [Lat. *sublatus* = carried, borne away; *sublatio, -onis*.] Taken off; removed. *Rare.*

By his means and industry the common wealth of the realme was preserved from final destruction and perpetual calamitie, and the auctours of the mischiefe *sublated* and plucked away.—*Hall, Henry VI.* an. 1. (Rich.)

Sublátion. *s.* [Lat. *sublatio, -onis*.] Act of taking away.

He could not be forsaken by a *sublation* of union.—*Bishop, Hall, Remains*, p. 188.

Sublevátion. *s.* [Lat. *sublevatio, -onis*; pass. part. *sublevatus*; *levo* = I raise, lift.] Act of raising on high.

I will be able perfectly to instruct you, not only in the longitude or true meridian of the island, but also in the just latitude thereof; that is to say, in the *sublevation* or height of the pole in that region.—*Sir T. More, Utopia, Giles to Bastide.*

The discontents and insurrections of the nobles in England, though encouraged and supported by foreign forces, yet failed of success against this new king and his government, because they were not followed by any general commotion or *sublevation* of the people.—*Sir W. Temple*, vol. ii. p. 566. (Ord MS.)

Sublieútenant. *s.* Subordinate lieutenant.

The literary *sublieutenant* corrects the proofs. ... This *sublieutant* can remark that, in drawing-rooms, on streets, on highways, at inns, everywhere men's minds are ready to kindle into a flame.—*Carlyle, The French Revolution*, pt. ii. b. ii. ch. ii.

Sublímable. *adj.* Capable of being sublimed.

I had subdivided the body of gold into such minute particles that they were *sublimable*.—*Boyle, Works*, vol. viii. p. 629. (Rich.)

Sublímableness. *s.* Attribute suggested by Sublimable; quality of admitting sublimation.

He obtained another concrete as to taste and smell, and easy *sublimableness*, as common salt armoniack.—*Boyle.*

Súblimary. *adj.* Elevated. *Rare.*

Unto the master of the feast,
This health is consecrated,
Thence to each *sublimary* guest
Whose soul doth desire
This nectar to raise and aspire.
Brome, The Painter's Entertainment. (Rich.)

Súblimate. *v. a.* Exalt; heighten; elevate.

The precepts of Christianity are so excellent and refined, and so apt to cleanse and *sublimate* the more gross and corrupt, as shews flesh and blood never revealed it.—*Dr. H. More, Decay of Christian Piety.*

With all his quick susceptibility for whatever was beautiful and bright, Milton seems to have needed the soothing influences of the regularity and music of verse fully to bring out his poetry, or to *sublimate* his imagination to the true poetical state. The passion which is an enlivening flame in his verse half suffocates him with its smoke in his prose.—*Craik, History of English Literature*, vol. ii. p. 51.

Súblimate. *s.*

1. Anything raised by fire in the retort.

Enquire the manner of subliming, and what metals endure subliming, and what body the *sublimate* makes.—*Bacon.*

2. Quicksilver raised in the retort.

The second manner of manufacturing calomel is to grind very carefully four parts of corrosive *sublimate* (bichloride of mercury) with three parts of quicksilver, adding a little water or spirits to repress the noxious dust during the trituration. The mass is then introduced into a glass globe, and sublimed at a temperature gradually raised. The quicksilver combines with the deutochloride, and converts it into the protochloride or calomel. The presence of corrosive *sublimate* in calomel is easily detected by digesting alcohol upon it, and testing the decanted alcohol with a drop of caustic potash, when the characteristic brick-coloured precipitate will fall if any of the poisonous salt be present.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súblimate. *adj.* Raised by fire in the vessel.

The particles of mercury, uniting with the acid particles of spirit of salt, compose mercury *sublimate*: and, with the particles of sulphur, cinnabar.—*Sir I. Newton, On Opticks.*

Súblimated. *part. adj.* Elevated; refined.

And as his actions rose, so raise they still their vein
In words, whose weight best suits a *sublimated* strain. *Drayton.*

Not only the gross and illiterate souls, but the most aërial and *sublimated*, are rather the more proper fuel for an immaterial fire.—*Dr. H. More, Decay of Christian Piety.*

Sublimátion. *s.*

1. In *Chemistry.* Distillation of dry substances, the volatile parts being thrown off by the action of heat.

Separation is wrought by weight, as in the settlement of liquors, by heat, by precipitation, or *sublimation*; that is, a calling of the several parts up or down, which is a kind of attraction.—*Bacon, Natural and Experimental History.*

Since oil of sulphur per campanam is of the same nature with oil of vitriol, may it not be inferred that sulphur is a mixture of volatile and fixed parts so strongly cohering by attraction, as to ascend together by *sublimation*?—*Sir I. Newton, On Opticks.*

Sublimation differs very little from distillation, excepting that in distillation only the fluid parts of bodies are raised, but in this the solid and dry; and that the matter to be distilled may be either solid or fluid, but *sublimation* is only concerned about solid substances. There is also another difference, namely, that rarefaction, which is of very great use in distillation, has hardly any room in *sublimation*; for the substances which are to be sublimed being solid, are incapable of rarefaction; and so it is only impulse that can raise them.—*Quincy.*

Sublimate is any solid matter resulting from condensed vapours, and *sublimation* is the process by which the volatile particles are raised by heat, and condensed into a crystalline mass.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

(See also under Sublime.)

2. Exaltation; elevation; act of heightening or improving.

She turns
Bodies to spirits, by *sublimation* strange.
Sir J. Davies, Immortality of the Soul.

Shall he pretend to religious attainments, who is defective and short in moral, which are but the rudiments and first draught of religion, as religion is the perfection, refinement, and *sublimation* of morality?—*South, Sermons.*

Sublímatory. *s.* See extract.

Sublimatory [is] a vessel used by chemists in sublimation, i.e. separating certain parts of a body, and

driving them to the top of the vessel in the form of a very fine powder.—*Tyrwhitt, Glossary to Chaucer.* (Rich.)

Sublíme. *adj.* [Lat. *sublimis.*—The origin of this, though a point of Latin rather than of English etymology, claims notice from the extent to which a great scholar and a great metaphysician have occupied themselves concerning it. In his 'Essays on the Sublime,' largely consisting of criticisms of Burke's 'On the Sublime and Beautiful,' Dugald Stewart, without committing himself to any positive opinion as to what the etymology *was*, pronounced what it *was not*; i.e. condemned the derivation from *supra* = above, and *limus* = mud. The derivation, however, thus condemned, found a supporter in Dr. Parr, who argued in favour of *sub* being the equivalent to the Greek ὑπὲρ rather than ὑπό, and to the leading idea in *limus* being the *tenacity* (by which anything inclined to mount aloft would be kept down) of *clay*, rather than ordinary dirtiness or muddiness. In this view the metaphysician seems to have acquiesced; and with him the scholarship of England in general. An abstract of Dr. Parr's argument is given in the Appendix to the third volume of Dugald Stewart's works.]

1. High in place; exalted aloft.

They summ'd their pens, and soaring th' air *sublime*
With clang despised the ground.
Milton, Paradise Lost, vii. 421.

Sublime on these a tow'r of steel is rear'd,
And dire Tisiphone there keeps the ward.
Dryden, Translation of the Æneid, vi. 748.

A dragon's fiery form belied the God;
Sublime in radiant spheres he rode,
While he to fair Olympia prest,
And while he sought her snowy breast,
And round her tender waist he curl'd,
And stamped an image of himself, a sovereign of the world. *Id., Alexander's Feast.*

2. High in excellence; exalted by nature.

My earthly strain'd to the highth
In that celestial colloquy *sublime.*
Milton, Paradise Lost, viii. 454.

Can it be that souls *sublime*
Return to visit our terrestrial clime;
And that the generous mind, released by the death,
Can covet lazy limbs?
Dryden, Translation of the Æneid, vi. 974.

3. High in style or sentiment; lofty; grand.

Easy in words thy style, in sense *sublime.*
Prior, Epistle to Dr. Sherlock.

It appears to me that none of these theorists have paid sufficient attention to the word *sublime* in its literal and primitive sense; or to the various natural associations founded on the physical and moral concomitants of great altitude. It is surely a problem of some curiosity to ascertain what led the Greeks to employ the word ὕψος in this metaphorical acceptation, and what has determined the moderns to adopt so universally the same figure and to give to its meaning a still greater degree of latitude. No other term can be found in our language which conveys precisely the same notion, and to this notion it is now so exclusively appropriated, that its literal import is seldom thought of. To use the word sublimity, in prose composition, as synonymous with altitude or height would be affectation and pedantry.—*Dugald Stewart.*

4. Elevated by joy.

All yet left of that revolted rout,
Heaven fall'n, in station stood of just array,
Sublime with expectation.
Milton, Paradise Lost, x. 534.

Their hearts were jocund and *sublime*,
Drunk with idolatry, drunk with wine.
Id., Samson Agonistes, 1669.

5. Lofty of mien; elevated in manner.

He was *sublime*, and almost tumorous, in his looks and gestures.—*Sir H. Wotton.*

His fair large front and eye *sublime* declared
Absolute rule. *Milton, Paradise Lost*, iv. 300.

Used *substantivally*, with *the*. In the previous editions it is entered as an actual *substantive*; we cannot, however, say *a sublime*. The explanation is 'the grand or lofty style;' followed by the remark that *the Sublime* is a Gallicism, but now naturalized. *Gallicism*, however, is scarcely the right name for the construction; which, besides being Greek rather than French, is, to a great extent, English; in other words, any adjective may be construed substantivally by taking the definite article. The true French element in the import of the word was the criticism to which it had given origin.

The sublime rises from the nobleness of thoughts, the magnificence of the words, or the harmonious and lively turn of the phrase; the perfect *sublime* arises from all three together.—*Addison.*

Longinus strengthens all his laws,
And is himself *the* great *sublime* he draws.
Pope, Essay on Criticism, iii. 675.

The sublime of nature is the sky, the sun, moon, stars, &c. The profound of nature is gold, pearls, precious stones, and the treasures of the deep which are inestimable as unknown. But all that lies between these as corn, flowers, fruit, animals, and things for the mere use of men are of mean price, and so common as not to be greatly esteemed by the curious.—*Id., Art of Sinking in Poetry*, ch. vi.

Terror is in all cases whatsoever, either more openly or latently, the ruling principle of *the sublime.*—*Burke, On the Sublime and Beautiful*, pt. ii. sect. ii.

Opposed as *the sublime* and beautiful usually are by a sort of antithetic arrangement, in our works of rhetoric, or of the philosophy of taste, they are far from being essentially distinct, but, at least in the greater number of instances, shadow into each other; *the sublime*, in these cases, being only one portion of a series of feelings, of which the beautiful, as it has been termed, is also a part. The emotions of sublimity may, indeed, be excited by objects which no diminution of the attendant circumstances, or of intensity of quality, could render beautiful; but which, on the contrary, when thus diminished, are disgusting or ridiculous, rather than agreeable. Yet, though there are, unquestionably, cases of this sort . . . the greater number of cases are, as unquestionably, of a different sort; in which, by gradual increase or diminution of qualities, or alteration of the attendant circumstances, the emotion is progressively varied till, by change after change, what was merely beautiful becomes grand, and ultimately *sublime*; the extremes seeming, perhaps, to have no resemblance but this very difference of the extremes. —*Dr. T. Brown, Lectures on the Philosophy of the Human Mind*, lect. lvii.

No solemn, antique gentleman of rhyme,
Who, having angled all his life for fame,
And getting but a nibble at a time,
Still fussily keeps fishing on, the same
Small 'Triton of the minnows,' *the sublime*
Of mediocrity, the furious tame,
The echo's echo, usher of the school
Of female wits, boy bards—in short, a fool!
Byron, Beppo, lxxiii.

Sublíme. *v. a.* [Fr. *sublimer.*]

1. Raise on high. *Rare.*

Thou dear vine . . .
Although thy trunk be neither large nor strong,
Nor can thy head, not help'd, itself *sublime*,
Yet, like a serpent, a tall tree can climb.
Sir J. Denham, Of Old Age, pt. iii.

2. Exalt; heighten; improve.

Flowers, and then fruit,
Man's nourishment, by gradual scale *sublimed*,
To vital spirits aspire.
Milton, Paradise Lost, v. 483.

Art being strengthened by the knowledge of things, may pass into nature by slow degrees, and so be *sublimed* into a pure genius, which is capable of distinguishing betwixt the beauties of nature and that which is low in her.—*Dryden, Translation of Dufresnoy's Art of Painting.*

Meanly they seek the blessing to confine,
And force that sun but on a part to shine;
Which not alone the southern wit *sublimes*,
But ripens spirits in cold northern climes.
Pope, Essay on Criticism, ii. 398.

Sublíme. *v. n.* Rise in the chemical vessel by the force of fire.

The particles of sal ammoniack in sublimation carry up the particles of antimony, which will not *sublime* alone.—*Sir I. Newton, On Opticks.*

This salt is fixed in a gentle fire, and *sublimes* in a great one.—*Arbuthnot, On the Nature and Choice of Aliments.*

Sublímed. *part. adj.* Elevated.

The fancies of most are moved by the inward springs of the corporeal machine, which even in the most *sublimed* intellectuals is dangerously influential.—*Glanville.*

Sublímely. *adv.* In a sublime manner; loftily; grandly.

In English lays, and all *sublimely* great,
Thy Homer charms with all his ancient heat.
Parnell.

And he, whose fustian's so *sublimely* bad,
It is not poetry, but prose run mad.
Pope, Epistle to Arbuthnot.

Sublímeness. *s.* Attribute suggested by sublime; sublimity.

Mr. Nairn was then the admired preacher of that country, remarkable for accuracy of style, as well as strength of reasoning and *sublimeness* of thought.—*Bishop Burnet, History of his Own Time.*

Sublimificátion. *s.* Act of making sublime.

In general, the poet has great advantages over the painter, in the process of *sublimification*, if the term may be allowed.—*Gilpin.*

Sublíming. *part. adj.* Elevating.

Sublimitátion. *s.* Subordinate, secondary, limitation.

But what is the practical result? Why, when you attempt to read an Act of Parliament, where the exceptions, the secondary exceptions to the exceptions, the limitations and the *sublimitations*, descend, seriatim, by a vast scale of dependencies, the mind finds itself overtasked.—*De Quincey, Works* vol. x. p. 191.

Sublímity. *s.*

1. Height of place; local elevation.

2. Height of nature; excellence.

As religion looketh upon him who in majesty and power is infinite, as we ought we account not of it, unless we esteem it even according to that very height of excellency which our hearts conceive, when divine *sublimity* itself is rightly considered.—*Hooker, Ecclesiastical Polity.*

3. Loftiness of style or sentiment.

Milton's distinguishing excellence lies in the *sublimity* of his thoughts, in the greatness of which he triumphs over all the poets, modern and ancient, Homer only excepted.—*Addison.*

These principles have an effect on the imagination as well as on the passions. To be convinced of this we need only consider the influence of heights and depths on that faculty. Any great elevation of place communicates a kind of pride or *sublimity* of imagination, and gives a fancied superiority over those that lie below; and vice versâ, a sublime and strong imagination conveys the idea of ascent and elevation. Hence it proceeds that we associate in a manner the idea of whatever is good with that of height, and evil with that of lowness. Heaven is supposed to be above and hell below. A noble genius is called an elevated and sublime one. On the contrary, a vulgar and trivial conception is styled indifferently low or mean. Prosperity is denominated ascent, and adversity descent. Kings and princes are supposed to be placed at the top of human affairs, as peasants and day labourers are said to be in the lowest stations. These methods of thinking and of expressing ourselves are not of so little consequence as they may appear at first sight. —*Hume, Treatise of Human Nature.*

Her favourite science was the mathematical,
Her noblest virtue was her magnanimity;
Her wit (she sometimes tried at wit) was Attic all,
Her serious sayings darken'd to *sublimity*;
In short, in all things she was fairly what I call

Her evening silk, or in the summer, muslin,
And other stuffs, with which I won't stay puzzling.
Byron, Don Juan, i. 12.

The moon was hanging low
Over the Asian mountains, and outspread
The plain, the city, and the camp below,
Skirted the midnight ocean's glimmering flow;
The city's moon-lit spires and myriad lamps,
Like stars in a *sublunar* sky did glow,

There cannot be design without a designer; contrivance without a contriver; order without choice; arrangement, without anything capable of arranging; *subserviency* and relation to a purpose without anything that could intend a purpose.... Arrangement, disposition of parts, *subserviency* of means to an end, relation of instruments to a use, imply the presence of intelligence and mind.—*Paley, Natural Theology*, ch. ii.

It is a celebrated notion of a patriot, that a house of commons should never grant such *subsidies* as give no pain to the people, lest the nation should acquiesce under a burden they did not feel.—*Addison.*

Their *subsidy* was sufficiently liberal; but they took care to pray the king, that fit persons might be assigned for its receipt and disbursement, lest it should any way be diverted from the purposes of the war.... There was an equally craving demand for *subsidy* at the next meeting of parliament. The commons now made a more serious stand. The speaker, Sir James Pickering ... reminded the lords of the council of a promise made to the last parliament, that if they would help the king for once with a large *subsidy*, so as to enable him to undertake an expedition against the enemy, he trusted not to call on them again, but to support the war from his own revenues.... To this Scrope, lord steward of the household, protesting that he knew not of any such promise, made answer by order of the king, that, 'saving the honour and reverence of our lord the king, and the lords there present, the commons did not speak truth in asserting that part of the last *subsidy* should be still in the treasury; it being notorious that every penny had gone into the hands of Walworth and Philpot, appointed and sworn treasurers in the parliament, to receive and expend it upon the purposes of the war, for which they had in effect disbursed the whole.' Not satisfied with this general justification, the commons pressed for an account of the expenditure. Scrope was again commissioned to answer, that 'though it had never been seen, that of a *subsidy* or other grant made to the king in parliament or out of parliament by the commons, any account had afterwards been rendered to the commons, or to any other except the king and his officers, yet the king, to gratify them, of his own accord, without doing it by way of right, would have Walworth, along with certain persons of the council, exhibit to them in writing a clear account of the receipt and expenditure, upon condition that this should never be used as a precedent, nor inferred to be done otherwise than by the king's spontaneous command.' The commons were again urged to provide for the public defence, being their own concern as much as that of the king. But they merely shifted their ground, and had recourse to other pretences. They requested that five or six peers might come to them in order to discuss this question of *subsidy*.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

Newton.*

6. In *Mental Philosophy.* Correlative of Attribute; the *attribute* being some quality or relation (as *green, heavy, this*) taken singly, the *substance* being the object which, having more qualities or relations than one, is conceived as standing under, supporting, or serving, as a basis for the whole.

The axiom [of the indestructibility of *substance*] depends upon the idea of *substance* which is involved in all our views of external objects. We unavoidably assume that the qualities and properties which we observe are properties of things;—that the adjective implies a substantive;—that there is, besides the external characters of things, something of which they are the characters. An apple which is red, and round, and hard, is not merely redness, and roundness, and hardness: these circumstances may all alter while the apple remains the same apple. Behind or under the appearances which we see, we conceive something of which we think, or, to use the metaphor which obtained currency among the ancient philosophers, the attributes and qualities which we observe are supported by and inherent in something: and this something is hence called a substratum or *substance*,—that which stands beneath the apparent qualities and supports them. That we have such an idea, using the term 'idea' in the sense in which I have employed it throughout these disquisitions, is evident from what has been already said. The axiom of the indestructibility of *substance* proves the existence of the idea of *substance*, just as the axioms of geometry and arithmetic prove the existence of the ideas of space and number.—*Whewell, Philosophy of the Inductive Sciences*, b. vi. ch. iii. § 2.

Logicians have endeavoured to define *substance* and attribute: but their definitions are not so much attempts to draw a distinction between the things themselves, as instructions what difference it is customary to make in the grammatical structure of the sentence, according as we are speaking of *substances* or of attributes. Such definitions are rather lessons of English, or of Greek, Latin, or German, than of mental philosophy. An attribute, say the school logicians, must be the attribute of something; colour, for example, must be the colour of something; goodness must be the goodness of something; and if this something should cease to exist, or should cease to be connected with the attribute, the existence of the attribute would be at an end. A *substance*, on the contrary, is self-existent; in speaking about it, we need not put it after its name; a stone is not the stone of anything; the moon is not the moon of anything, but simply the moon.—*J. S. Mill, System of Logic*, vol. i. p. 60: 1856.

Substance . . . is the same word, in respect to its etymology, as Hypostasis. . . . The difference between the two words consists in the former being of Latin, the latter of Greek, origin. . . . Attribute [is] that which we ascribe, give to, lay to the account of, or connect with anything. To pay a man the compliment of being honest is to attribute honesty to him. . . . An orange is Round, Yellow, Smooth, Capable (under certain conditions) of Exciting Sounds, Fragrant, Sapid, Elastic, &c. When we say that an orange is this, we Attribute to it certain properties, or qualities. What are they? The qualities, or properties, of Roundness, Yellowness, Smoothness, Sonorousness, Fragrancy, Sapidity. . . . Let us now suppose that all these attributes are, one by one, taken away, and replaced by others; that instead of an orange striking our eyes and sense of touch as round, it strikes them as square, or rhomboid; that it loses its fragrance and becomes fetid; that it sounds like a bell, and tastes like a loaf of bread. Would the object still be an orange? Would it not be something else? . . . Divest the orange of all its attributes without supplying it with new ones. What will it be then? Take away its original colour without replacing it by any fresh one. Let it lose its softness without becoming hard, its roundness without becoming of any other form. Annihilate its weight, taste, and smell. Let it have no means of appealing to eye, ear, taste, smell, or touch, so that it become, at one and the same time, impalpable, invisible, imperceptible. What will it be then? Will it be anything at all? . . . What becomes of the orange? Is it annihilated by the abstraction of its attributes, one and all? Few are prepared to say Yes to this question. Few divest themselves of the notion that sensible and material objects are nothing more than the combination of certain properties, qualities, and attributes, each and all of which may be removed in such a way as to leave an absolute nothing. We rather imagine that, where there are certain attributes in union, there is a certain link which connects them; a basis, or foundation, which supports them; a basis or foundation different from the attributes themselves,—something, which they are not, but upon which they rest. This Something Supports them. This something stands Under them. This something is the Sub-stance, or Under-standing, of objects, as opposed to, or contrasted with, their Attributes. . . . It is, perhaps, unnecessary to say that *substance* as used by logicians, has by no means the sense which so often attaches to it in common conversation, viz. that of Matter or Body. On the contrary, it means anything that can be looked upon as the basis of an attribute. A Ghost is a *substance* of which the most important attribute is its Immateriality or Incorporeity. On the other hand, it is an undoubted fact, and one of which the explanation readily suggests itself, that the abstraction of attributes is easy in proportion as the concrete substance is a sensible object, i.e. an object capable of being seen, heard, tasted, smelt, or felt. Terms like Roundness, Roughness, Smoothness, Yellowness, Sweetness, &c., are much more readily suggested by Balls, Guineas, Sugar, &c., than terms like Virtue, Vice, Goodness, Badness, &c., by Deeds and Characters which have to be got at by means of the observation and comparison of numerous different actions, performed at different times, by different agents. Of these, the *substance* itself is more or less of an abstraction.—*Dr. R. G. Latham, Logic.*

What is the whole gist of the alleged inability? . . . Clearly, our inability to conceive any augmentation or diminution of the sum of being, whether specially regarded under its extension, or its protension, i e. as in space or in time, conducts immediately to the principle of the permanence of *substance*. . . . Amid all sensible changes we are convinced that there is something common to all—an imminent reality—which does not change, but is yet the subject of the changes, . . . the permanence of *substance*, amid the alternation of its sensible states.—*Ingleby, An Introduction to Metaphysic.*

Berkely has evinced no little sagacity in the arguments he adduces to show the difficulties attendant on the ordinary belief, and the obscurity of our ideas of substance, accident, and extension; maintaining that our senses convey to us none but sensible impressions, and do not afford us any proof of the existence or *substantiality* of their objects, and that consequently the existence of an external world, independent of our sensations, may be nothing more than a chimæra.—*Translation of Tenneman's Manual of the History of Philosophy*, p. 344.

2. Betokening existence.

One is obliged to join many particulars in one proposition, because the repetition of the *substantive* verb would be tedious.—*Arbuthnot.*

Substantive. *s.* In *Grammar.* Name of an object founded upon its properties or qualities, rather than upon its relations; names founded upon its relations rather than qualities, being pronouns, and words suggestive of the names of attributes being adjectives.

Claudian perpetually closes his sense at the end of a verse, commonly called golden, or two *substantives* and two adjectives, with a verb between them to keep the peace.—*Dryden.*

All things whatever either exist as the Energies, or Affections of some other thing, or without being the Energies or Affections of some other thing. If they exist as the Energies or Affections of something else, then they are called Attributes. Thus, to think is the attribute of a Man; to be white, of a Swan; to fly, of an Eagle; to be four-footed, of a Horse. If they exist not after this manner, then are they called *substances*. Thus, Man, Swan, Eagle, and Horse, are none of them Attributes, but all *Substances*, because however they may exist in time and place, yet neither of these, nor of anything else, do they exist as Energies or Affections. And thus all things whatsoever being either *Substances* or Attributes, it follows of course that all words, which are significant as Principals, must needs be significant of either the one or the other. If they are significant of Substances, they are called *Substantives*; if of Attributes, they are called Attributes. So that all words whatever, significant as Principals, are either *Substantives* or Attributes.—*Harris, Hermes, or Philosophical Enquiry concerning Universal Grammar.*

There is not much difficulty in thus forming adjectives; but the purposes of natural history require that we should have *substantives* corresponding to these adjectives; and these cannot be obtained without some extension of the analogies of our language. We cannot in general use adjectives or participles as singular *substantives*. The Happy or the Doomed would, according to good English usage, signify those who are happy and those who are doomed in the plural. Hence we could not speak of a particular scaled animal as The Squamate, and still less could we call any such animal A Squamate, or speak of Squamates in the plural. Some of the forms of our adjectives, however, do admit of this substantive use. Thus we talk of Europeans, Plebeians, Republicans; of Divines and Masculines; of the Ultramontanes; of Merdants and Brilliants; of Abstergents and Emollients; of Mercenaries and Tributaries; of Animals, Manuals, and Officials; of Dissuasives and Motives. We cannot generally use in this way adjectives in 'ous,' nor in 'ate' (though Reprobates is an exception), nor English participles, nor adjectives in which there is no termination imitating the Latin, as Happy, Good. Hence, if we have, for purposes of science, to convert adjectives into *substantives*, we ought to follow the form of examples like these, in which it has already appeared in fact, that such usage, though an innovation at first, may ultimately become a received part of the language.—*Whewell, Novum Organum Renovatum.*

Substantiveness. *s.* Attribute suggested by Substantive.

H. Newman, Essay on Development of Christian Doctrine*, ch. i. § i.

Succéssion. *s.* [Fr.; Lat. *successio, -onis.*]

1. Consecution; series of one thing or person following another.

St. Augustine, having reckoned up a great number of the bishops of Rome, saith in all this order of *succession* of bishops there is not one found a Donatist.—*Hooker, Ecclesiastical Polity.*

Reflection on appearances of several ideas, one after another, in our minds, furnishes us with the idea of *succession*.—*Locke.*

Let a cannon bullet pass through a room, and take with it any limb of a man, it is clear that it must strike successively the two sides of the room, touch one part of the flesh first, and another after, and so in *succession*.—*Id.*

Of all truths relating to phenomena, the most valuable to us are those which relate to the order of their *succession*. On a knowledge of these is founded every reasonable anticipation of future facts, and whatever power we possess of influencing those facts to our advantage.... Though the laws of number and space are important elements in the ascertainment of uniformities of *succession*, they can do nothing towards it when taken by themselves. They can only be made instrumental to that purpose when we combine with them additional premisses, expressive of uniformities of *succession* already known. By taking, for instance, as premisses these propositions, that bodies acted upon by an instantaneous force move with uniform velocity in straight lines; that bodies acted upon by a continuous force move with accelerated velocity in straight lines; and that bodies acted upon by two forces in different directions move in the diagonal of a parallelogram, whose sides represent the direction and quantity of those forces; we may by combining these truths with propositions relating to the properties of straight lines and of parallelograms, (as that a triangle is half of a parallelogram of the same base and altitude,) deduce another important uniformity of *succession*, viz. that a body moving round a centre of force describes areas proportional to the times. But unless there had been laws of *succession* in our premisses, there could have been no truths of *succession* in our conclusions. A similar remark might be extended to every other class of phenomena really peculiar; and, had it been attended to, would have prevented many chimerical attempts at demonstrations of the indemonstrable, and explanations which do not explain.—*J. S. Mill, System of Logic*, b. iii. ch. v. § 1.

How do we determine objective change? This means, how do we distinguish between co-existence and *succession*, since in apprehension all our representations are successive? Simply by regarding the indifference in order of *succession* of two states in one case, and the persistence in the order of *succession* in another case.—*Ingleby, An Introduction to Metaphysic*, § 130.

2. Series of things or persons following one another.

The smallest particles of matter may cohere by the strongest attractions, and compose bigger particles of weaker virtue; and many of these may cohere and compose bigger particles, whose virtue is still weaker; and so on for divers *successions*, until the progression end in the biggest particles, on which the operations in chymistry and the colours of natural bodies depend.—*Sir I. Newton, On Opticks.*

Succéssional. *adj.* Following in, making good, a succession.

In the preceding account I have used the term 'permanent' for those teeth which remain in use throughout the animal's life or, if they fall out (as do the rudimentary canines and the premolars of the Macropodidæ), do not give place to *successional* teeth; and I have therefore assumed that the milk or temporary dentition of the typical diphyodont mammals is represented in the marsupials only by the deciduous molars. It may be held, on the other hand, that the large majority of the teeth of the Marsupials are the homologues of the milk or first teeth of the diphyodonts, and that it is the permanent or second dentition which is so feebly represented by the four *successional* premolars.—*W. H. Flower, On the Development and Succession of Teeth in the Marsupialia, Proceedings of the Royal Society*, May 9, 1867.

Nevertheless these changes seem hitherto to have produced no discontent; whether it were that a people neither commercial nor enlightened did not readily perceive their tendency; or, as has been ingeniously conjectured, that these *successive* diminutions of the standard are nearly counterbalanced by an augmentation in the value of silver, occasioned by the drain of money.—*Ibid.* pt. ii. ch. ii.

2. Inherited by succession. *Rare.*

Succéssiveness. *s.* Attribute suggested by Successive; state of being successive.

All the notion we have of duration is partly by the *successiveness* of its own operations, and partly by those external measures that it finds in motion.—*Sir M. Hale.*

This perpetual and latent kind of memory may be termed a sense of *successiveness*: and must be considered as an internal sense by which we perceive ourselves existing in time, much in the same way as by our external and muscular sense we perceive ourselves existing in space. And both our internal thoughts and feelings, and the events which take place around us, are apprehended as objects of this internal sense, and thus as taking place in time. . . . And thus, this sense of *successiveness*, like the muscular sense with which we have compared it, implies activity of the mind itself, and is not a sense passively receiving impressions.—*Whewell, History of Scientific Ideas*, vol. i. p. 142: 1858.

Succéssor. *s.* [Lat.; in the previous editions it is entered as *súccessor*, with the remark that 'this is sometimes pronounced *succéssor*, with the accent in the middle;' evidently showing that the accent thrown back was the accent favoured by Johnson. It is certain that no one who said *súccessor* could be charged with vulgarity; inasmuch as the throwing back of the accent as far as possible has always passed for a refinement in language rather than aught else. Perhaps, however, it is carried too far. *Conféssor* and *proféssor*, the words most like the one under notice, are, beyond doubt, sounded with the accent on the second syllable, by a decided majority of both the critical and the uncritical.] One that follows in the place or character of another: (correlative to *prcdecessor.*)

The king by this queen had a son of tender age, but of great expectation, brought up in the hope of themselves, and already acceptation of the inconstant people, as *successor* of his father's crown.—*Sir P. Sidney.*

Succinic acid is obtained by distilling coarsely pounded amber in a retort by itself, with a heat gradually raised, or mixed with one-twelfth of its weight of sulphuric acid, diluted with half its weight of water. The acid which sublimes is to be dissolved in hot water, to be saturated with potassa or soda, boiled with bone-black, to remove the foul empyreumatic oily matter, filtered, and precipitated by nitrate of lead, to convert it into an insoluble *succinate*; which being washed is to be decomposed by the equivalent quantity of sulphuric acid. Succussion of the trunk of the body was mentioned by Hippocrates in several parts of his works, and was employed by him to ascertain the presence of purulent and other fluids in the cavities of the chest. . . . Laennec first clearly demonstrated the conditions upon which the evidence furnished by *succussion* depends, and since his time this mode of investigating diseases of the chest has been resorted to whenever they have been supposed to have been attended by effusion of fluid into the thoracic cavities. It is chiefly in pneumothorax that *succussion* produces the sound of fluctuation in the pleural cavity, for it is necessary to the production of this sound that, along with the fluid, more or less air should also be present. — *Copland, Dictionary of Practical Medicine.*

I also found a small 'remora,' or *sucking-fish*, near his tail; but when I put it to my mouth, it fixed itself so firmly on both my lips that I thought they were sealed for ever. It is said, and may but too easily be believed, that the *sufferings* of the fugitives were terrible. How many old men, how many women with babes in their arms, sank down and slept their last sleep in the snow; how many, having crawled, spent with toil and hunger, into nooks among the precipices, died in those dark holes, and were picked to the bone by the mountain ravens, can never be known.—*Macaulay, History of England*, ch. xviii.

For a bishop to have a coadjutor, or, as the statute calls him, a *suffragan* to assist him, was no new thing, but of ancient use in England before Henry the Eighth. . . Such *suffragan*, or coadjutor, was to have no revenue or jurisdiction in his diocess, whose *suffragan* he was; save what the bishop should by commission under his seal allow him.—*Bishop Barlow, Remains*, p. 161.

By the concordat of Calixtus, it appears that the decision of contested elections was reserved to the emperor, assisted by the metropolitan and *suffragans*. To the law and to the testimony let the appeal be in the first place; and next to the united *suffrage* of the primitive churches, as the best and safest comment upon the other.—*Bishop Waterland.*

When I took the first survey of my undertaking, I found our speech copious without order, and energetick without rules: wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated; choice was to be made out of boundless variety, without any established principle of selection; adulterations were to be detected, without a settled test of purity; and modes of expression to be rejected or received, without the *suffrages* of any writers of classical reputation or acknowledged authority.—*Johnson, Preface to Dictionary.*

When the emperors had surrendered their pretensions to interfere in episcopal elections, the primitive mode of collecting the *suffrages* of clergy and laity in conjunction, or at least of the clergy with the laity's assent and ratification, ought naturally to have revived.—*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. vii.

2. In *Chemistry.* See extract.

Sugar . . . is the sweet constituent of vegetable and animal products. It may be distinguished into two principal species. The first, which occurs in the sugar-cane, the beet-root, and the maple, crystallizes in oblique four-sided prisms, terminated by two-sided summits; it has a sweetening power which may be represented by 100; and in circumpolarization it bends the luminous rays to the right. The second occurs ready formed in ripe grapes and other fruits; it is also produced by treating starch with diastase or sulphuric acid. This species forms cauliflower concretions, but not true crystal; it has a sweetening power which may be represented by 60°; and in circumpolarization it bends the rays to the left. Besides these two principal kinds of *sugar*, some others are distinguished by chemists; as the *sugar* of milk, of manna, of certain mushrooms, of liquorice-root, and that obtained from sawdust and glue by the action of sulphuric acid; but they have no importance in a manufacturing point of view.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar of lead. See extract.

Sugar of lead, though made of that insipid metal and sour salt of vinegar, has in it a sweetness surpassing that of common sugar.—*Boyle.*

Sugar of lead, properly acetate of lead, is prepared by dissolving pure litharge with heat, in strong vinegar, made of malt, wood, or wine, till the acid be saturated. . . . A main point in the preparation of *sugar of lead* is to use a strong acid; otherwise much time and acid are wasted in concentrating the solution. This salt crystallizes in colourless, transparent, four and six-sided prisms, from a moderately-concentrated solution; but from a stronger solution, in small needles, which have a yellow cast if the acid has been slightly impure.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgar. *v. a.* Sweeten with sugar.

Bishop Hall, Satires, ii. 4. (Nares by H. and W.)

Súgar-cane. *s.* See extract from Lindley.

A piece of some geniculated plant, seeming to be part of a *sugar-cane.—Woodward.*

There are several varieties of the *sugar-cane* plant. The first and longest known is the creole, or common *sugar-cane*, which was originally introduced at Madeira. It grows freely in every region within the tropics, on a moist soil, even at an elevation of 3000 feet above the level of the sea. In Mexico, among the mountains of Caudina Masea, it is cultivated to a height of more than 5000 feet. The quantity and quality of sugar which it yields is proportional to the heat of the place where it grows, provided it be not too moist and marshy.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar is a general product of grasses. Gynerium saccharoides, a Brazilian grass, derives its name from that circumstance. It exists in great quantity in the *sugar-cane* (Saccharum officinale). Maize so abounds in it that its cultivation has been proposed in lieu of the *sugar-cane*; and it is probable that the value of the other species for fodder depends upon the abundance of this secretion.—*Lindley, Vegetable Kingdom.*

Súgar-loaf. *s.* Conical mass of white sugar.

The next process in sugar-refining is the evaporation of the clarified syrup to the granulating or crystallizing pitch. The more rapidly this is effected, and with the less scorching injury from fire, the better and greater is the product in *sugar-loaves.—Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgar-mill. *s.* Mill for squeezing sugar-canes.

The first machines employed to squeeze the canes were mills similar to those which serve to crush apples in some cider districts, or somewhat like tan-mills. In the centre of a circular area of about seven or eight feet in diameter, a vertical heavy wheel was made to revolve on its edge, by attaching a horse to a cross-beam projecting horizontally from it, and making it move in a circular path. The cane pieces were strewed on the somewhat concave bed in the path of the wheel, and the juice expressed flowed away through a channel or gutter in the lowest part. This machine was tedious and unproductive. It was replaced by the vertical cylinder mill of Gonzales de Velosa; which has continued till modern times with little variation of external form, but is now generally superseded by the *sugar-mill* with horizontal cylinders.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgar-mould. *s.* Mould for making sugar into loaves.

The first care of the refiner should therefore be the immediate abstraction of these noxious alteratives, which he effects by the process called meltings; that is, mixing up the sugar in a pan with hot water of steam into a pap, and transferring this pap into large *sugar-moulds*.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgar-plum. *s.* Sweetmeat so called.

If a child must have *sugar-plums* when he has a mind, rather than be out of humour, why, when he is grown up, must he be not satisfied too with wine. —*Locke.*

Súgar-refínery. *s.* Establishment for refining sugar.

There are three classes of *sugar-refineries* in the country.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgar-refíning. *verbal abs.* Process by which the raw sugar, or sugar which, as usually imported, is not sufficiently pure for use, is purified.

In the ... description of *sugar-refining*, I have said nothing about the process of claying the loaves, because it is now nearly obsolete.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súgared. *part. adj.* Sweetened with, or as with, sugar; sweet like sugar.

Thou would'st have plunged thyself
In general riot, and never learn'd
The icy precepts of respect, but followed
The *sugar'd* game before thee.

His glosing sire his errand daily said,
And *sugar'd* speeches whisper'd in mine ear.
Fairfax.

Who casts out threats and frowns, no man deceives,
Time for resistance and defence he gives;

And poison in high tasted meats conveys.

Such was the maintenance of *suits*, or confederacies for the purpose of supporting each other's claims in litigation, which was the subject of frequent complaints in parliament, and gave rise to several prohibitory statutes. By help of such confederacies, parties were enabled to make violent entries upon the lands they claimed, which the law itself could hardly be said to discourage.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

Súlphur *s.* [Lat.] In *Chemistry.* Elementary substance so called; the name, unlike the majority of similar ones, being destitute of any technical termination indicative of its character—e.g. *-um,* as in *sodium, potassium* (denoting a metal); *-ine,* as in *iodine, chlorine*; and *-en,* as in *hydrogen, nitrogen.* This suggests the likelihood of the characters of sulphur being negative rather than positive. What they are is best seen in the extracts. In the arts and in common language *brimstone* is an approximate synonym; it applies, however, chiefly to the element in its solid form. When reduced to a powder by sublimation it is called 'Flowers of *sulphur*' rather than 'Flowers of *brimstone.*' All the chemical terms, too, are derivatives of *sulphur*, and they are very numerous; *sulphuric, sulphurous, sulphate, sulphite, sulphide, sulphuret, sulphuretted,* &c.

In his womb was hid metallick ore,
The work of *sulphur. Milton, Paradise Lost,* i. 674.

Sulphur is produced by incorporating an oily or bituminous matter with the fossil salt.—*Woodward.*

Berzelius has directed special attention to the fact that *sulphur*, although an element, is capable of existing in two or even three forms which are mechanically distinct, although chemically the same. We have *sulphur* in the two distinct crystalline forms above mentioned, and to these we may add the plastic form in which it is obtained by being thrown into cold water when at a high temperature. It also occurs in three liquid modifications when first melted at or a little above its point of fusion, the thick viscid state which occurs when it is further heated, and again the more fluid state which it assumes when heated nearly to its boiling point.—*Turner, Elements of Chemistry.*

Sulphur is a simple combustible, solid, non-metallic, of a peculiar yellow colour, very brittle, melting at the temperature of 226° Fahr., and possessing after it has been fused, a specific gravity of 1·99. When held in a warm hand, a roll of *sulphur* emits a crackling sound, by the fracture of its interior parts; and when it is rubbed, it emits a peculiar well-known smell, and acquires at the same time negative electricity. When heated to the temperature of 560° Fahr. it takes fire, burns away with a dull blue flame of a suffocating odour, and leaves no residuum. When more strongly heated, *sulphur* burns with a vivid white flame. It is not affected by air or water.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súlphur-wort. *s.* Native umbelliferous herb (akin to the parsleys, carrots, fennels, &c.) of the genus Peucedanum.

Sulphur-wort [is] a genus of perennial, fœtid, resinous, smooth herbs, with round, striated, branching, leafy, solid stems. Leaves repeatedly compound, with extremely narrow, acute, entire leaflets. Umbels large, concave, or flat, of numerous general and partial smooth rays; bracts several, rather small; flowers yellow; fruit first reddish, then of a tawny brown; there is one indigenous species, but it is not common, the sea *sulphur-wort*, or hog's fennel (P. officinale), which grows in salt marshes, flowering from July to September.—*C. W. Johnson, Farmer's Encyclopædia.*

Súlphurate. *adj.* Of or belonging to sulphur; having the colour of sulphur.

He interprets their breastplates of fire and of jacinth and brimstone, of the colour of their horsemen's coats, as if they were made of thread of either colour 'de feu,' violet colour, or a pale *sulphurate* colour.—*Dr. H. More, Mystery of Godliness,* p. 189; 1660.

Sulphuring-rooms are sometimes conducted upon a great scale, in which blankets, shawls, and woollen clothes may be suspended freely upon poles and cords.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sulphúreous. *adj.* Made of brimstone; having the qualities of brimstone; containing sulphur; impregnated with sulphur.

Is not the strength and vigour of the action between light and *sulphureous* bodies, observed above, one reason why *sulphureous* bodies take fire more readily, and burn more vehemently than other bodies do?—*Sir I. Newton, On Opticks.*

Sulphúric. *adj.* [the termination *-ic* is an artificial annex in *Chemistry*, indicating an acid and its nature.] With *acid.* Oil of vitriol.

Sulphuric acid, . . . the agent of many chemical operations, was formerly procured by the distillation of dried sulphate of iron, called green vitriol, whence the corrosive liquid which came over, having an oily consistence, was denominated oil of vitriol. This method has been superseded in Great Britain, France, and most other countries, by the combustion of sulphur along with nitre, in large leaden chambers.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

2. Comprise; comprehend; collect into a narrow compass.

And adds the greatest, of a loyal son.

Súmach. *s.* [?] See extracts.

In the common *sumach*, especially, the cellular or inner part of each zone has precisely the same appearance as the pith, which is here of a peculiar brown colour and easily recognised.—*Henslow, Principles of Descriptive and Physiological Botany*, pt. i. sect. i.

Sumach is the powder of the leaves, peduncles, and young branches of the Rhus coriaria, and Rhus cotinus, shrubs which grow in Hungary, the Bannat, and the Illyrian provinces. Both kinds contain tannin, with a little yellow colouring-matter, and are a good deal employed for tanning light-coloured leathers; but the first is the best. With mordants, it dyes nearly the same colours as galls. In calico-printing, *sumach* affords, with a mordant of tin, a yellow colour; with acetate of iron, weak or strong, a gray or black, and, with sulphate of zinc, a brownish-yellow.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Súmbul. *s.* [Tartar or Russian.] In *Pharmacy.* Stimulant, of recent introduction, so called.

This drug was introduced into Germany from Russia about the year 1840: more recently it has been brought under the notice of the medical profession in England. The botanical origin of *sumbul* root is involved in obscurity: from a resemblance which it bears to angelica, there is reason to think it is afforded by some nearly allied umbelliferous plant. It has been supposed a native of Persia; but we think there is greater reason to conclude that it is produced in some of the more remote regions of Central Asia. Dr. Granville states that it is brought into the Moscow drug market by way of Kiachta.—*Pereira, Elements of Materia Medica and Therapeutics.*

Súmless. *adj.* Not to be computed.

Working and winding slily evermore,
The inward walls and *summers* cleft and tore;
But grace shored these, and cut that as it grew.

With here a fountain, never to be play'd,
And there a *summerhouse*, that knows no shade.
Pope, Moral Essays, iv. 121.

There is so much virtue in eight volumes of Spectators, such a reverence of things sacred, so many valuable remarks for our conduct in life, that they are not improper to lie in parlours or *summerhouses*, to entertain our thoughts in any moments of leisure.—*Watts.*

Súmmering. *s.*

1. Summer holiday.

His (a ruffian's) soveraignty is shewn highest at May-games, wakes, *summerings*, and rush-bearings; where it is twentie to one but hee becomes beneficiall, before he part, to the lord of the mannour, by reeson of a bloody nose or a broken pate.—*Clitus' Whimzies.* (Nares by H. and W.)

Nor drums disturb his morning sleep.
Dryden, Translation from Horace, epode ii.

It is not easy to determine how long the inferior tenants in chief continued to sit personally in parliament. In the charters of Henry III., the clause which we have been considering is omitted: and I think there is no express proof remaining, that the sheriff was ever directed to *summon* the king's military tenants within his county, in the manner which the charter of John required. It appears, however, that they were in fact members of parliament on many occasions during Henry's reign, which shows that they were *summoned* either by particular writs, or through the sheriff; and the latter is the more plausible conjecture.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

2. Excite; call up; raise: (with *up* emphatical).

To prove the last extremities of war.
Dryden, Cymon and Iphigenia, 270.

But from the beginning of Edward III.'s reign, it seems that the council and the lords' house in parliament were often blended together into one assembly. This was denominated the great council, being the lords spiritual and temporal, with the king's ordinary council annexed to them, as a council within a council. And even in much earlier times, the lords, as hereditary counsellors, were, either whenever they thought fit to attend, or on special *summonses* by the king (it is hard to say which), assistant members of this council, both for advice and for jurisdiction.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

Súmptuary. *adj.* Relating to expence; regulating the cost of life.

To remove that material cause of sedition, which is want and poverty in the estate, serveth the opening and well-balancing of trade, the banishing of idleness, the repressing of waste and excess by *sumptuary* laws.—*Bacon.*

Whether allowable to ruin oneself? The political economist replies that it is! . . . Political economists therefore tell us, that any regulations would be ridiculous which, as Lord Bacon expresses it, should serve for 'the repressing of waste and excess by *sumptuary* laws.' Adam Smith is not only indignant at '*sumptuary* laws,' but asserts . . . that 'it is the highest impertinence and presumption in kings and ministers to pretend to watch over the economy of private people, and to restrain their expense by *sumptuary* laws. . . . *Sumptuary* laws, so often enacted, and so often repealed, and always eluded, were the perpetual, but ineffectual attempts of all governments, to restrain what, perhaps, cannot be restrained—criminal folly! And to punish a man for having ruined himself would usually be to punish a most contrite penitent! It is not surprising that before 'private vices' were considered as 'public benefits,' the governors of nations instituted *sumptuary* laws—for the passion for pageantry, and an incredible prodigality in dress were continually impoverishing great families.—*I. Disraeli, Curiosities of Literature, Whether Allowable to Ruin Oneself?*

Right up above the mast did stand,

Coleridge, Ancient Mariner.

Was mine of regal splendour.

Súnbow. *s.* Iris differing from the rainbow in being formed by the water which refracts the rays of the sun arising from water in its *ascent*; i.e. from cataracts, mists, &c., rather than its *descent*, as in rain.

It is not noon—the *sunbow's* rays still arch
The torrent with the many hues of heaven,
And roll the sheeted silver's waving column
O'er the crag's headlong perpendicular,
And fling its lines of foaming light along,
And to and fro, like the pale courser's tail,
The giant steed, to be bestrode by Death,
As told in the Apocalypse.

The iris is formed by the rays of the sun over the lower part of the Alpine torrents; it is exactly like a rainbow come down to pay a visit, and so close that you may walk into it; this effect lasts till noon. Before ascending the mountain, went to the torrent; the sun upon it forming a rainbow of the lower part of all colours, but principally purple and gold, the bow moving as you move. I never saw anything like this; it is only in the sunshine.—*Byron, Manfred*, ii. 2, and note.

In forests. *Ibid. The Pythagorean Philosophy.*

Jove may kill, but ne'er shall *sunder*. *Granville.*

Súnder. Entered in the previous editions as a substantive. Unless, however, we look upon it as the singular form of *sundries* (which is better connected with *sundry*), it is difficult to treat it as such. In *in sunder*, the construction is that of *in two*, as 'He broke it in *two*,' or 'in *twain*;' and the same is the case with *a-sunder*. Hence, it is an element in an adverbial combination, rather than either a noun or an adverb. *Sundries* = *sundry things*, is a substantive in the way that *blacks* = black men, is one; i.e. a substantive of adjectival origin, but substantival inasmuch as it takes a plural form.

He breaketh the bow, and cutteth the spear in *sunder*.—*Psalms*, xlvi. 9.

Súndew. *s.* In *Botany.* Native plant of the genus Drosera.

Sundew.—This is a most singular and beautiful genus of plants, whose leaves are ornamented with red glandular hairs, discharging from their ends a drop of viscid acrid juice, which, from its resemblance to dew, has given rise to the common and generic name. These hairs are so irritable as to contract when touched, imprisoning insects, after the manner of Dionæa muscipula. In their native state they are found growing on mossy turfy bogs. They are all increased by seeds, which should be allowed to sow themselves. There are three indigenous species, all perennials. The leaves are either undivided or lobed, entire; flowers terminal, racemose, rarely solitary; petals red or white.—*C. W. Johnson, Farmer's Cyclopædia.*

Súndial. *s.* Marked plate on which the shadow points the hour.

All your graces no more shall you have,

Súnfish. *s.* In *Icthyology.* Fish of the genus Orthagoriscus.

The *sun-fish*, as this species has been called, from the two-fold circumstances of its circular form and shining surface, though occurring but occasionally, may be said to have been taken from John o'Groat's to the Land's End.... Mr. Couch says the short-*sun-fish* is migratory, keeping probably at the bottom, and feeding on seaweeds in its ordinary habits; but in calm weather it mounts to the surface, and lies, perhaps asleep, with its head, and even its eyes, above the water, floating with the tide. Mr. Couch has known the *sun-fish* make powerful but awkward efforts to escape when attacked, bending and directing its motions in various ways.—*Yarrell, History of British Fishes.*

Súnflower. *s.* In *Botany.* Plant of the genus Helianthemum.

The *sunflower*... appears to possess far more profitable qualities than were hitherto supposed, and, besides forming a beautiful object in a bed of flowers, it may be cultivated with advantage, and applied to many useful purposes. An acre of land will contain 25,000 *sunflower* plants, at twelve inches distant from each other. The produce will be according to the nature of the soil and mode of cultivation; but the average has been found to be fifty bushels of the seed per acre, which will yield fifty gallons of oil. The oil is excellent for table use, burning in lamps, and for the manufacture of soaps. The marc or refuse of the seeds, after the oil has been expressed, made into cake, will produce 1,500 lbs., and the stalks, when burnt for alkali, will give 10 per cent. of potassa. The green leaves of the *sunflower*, when dried and burnt to powder, make excellent fodder for milch cows, mixed with bran.—*C. W. Johnson, Farmer's Cyclopædia.*

Súnstroke. *s.* In *Medicine.* See extract: (*coup-de-soleil*, French for *stroke-of-the-sun*, often used, unnecessarily, instead).

Sunstroke [is] a sudden seizure of vertigo, with intense headache, constriction or oppression in the thorax, flushed or livid countenance and vomiting, followed by almost instant death; or by lethargy, sopor, or coma, or convulsions, caused by exposure to the sun's rays, or to a very high temperature. These effects of a powerful sun have been noticed from the earliest periods of history. Two instances of this sudden seizure are related in the Bible, and have been quoted by Sir Ranald Martin. ... '*Sunstroke.*—"And Manasses was her husband, of her tribe and kindred, who died in the barley harvest. For as he stood overseeing them, and bound sheaves in the field, the heat came upon his head, and he fell on his bed, and died in the city of Bethulia." (Judith, viii. 3.) ... "And when the child was grown, it fell on a day, that he went out to his father to the reapers. And he said unto his father, My head, my head; and he said to a lad, Carry him to his mother. And when he had taken and brought him to his mother, he sat on her knee till noon, and then he died." (2 Kings, iv. 18–21.)' *Sunstroke* was frequently fatal amongst the crusaders, not only in Syria and Palestine, but also in the countries through which they passed. It has always been one of the chief causes of the mortality, especially in modern times, in armies during hot seasons, and in warm countries, their dress, &c., especially in the English armies, favouring the injurious effects of exposure.—*Copland, Dictionary of Practical Medicine.*

4. In *Logic.* See extract.

In [a] popular sense any two classes, one of which includes the whole of the other and more, may be called a genus and a species. Such, for instance, are animal and man; man and mathematician. Animal is a genus; man and brute are two species; or we may divide it into a greater number of species, as man, horse, dog, &c. Biped, or two-footed animal, may also be considered a genus, of which man and bird are two species. Taste is a genus, of which sweet taste, sour taste, salt taste, &c. are species. Virtue is a genus; justice, prudence, courage, fortitude, generosity, &c. are its species. The same class which is a genus with reference to the sub-classes or species included in it, may be itself a species with reference to a more comprehensive, or, as it is often called, a *superior*, genus. Man is a species with reference to animal, but a genus with reference to the species mathematician. Animal is a genus, divided into two species, man and brute; but animal is also a species, which, with another species, vegetable, makes up the genus, organized being. Biped is a genus with reference to man and bird, but a species with respect to the *superior* genus, animal. Taste is a genus divided into species, but also a species of the genus sensation. Virtue, a genus with reference to justice, temperance, &c., is one of the species of the genus, mental quality.—*J. S. Mill, System of Logic.*

Melchior Inchoffer, a Jesuit, published a book to vindicate the miracle of a letter which the Virgin Mary had addressed to the citizens of Messina: when Naudé brought him positive proofs of its evident forgery. Two assemblies (placita) were annually held. In the first, all regulations of importance to the public weal for the ensuing year were enacted; and to this, he says, the whole body of clergy and laity repaired; the greater to deliberate upon what was fitting to be done; and the less to confirm by their voluntary assent, not through deference to power, or sometimes even to discuss, the resolutions of their *superiors*.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ii.

Crump thinks St. Boniface the centre of the world, and his position as president the highest in England.... Superiórity. *s.* Condition of that which is superior; quality of being greater, or higher, than another in any respect; pre-eminence.

Creasy, The Fifteen Decisive Battles of the World, Victory of Arminius.*

G. 2 b. (Nares by H. and W.)

To drink *supernaculum* was an ancient custom not only in England, but also in several other parts of Europe, of emptying the cup or glass, and then pouring the drop or two that remained at the bottom upon the person's nail that drank it, to shew that he was no flincher.—*Brand, Popular Antiquities.*

The best account I can find of all the refinements of this new science of potation, when it seems to have reached its height, is in our Tom Nash, who being himself one of these deep experimental philosophers, is likely to disclose all the mysteries of the craft. He says, 'Now, he is nobody that cannot drink *super-nagulum*; carouse the hunter's hoope; quaff upse freze crosse; with healths, gloves, mumpes, frolickes, and a thousand such domineering inventions.' Drinking *super-nagulum*, that is, 'on the nail,' is a device, which Nash says is new come out of France; but it had probably a northern origin, for far northward it still exists. . . . The custom is also alluded to by Bishop Hall, in his satirical romance of 'Mundus alter et idem,' 'A Discovery of a New World,' a work which probably Swift read, and did not forget. The Duke of Tenterbelly in his oration, when he drinks off his large goblet of twelve quarts on his election, exclaims, should he be false to their laws, 'Let never this goodly-formed goblet of wine go jovially through me;' and then he set it to his mouth, stole it off every drop, save a little remainder, which he was by custom to set upon his thumb's nail, and lick it off as he did. The phrase is in Fletcher:

I am thine 'ad unguem——

that is, he would drink with his friend to the last. In a manuscript letter of the times, I find an account of Columbo the Spanish ambassador being at Oxford, and drinking healths to the Infanta. The writer adds, 'I shall not tell you how our doctors pledged healths to the Infanta and the archduchess; and if any left too big a snuff, Columbo would cry, *supernaculum, supernaculum!*' This Bacchic freak seems still preserved; for a recent traveller, Sir George Mackenzie, has noticed the custom in his Travels through Iceland.—*I. Disraeli, Curiosities of Literature, Drinking-Customs in England.*

But here approaches
Our sage intendant, with the wine: however,

Supernátural. *adj.* Being above the powers of nature.

There resteth either no way unto salvation, or if any, then surely a way which is *supernatural*, a way which could never have entered into the heart of a man, as much as once to conceive or imagine, if God himself had not revealed it extraordinarily; for which cause we term it the mystery or secret way of salvation.—*Hooker, Ecclesiastical Polity.*

Súppurate. *v. a.* [Lat. *pus, puris.* This, in the old grammars, dictionaries, and nomenclatures, is rendered *corruption*; a Latinism which may be heard among the most uneducated classes. The vernacular name is *matter* (i.e. in its pathological sense.)] Generate pus.

This disease is generally fatal: if it *suppurates* the pus, it is evacuated into the lower belly, where it produces putrefaction.—*Arbuthnot, On Diet.*

Súppurating. *part. adj.* Secreting pus.

But if the *suppurating* surface of the vein be not so shut off, and pus mingle and circulate with the blood, the disorder is no longer merely local. The contaminated blood is conveyed to distant parts, and the whole system tainted. The malady has become general, and of the most formidable character.—*Sir T. Watson, Lectures on the Principles and Practice of Physic.*

Suppurátion. *s.*

1. Ripening or change of the matter of a tumour into pus.

If the inflammation be gone too far towards a *suppuration*, then it must be promoted with suppuratives, and opened by incision.—*Wiseman, Surgery.*

This great attrition must produce a great propensity to the putrescent alkaline condition of the fluids, and consequently to *suppurations.—Arbuthnot, On Aliments.*

By some it is supposed to carry off humours from the constitution. *Suppuration* is sometimes regarded as a constitutional disease changed into a local one; which constitutional malady is discharged, or thrown out of the body, either in the form of pus or together with this fluid. Critical abscesses have been thought to be cases of this sort. *Suppuration* has also been imagined to carry off local complaints from other parts of the body, on the old principle of derivation or revulsion. For this reason sores or issues are often made in sound parts before other sores are dried up. *Suppuration* is sometimes excited with a view of making parts, such as indurated swellings, dissolve into pus: but I have endeavoured to show that no dissolution of the solids is concerned in the production of pus.—*Cooper, Dictionary of Practical Surgery.*

But in many instances the inflammation does not thus subside. The irritant cause still remains in action, as the original intensity of the inflammation has been too great to admit of resolution—or the means proper to abate it have not been used, or have not succeeded. The symptoms already described continue, and are aggravated in degree; at length the swelling begins to assume a more projecting and pointed form, and the skin in its centre to look white; the central part of the swelling, formerly so hard, becomes softer; the pain is of a throbbing kind; a pulsative sensation keeping time with the beats of the heart is experienced in the part, and often a feeling occurs as if something had given way within it; at last, if art do not interpose, the cuticle breaks, and a yellow cream-like fluid is poured out, which we call pus; and upon its escape there generally ensues a considerable and speedy abatement of all the local symptoms of inflammation, of the pain, the heat, the redness. This is *suppuration.*—*Sir T. Watson, Lectures on the Principles and Practice of Physic*, lecture ix.

2. Matter suppurated; pus.

The great physician of souls sometimes cannot cure without cutting us: sin has festered inwardly, and he must lance the imposthume, to let out death with the *suppuration.—South, Sermons.*

Súppurative. *s.* Suppurating medicine.

If the inflammation be gone too far towards a suppuration, then it must be promoted with *suppuratives*, and opened by incision.—*Wiseman, Surgery.*

The condition which respects the inflammation itself is probably contained in its greater tendency to certain results. Now inflammation tends to the deposition of lymph, and to the effusion of serum and of blood, and to suppuration. And all these results are often found to occur equally and in quick succession, or almost simultaneously; but often one or other is the predominant or almost exclusive result. Accordingly, in different cases, inflammation will bear to be called adhesive, or serous, or hæmorrhagic, or *suppurative.* And the more it is adhesive, or has its tendency to the deposition of lymph, the more does it admit the curative impression of mercury.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart.*

Supputátion. *s.* Reckoning; account; calculation; computation.

From these differing properties of day and year arise difficulties in carrying on and reconciling the *supputation* of time.—*Holder, On Time.*

The *supralapsarians* think that God does only consider his own glory in all that he does; and that whatever is done, arises, as from its first cause, from the decree of God; that, in this decree, God, considering only the manifestation of his own glory, intended to make the world, to put a race of men in it, to constitute them under Adam as their fountain and head; that he decreed Adam's sin, the lapse of his posterity, and Christ's death, together with the salvation or damnation of such as should be most for his glory; that to those who were to be saved, he decreed to give such efficacious assistances, as should certainly put them in the way of salvation; and to those whom he rejected, he decreed to give such assistances and means only, as should render them inexcusable; that all men do continue in a state of grace or of sin, and shall be saved or damned, according to that first decree.—*Bishop Burnet, On the Thirty-nine Articles*, art. xvii.

Súricat. *s.* [?] In *Zoology.* Animal of the genus Cercoleptes.

The sentiments of M. Fred. Cuvier on the situation of this curious animal, called by him the *suricate*, are in unison with those of Erxleben. He considers it is intermediate between the genuine carnivora and the plantigrades: the teeth are more tuberculous than those of Herpestes, and less so than those of Nasua. It has the feet—the number of toes excepted—of the latter genus; but the sole is entirely bare as in Nasua, which it further resembles in its prolonged muzzle, while the tongue partakes of the characters of both these genera. In size, this animal is rather less than a rabbit; but its long legs and general form, as represented by M. Fred. Cuvier, reminds us much more of a little sharp-nosed dog than of a weasel: when disconcerted, its voice resembles the barking of a puppy. It must be remarked, however, that the resemblance to the dog, after all, is but slight, for the *suricate* has only four toes to its feet, and is provided with an anal pouch; that it will stand on its hind legs only, and feed with its paws; and that in walking the entire sole of the foot is placed upon the ground.—*Swainson, Natural History, Classification of Quadrupeds*, § 164.

Where they should live in woe, and die in wretchedness. *Spenser.*

Súrname. *s.* [Fr. *surnom.*]

1. Name of the family; name which one has over and above the Christian name.

Many which are mere English joined with the Irish against the king, taking on them Irish habits and customs, which could never since be clean wiped away; of which sort be most of the *surnames* that end in 'an,' as Hernan, Shinan, and Mungan, which now account themselves natural Irish.—*Spenser, View of the State of Ireland.*

He, made heir not only of his brother's kingdom, but of his virtues and haughty thoughts, and of the *surname* also of Barbarossa, began to aspire to the empire.—*Knolles, History of the Turks.*

The epithets of great men, Monsieur Boileau is of opinion, were in the nature of *surnames*, and repeated as such.—*Pope.*

It is a great dispute whether we should write *surname* or *sirname*: on the one hand, there are a thousand instances in court-rolls, and other ancient muniments, where the description of the person, 'le Smyth,' 'le Tayleur,' &c. is written over the Christian name of the person, this only being inserted in the line; and the French always write *surnom*. And certainly *surname* must be the truth, in regard of the patriarch or first person that bore the name. However, there is no impropriety, at this time of day, to say *sirname*, since these additions are so apparently taken from our *sires* or fathers. Thus the matter seems to be left to people's option.—*Pegge, Anonymiana, or Ten Centuries of Observations*, iii. 32.

There still, however, wanted something to ascertain gentility of blood, where it was not marked by the actual tenure of land. This was supplied by two innovations devised in the eleventh and twelfth centuries; the adoption of *surnames* and of armorial bearings. The first are commonly referred to the former age, when the nobility began to add the names of their estates to their own, or, having any way acquired a distinctive appellation, transmitted it to their posterity. . . . The authors of the Nouveau Traité de Diplomatique trace the use of *surnames* in a few instances even to the beginning of the tenth century; but they did not become general, according to them, till the thirteenth. M. Guérard finds a few hereditary *surnames* in the eleventh century, and many that were personal. The latter are not *surnames* at all, in our usual sense. A good many may be found in Domesday, as that of Burdet in Leicestershire, Malet in Suffolk, Corbet in Shropshire, Colville in Yorkshire, besides those with 'de,' which of course is a local designation, but became hereditary.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ii. and note.

2. Appellation added to the original name.

I never saw a nicer-looking old gentleman, or a better school, or heard a better sermon.' 'He used to preach those sermons in a *surplice*;' hissed out Mrs. Ponto. 'He's a Puseyite, Mr. Snob.' Under a hard one, the tenant revenges himself upon the land, and runs away with the rent. I would raise my rents to the present price of all commodities: for if we should let our lands, as other men have done before us, now other wares daily go on in price, we should fall backward in our estates.' These axioms of political economy were discoveries in his day.—*I. Disraeli, Curiosities of Literature, The Usurers of the Seventeenth Century.*

Surrejoínder. *s.* In *Pleading.* Answer on the part of the defendant to the replication of the plaintiff; Surrebutter being another.

When the defendant admits all or a part of the plaintiff's facts, but relies on certain other facts as exonerating him from the liability asserted by the plaintiff, he ought to state these facts in answer; for instance, in order to answer the claim of a debt, that it is barred by length of time, or that the defendant has a set-off to allege against it: this is termed a plea by way of confession and avoidance. To this the plaintiff may reply in his second statement, called a replication, either by denying the defendant's facts, i. e. a replication by way of traverse, or by alleging fresh ones; the defendant may deny these, or again allege fresh ones, in his rejoinder; sometimes a *surrejoinder,* a rebutter, and a *surrebutter* may be added; and the edifice of pleading is raised by stories gradually narrowing, by the exclusion of superfluous facts, until it reaches its summit in the production of one or more definite issues, either in law or fact, the decision of which finally arranges the dispute.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Surveíllance. [N.Fr.] Superintendence; watching over anything.

As the earl alluded to some particular displeasure which had been exhibited by De Valence on a late trivial occasion, his uncle's knowledge of this, and other minutiæ, seemed to confirm his idea that his own conduct was watched in a manner which he did not feel honourable to himself, or dignified on the part of his relative; in a word, he conceived himself exposed to that sort of *surveillance* of which, in all ages, the young have accused the old.—*Sir W. Scott, Castle Dangerous.*

In the reign of William Rufus, and down to that of Henry II., when the trial of writs of right by the grand assize was introduced, Hickes has discovered other instances of the original usage. Súture. *s.* [Lat. *sutura* = sewing; *suo* = I sew.]

1. Manner of sewing or stitching, particularly of stitching wounds.

Wounds, if held in close contact for some time, reunite by inosculation: to maintain this situation, several sorts of *sutures* have been invented; those now chiefly described are the interrupted, the glover's, the quilled, the twisted and the dry *sutures*, but the interrupted and twisted are almost the only useful ones.—*Sharp, Surgery.*

Sutures, by which I mean such as were made in the flesh with a needle and ligature, were much more frequently employed by the old surgeons than they are by the moderns. The best practitioners of the present day never resort to this method of holding the sides of a wound in contact, except in cases in which there is a real necessity for it, and other modes will not suffice.—*Cooper, Dictionary of Practical Surgery.*

The cranial *sutures* are commonly said to be five in number, of which three are termed serrated, the margins of the bones being, in a manner, dovetailed one into another; the remaining two are called squamous, as the bones merely overlap one another, like the scales of fishes. The serrated *sutures* are the coronal, lambdoidal, and the sagittal.—*J. Quain, Elements of Anatomy.* (Sharpey and Ellis.)

Súzerain. *s.* [N.Fr.] Supreme, or highest, lord; sovereign.

During the tenth and eleventh centuries it appears that alodial lands in France had chiefly become feudal: that is, they had been surrendered by their proprietors, and received back again upon the feudal conditions; or more frequently, perhaps, the owner had been compelled to acknowledge himself the man or vassal of a *suzerain*, and thus to confess an original grant which had never existed.—*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. ii.

Súzerainty. *s.* Jurisdiction of a suzerain.

The letter of Innocent to the Barons was no less lofty and commanding. . . . He urged them to make a virtue of necessity, themselves to renounce this inauspicious treaty, to make reparation to the King for all losses and outrages perpetrated against him. . . . 'For if we will not that he be deprived of his right, we will not have you oppressed, nor the kingdom of England, which is under our *suzerainty*, to groan under bad customs and unjust exactions.'—*Milman, History of Latin Christianity*, b. ix. ch. v.

To court, young wag, and wanton there thy fill!
R. Greene.

I'll warrant that was devised by some country *swads*.—*Lyly, Midas*, iv. 3.

Wrapt in his russet cloake lay downe to rest,
His badge of honour buckled to his legge,

And would have preyed upon this ornament.

Then that a worse man than an asse I see.
Taylor (the Water-poet): 1630.

And for the other, whoso he may be styled a young master, will not stick to impawne the Long Acre till he become like a snake who has casten his slough; a squeazed *swad* without either means, manners, or mannor.—*Braithwaith, Survey of History*: 1638.

'" Wer't not for us, thou *swad*," quoth he,
" Where wouldst thou fay to get a fee?
But to defend such things as thee
'Tis pity;
For such as you esteem us least,
Who ever have been ready prest
To guard you and your cuckoo's nest,
The City."'
The Counter Scuffle.

Arise, set to thy shoulder, and heave thy part, and then pray to me to help thee; and I will do the rest.—*Sir J. Harrington, Broad View of the Church of England*, p. 70: 1653.

When *swallows* fleet soar high and sport in air,
He told us that the welkin would be clear.
Gay, Shepherd's Week, Monday, 29.

This species [*swallow*] appears in Great Britain nearly twenty days before the martin, or any other of the *swallow* tribe. They leave us the latter end of September; and for a few days previous to their departure, assemble in vast flocks on house-tops, churches, and even trees, from whence they take their flight. It is not known that *swallows* fix their winter quarters in Senegal, and possibly they may be found along the whole Morocco shore. We are indebted to M. Adanson for this discovery, who first observed them in the month of October, after their migration from Europe, on the shores of that kingdom; but whether it was this species alone, or all the European kinds, he is silent. The name of chimney *swallow* may almost be confined to Great Britain; for in several other countries they choose different places for their nests. In Sweden, they prefer barns; so are styled there Ladu-swala, or the barn *swallow*; and in the hotter climates, they make their nests in porches, gateways, galleries, and open halls.—*Pennant, British Zoology*, vol. i. pp. 543–4.

The *swallow* is one of my favourite birds, and a rival of the nightingale; for he cheers my sense of seeing as much as the other does my sense of hearing. He is the glad prophet of the year—the harbinger of the season: he lives a life of enjoyment amongst the loveliest forms of nature: winter is unknown to him; and he leaves the green meadows of England in autumn for the myrtle and orange-groves of Italy, and for the palms of Africa.—*Sir H. Davy, Salmonia.*

The *swallow* is a periodical visitor to this country; and more records are preserved of its first appearance every season than that of any other bird. The average of many records and many seasons seems to give the 10th of April as the mean period of its arrival; and it remains more than six months in this country, frequently on its return revisiting the precise locality it had inhabited for seasons before. *Swallows* are occasionally seen earlier than the date here mentioned, even in a backward spring, the migration being influenced by the temperature of the country they proceed from.—*Yarrell, British Birds*, vol. ii. p. 242.

In Normandy, the *swallow* knows how to find upon the sea-beach a pebble which has the marvellous power of restoring sight to the blind. The peasants tell of a certain way of obtaining possession of this stone. You must put out the eyes of a *swallow's* young, whereupon the mother bird will immediately go in quest of the stone. When she has found it and applied it, she will endeavour to make away with the talisman, that none may discover it. But if one has taken the precaution to spread a piece of scarlet cloth below the nest, the *swallow*, mistaking it for fire, will drop the stone upon it.—*Baring Gould, Curious Myths of the Middle Ages, Second Series, Schamir.*

Man ... takes him home and roasts him—and the boa constrictor *swallows* him whole, shell and all, and consumes him slowly in the interior; as the Court of Chancery does a great estate.—*Sydney Smith, Review of Warton's Wanderings in South America.*

A young lady of the Sandwich Islands even now will *swallow* half-a-dozen raw mackerel for breakfast without the smallest inconvenience to herself; and an Esquimaux will *swallow* a quantity of train oil that would turn the stomachs of a dozen English ploughmen.—*J. 2. Gulph; whirlpool.

Gurges ... Gouffre. A whirlepoole, a gulf, or *swallow.*—*Nomenclator.*

Swállow-tail. *s.*

1. Species of willow so called. *Obsolete.*

The shining willow they call *swallowtail*, because of the pleasure of the leaf.—*Bacon, Natural and Experimental History.*

2. Butterfly of the genus Papilio; see extract.

The *swallow-tail* butterfly is the largest of our indigenous butterflies, the female being sometimes found to measure upwards of three inches and a half between the tips of the wings. ... Although somewhat local in Britain, this species seems to be pretty widely diffused through the southern parts of England, and has been found as far north as Beverly in Yorkshire.... Numerous notices are on record of this species having occurred in Britain, but all of them have been found, on strict investigation, to be of so unsatisfactory a nature, as to leave it in some measure doubtful whether it is really indigenous.—*J. Duncan, British Butterflies*, in *Naturalists' Library.*

3. Swallow-tailed coat.

But ... you are safe in a *swallow-tail.*—*Lord Lytton, Pelham.*

Swállow-tailed. *adj.* Having a forked tail.

Swállower. *s.* One who, that which, swallows.

I have often considered these different people with

very great attention, and always speak of them with the distinction of the eaters, and *swallowers*. The eaters sacrifice all their senses and understanding to this appetite; the *swallowers* hurry themselves out of both, without pleasing this or any other appetite at all. The latter are improved brutes, the former degenerated men.—*Tatler*, no. 205. (Ord MS.)

Swamp. *s.* [A.S. *swam* = mushroom, fungus, sponge.] Marsh; bog; fen.

And Niagara stuns with thundering sound.

Swan. *s.* [A.S.] In *Ornithology*. Bird of the genus Anas, Anser, or Cycnus.

Shakespear, Romeo and Juliet, i. 2.

The fearful matrons raise a screaming cry,
Old feeble men with fainter groans reply;
A jarring sound results, and mingles in the sky,
Like that of *swans* remurmuring to the floods.
Dryden, Translation of the Æneid, xi. 692.

The idea, which an Englishman signifies by the name of *swan*, is a white colour, long neck, black beak, black legs, and whole feet, and all these of a certain size, with a power of swimming in the water, and making a certain kind of noise.—*Locke.*

So as they strayed, a *swan* they saw
Sail stately up and strong,
And by a silver chain she drew
A little boat along,
Whose streamer to the gentle breeze,
Long floating, fluttered light,
Beneath whose crimson canopy
There lay reclined a knight.
With arching crest and swelling breast,
On sailed the stately *swan*;
And lightly up the parting tide,
The little boat came on;
And onward to the shore she drew,
And leapt to land the knight,
And down the stream the little boat
Fell soon beyond the sight. *Southey, Rudiger.*

The wild *swan* is found at all seasons in Orkney; a few pairs build in the holms of the loch of Stenness. These, however, are nothing to the flocks that visit us in October from the more northern climates, their summer retreats. Part of these continue with us all the winter, and the rest go to Caithness, and the other northern shires of Scotland; in April they go off again to the northward, except the few which remain here for the summer. Like the wild geese, these birds fly in the fashion of a wedge, making a fine melodious clang, which has, perhaps, furnished one occasion to give a musical voice to this bird.... The most obvious difference, and that which will immediately strike the observer on comparing the representation of our mute, half-domesticated *swan* with those of the Hooper and Bewick's *swans*, is, that the two most conspicuous colours on the back occupy opposite situations in these species. In the Hooper and Bewick's *swans*, the anterior portion of the beak is black. The base, and the lore to the eye orange-yellow; but in our mute *swan* it is the anterior portion of the beak which is of a rich reddish orange, the base and the lore to the eye black, with a prominent black tubercle or knob on the upper part in front of the forehead, which in old males attains considerable size.—*Yarrell, History of British Birds*, vol. iii. pp. 209–10.

Take three pounds of beef, beat fine in a mortar,
Put it into the *swan*—that is, when you've caught her;
Some pepper, salt, mace, some nutmeg, an onion,
Will heighten the flavour in gourmand's opinion.
Then tie it up tight with a small piece of tape,
That the gravy and other things may not escape;
A meal paste, rather stiff, should be laid on the breast,
And some whity-brown paper should cover the rest.
Fifteen minutes at least ere the *swan* you take down,
Pull the paste off the bird, that the breast may get brown.
To a gravy of beef, good and strong, I opine,
You'll be right if you add half a pint of port wine;
Pour this through the *swan*, yes, quite through the belly,
And serve the whole up with some hot currant jelly.
N.B. The *swan* must not be skinned.
Norwich receipt for dressing a Swan, from Yarrell.

Swan-herd. *s.* One who tends swans.

No person having swans could appoint a *swanherd* without the king's swanherd's licence. Every *swanherd* on the stream was bound to attend upon the king's *swanherd* upon warning, or suffer fine. The king's *swanherd* was bound to keep a book of swanmarks, and no new marks were permitted to interfere with old ones. Owners of swans, and their *swanherds*, were registered in the king's *swanherd's* book. The marking of the cygnets was generally in the presence of all the *swanherds* on that stream, and on a particular day or days, of which all had notice. Cygnets received the mark found on the parent birds; but if the old swans bore no mark, the whole were seized for the king, and marked accordingly. No *swanherd* to affix a mark but in the presence of the king's *swanherd*, or his deputy.... In the language of *swanherds*, the male swan is called a cob, the female a pen.... The young during their first year are called cygnets; during the second gray-birds. Afterwards, their plumage being perfect, white swans. The black tubercle at the base of the beak is called the berry; and a swan without any mark on the beak is said to be clear-billed.—*Yarrell, History of British Birds.*

Swan-mark. *s.* Mark indicating the ownership of a swan.

The *swan-mark*, called by Sir Edward Coke, cignicnota, was cut in the skin on the beak of the swan with a sharp knife or other instrument. These marks consisted of annulets, chevrons, crescents, crosses, initial letters, and other devices, some of which had reference to the heraldic arms of, or the office borne by, the swan-owner.... The two nicks in the *swan-mark* of the Vintner's Company ... are probably intended for two half lozenges, or a demi-lozenge on each side.... Mr. Kempe appears to discountenance the popular notion that the sign of the 'Swan with Two Necks,' has any reference to the nicks in the *swan-mark* of this [the Vintner's] Company; but the sign has been considered a fair heraldic personification of the term, united as it is with the following considerations: that the swan has been for some hundred years identified with the Vintner's Company and its privileges; that the principal governing officers for the time being are, a master and three wardens, the junior warden of the year being called the swan warden; that models of swans form conspicuous ornaments in their hall, and that the first proprietor of the well-known inn, the 'Swan with Two Necks,' was a member of the Vintners' Company.—*Yarrell, History of British Birds.*

Swanhópping. *adj.* [*swan-upping.*] Annual excursion by the Lord Mayor of London *up* the Thames to inspect the swans: (the extracts are the authority for the derivation).

(Date, Hampton Court, July 30, 1523.)—*Mayland, To W. Moore, appointed by Lord Buckhurst Master of Swans, Surrey, from Yarrell.*

But this order must be kept that the *upping* of those *swans*, near or within the said branches of the Tems, may be *upped* all in one day with the *upping* of the Thames, which is referred to Mr. Maylard, of Hampton Courte, who hath the ordering of the Tems. And sees a *sweetheart* in the sacrifice.
Dryden, Translation of Juvenal, vi. 707.

Sweétheart, with a single accent, and that on the first syllable, is one thing. Sweét heárt with two accents at par is another. The difference between two separate words and a single word made up of two has been shown elsewhere; and the only question that now remains is whether *sweétheart* be an ordinary compound, or a derivative, like upmost and others, i. e. a derivative wearing the garb of a compound. It may be either. It may = heart + sweet, just as black bird = bird + black, or it may = sweet + art (as in braggart). In favour of this view is the German liebhart; a word with the same meaning. In the Low German, this would be a possible compound: inasmuch as, in Low German, hart = heart. In High German, however, the word is herz—and herz can scarcely give such a compound as liebhart.—*Dr. R. G. Latham, The English Language.*

Swifts and swallows have remarkably short legs, and their toes grasp any thing very strongly.—*Derham, Physico-Theology.*

I have just met with a circumstance respecting the *swifts*, which furnishes an exception to the whole tenor of my observations, ever since I have bestowed any attention on that species of Hirundines. Our *swifts*, in general, withdrew this year (1781) about the first day of August, all save one pair, which in two or three days was reduced to a single bird. The perseverance of this individual made me suspect that the strongest of motives, that of an attachment to her young, could alone occasion so late a stay. I watched, therefore, till the twenty-fourth of August, and then discovered that under the eaves of the church she attended upon two young, which were fledge.., and now put out their white chins from a crevice. These remained till the twenty-seventh, looking more alert every day, and seeming to long to be on the wing. After this day they were missing at once, nor could I ever observe

them with their dam coursing round the church in the act of learning to fly, as the first broods evidently do. On the thirty-first, I caused the eaves to be searched, but we found only too callow dead *swifts*, on which a second nest had been formed.—*G. White, Natural History of Selbourne.*

The *swift* comes to this country from Africa, and most probably by the same route as that pursued by the swallow and the martin: it generally appears early in May, and without more variation than is observed in the arrival of the other species of this family; but the greater part of them leaving us again by the middle of August, their stay here seldom much exceeds three months.—*Yarrell, History of British Birds.*

Swifter. *s.* In *Navigation.* Rope so called. See extract.

Swifter [is] a rope used to confine the bars of the capstan in their sockets, whilst the men are turning it round; for which purpose it is passed through holes in the extremities of the bars, so as to strain them firmly together, like the spokes of a wheel; which operation is called swifting. *Swifter* is also a strong rope, sometimes used to encircle a boat lengthways, as well to strengthen and defend her sides, as to enable her the better to resist the impression of other boats which may run against her. It is usually fixed about ten inches below the boat's upper edge or gunwale.—*Falconer, Nautical Dictionary.* (Burney.)

Swiftfoot. *adj.* Nimble.

Swiftfoot. *s.* In *Ornithology.* Bird of the genus Cursorius (Europæus); cream-coloured plover; courser: (the present word seems to be a translation of the Latin, rather than a true vernacular term, the bird being a rare one; the French name, also, is *Courivite*).

Id., Translation from Ovid, Metamorphoses, b. i.

Man is the only animal that learns to *swim*, the brute creation having an aptitude more or less by instinct; the best example is exhibited by the motion of a frog on the surface of the water. When a man falls into deep water, he will rise to the surface by floatage, and will continue there if he do not elevate his hands. If he move his hands in any manner he pleases, his head will rise so high as to allow him free liberty to breathe; and if he move his legs as in the action of walking, or rather walking up stairs, his shoulders will rise above the water; so that he may use less exertion with his hands, or apply them to other purposes. By these plain directions, there is not the least doubt but that any person would *swim* tolerably well; and when once the ability to support one's-self in the water is acquired, other changes of position and action are performed with facility. Doctor Franklin observes in his experiments and observations on this useful art:—1st. That the limbs and head of any human body are heavier than fresh water; the trunk is lighter merely because the lungs are inflated. 2nd: That the head is heavier than sea-water, but the limbs and trunk are lighter. 3rd. That a person throwing himself on his back in sea-water, will float with his face clear, so as to breathe with ease. 4th. That in fresh water the legs will gradually sink, and the body will float in an erect posture. 5th. That in this posture, if the head be held in its natural position, the surface of the water will reach just above the nostrils. 6th. That if the head be leaned quite back, the nose and mouth will be always above the water and free for breathing, and the body will rise and fall on every such inspiration and expiration.—*Falconer, Nautical Dictionary.* (Burney.)

3. Glide along with a smooth or dizzy motion.

A hovering mist came *swimming* o'er his sight,
And seal'd his eyes in everlasting night. *Dryden.*

Pope.

Accompanied with a convulsive splash,
A solitary shriek, the bubbling cry
Of some strong *swimmer* in his agony.
Byron, Don Juan, ii. 53.

2. Protuberance in the leg of a horse.

As this animal [a species of Astropecten] is entirely unprovided with *swimming-organs*, and was found to be of such specific gravity as to sink immediately when placed in a jar of sea-water, it can scarcely have been taken up anywhere else than from the sea-bottom; and if this be admitted, it is obvious that at least 250 fathoms of the dredge-line must have been lying on that bottom.—*Dr. Carpenter, On Deep-sea Dredgings, Proceedings of the Royal Society*, December 17, 1868.

Rondeletius was the first to notice that the swimming or air-bladder was more constantly found in fresh-water fishes than in those of the sea; and Needham and Redi soon after pointed out the diversity of form in the *swimming-bladder* that prevailed in different species. Redi afterwards described the duct or tube by which this air-vessel communicates with the alimentary canal; and valuable additions to our knowledge on this subject have been since made by Monro, Lacépède, St. Hilaire, and Cuvier. —*Yarrell, History of British Fishes.*

Then he execrated the rogue who had *swindled* him,—but of course never considered whether his own projects had been right, when tried by a moral standard.—*Hannay, Singleton Fontenoy*, b. i. ch. ix.

[In a figurative sense [the German] *schwindel* is applied to dealings in which the parties seem to have lost their head, as we say, to have become dizzy over unfounded or unreasonable prospects of gain. To have been then a momentary man.
Dryden, Cleomenes, iv. 1.

Mean? Why, I mean to be off, to be sure. It won't do; I tell you it won't do. First of all, I knocked up myself and my horses, when they took for London, and now I have been stewed aboard a tender. I have wasted three stone at least. If I could have rid my match it would not have grieved me; and so, as I said before, I have *swapped* her for Nabob.—*Swapped* her! *Swapped* my daughter for a horse! Zounds, sir, what d'ye mean?—*G. Colman the elder, Jealous Wife*, v. 3.

That must destroy thee.
Shakespear, King Lear, iv. 6.

But the *sword*
Of Michael from the armoury of God
Was giv'n him temper'd so, that neither keen
Nor solid might resist that edge: it met
The *sword* of Satan with steep force to smite
Descending, and in half cut sheer; nor stay'd,
But with swift wheel reverse, deep entering shared
All his right side: then Satan first knew pain,
And writhed him to and fro convolved; so sore
The griding *sword* with discontinuous wound
Pass'd through him. *Milton, Paradise Lost*, vi. 320.

2. Destruction by war: (as, fire and *sword*).

The *sword* without, and terrour within.—*Deuteronomy*, xxxii. 25.

For civil deed and military.
Butler, Hudibras, i. 2, 759.

Swórdbreaker. *s.* See extract.

A very curious weapon called a *sword-breaker* was now used; it had a hilt, pommel, and guard; the blade was made in the fashion of a scimitar, the edge being deeply serrated. It contained a spring, by means of which the antagonist's sword was held fast as soon as it came within the teeth. By moving the hand a little the blade of the antagonist's weapon was broken, and he was either cut or stabbed with the *sword-breaker* at option.—*Fosbroke, Encyclopædia of Antiquities*, p. 896: 1840.

Against a *sworder.*
Id., Antony and Cleopatra, iii. 11.

Swórdfish. *s.* Fish of the genus Xiphias (gladius), so called from the swordlike prolongation of the snout: (as Gr. ξίφος and Lat. *gladius* = sword, the three names translate each other).

A *swordfish* small him from the rest did sunder,
That in his throat him pricking softly under,
His wide abyss him forced forth to spew. *Spenser.*

Malpighi observed the middle of the optick nerve of the *swordfish* to be a large membrane, folded, according to its length, in many doubles, like a fan. —*Derham, Physico-Theology.*

Our little fleet was now engaged so far,
That, like the *swordfish* in the whale, they fought:
The combat only seem'd a civil war,
Till through their bowels we our passage wrought.
Dryden, Annus Mirabilis, lxxix.

Some species, as, for example, the shark and pike, are predatory and ferocious: some, as the angler and the skate, are crafty: some, as the *sword-fish* and stickleback, are combative: some, as the carp and barbel, are peaceful, timid browsers: many fishes are social, especially at the season of oviposition: a few are monogamous and copulate; still fewer nidificate and incubate their ova.— *Owen, Lectures on Comparative Anatomy*, lect. viii.

Swórdknot. *s.* Ribbon, or tassel, attached to the hilt of a sword.

'Are Mr. Chollop and the class he represents an institution here? Are pistols with revolving barrels, *sword-sticks*, bowie-knives, and such things, institutions on which you pride yourselves?'—*Dickens, Martin Chuzzlewit*, ch. xxxiv.

O horrors... why have ye missed Sieur de Lamotte. Why not of him, too, made gallows-carrion? Will spear, or *swordstick*, thrust at him (or supposed to be thrust,) through a window of hackney-coach, in Piccadilly of the Babylon of fog, where he jolts disconsolate, not let out the imprisoned animal existence.— *Carlyle, Miscellaneous Essays, The Diamond Necklace.*

Gaping for breath amongst the slimy seggs;
And there a sort laid in a deadly *swound*,
Trod with the press into the mud and dregs.
Drayton, Barons' Wars, ii. 40. (Ord MS.)

Swouns. *interj.* Oath by God's wounds.

You, a young and handsome fellow, with high birth, a title, and the name of an estate, . . . to think of throwing your cards on the table when the game is in your very hand, running back to the frozen north, and marrying—let me see—a tall, stalking, blue-eyed, fair-skinned, bony wench, with eighteen quarters in her scutcheon, a sort of Lot's wife, newly descended from her pedestal, and with her to shut yourself up in your tapestried chamber! Ugh, gad! *Swouns*, I shall never survive the idea!' —*Sir W. Scott, The Fortunes of Nigel*, ch. x.

Sýbarite. *s.* Native of Sybaris, of the Greek town in the South of Italy; and, as such, a *proper*, rather than a *common* term. However, as the Sybarites were famous for their luxury and effeminacy, it, with its derivatives, has become *common* as well.

Sybarític. *adj.* Having the character of the Sybarites, in respect to their proverbial luxury, effeminacy, and voluptuousness; luxurious.

Sybarítical. *adj.* Sybaritic.

He should have hoped to match him in their *sybaritical* cloysters; where they abound with meat and drink and ease.—*Bishop Hall, Honour of the Married Clergy.*

Sýcamine. *s.* [from the Greek συκάμινος.] See under Sycomore: (used *adjectivally*).

If ye had faith as a grain of mustard-seed, ye might say unto this *sycamine* tree, Be thou plucked up by the root, and be thou planted in the sea; and it should obey you.—*Luke*, xvii. 6.

Sýcamore. *s.* [spelt with *a*.] Tree of the genus Acer (pseudoplatanus).

Sycamores with eglantine were spread,
A hedge about the sides and covering over head.
Dryden, The Flower and the Leaf, 72.

Sycamore is our Acer major; one of the kinds of maples; it is a quick grower.— *Mortimer, Husbandry.*

The indigenous origin of the *sycamore* has been doubted by many British authors, and indeed the earliest records we have, speak of it as a stranger, or tree that had been introduced. Turner, who wrote in 1551, and Gerard, in 1597, both mention it as such; and Ray speaks of it as a tree common to courtyards, churchyards, avenues, &c., about noblemen's houses; Sir J. E. Smith, also, in the 'English Flora,' states it to be 'not truly wild.' To differ from such authorities may seem presumptuous, but the circumstance of its always ripening seed in our ordinary seasons, and the facility with which it bears the most exposed situations, seem favourable to the supposition that in some parts of England it may be an indigenous plant. In Scotland, and the north of England, where it has long been a favourite tree, and where few residences of any note are without specimens of ancient *sycamores*, it has, no doubt been introduced, as it is only in situations where the operations of man are plainly to be traced that it is found of great age and size.—*Selby, History of British Forest Trees.*

Sýcomore. *s.* [spelt with *o*.] The extract from Brande notices the difference of spelling between this word and the name of the well-known British forest tree; the affinities of which are with the maples and the plane trees. The words are essentially the same; the better of the two forms being that which gives *o* in the second syllable. This is because the word is a Greek compound; *o* (omicron) in Greek, between the vowel which connects the two elements. These are σῦκον = fig + μόρον = mulberry; the *sycomore* having, to some extent, the foliage of the fig, along with the fruit of the mulberry. Its botanical name is Sycomorus (originally Ficus) antiquorum.

The *a* in *Sycamore*, the English tree, serves as a distinction between the two; and so doing is conveniently retained.

Sycamine is the name of a third tree; of which the species is uncertain. It is formed like κυκλαμῖνον = cyclamen and is a derivative rather than a compound; i.e. -μινον cannot be found as a separate and independent word; and the connecting vowel is not *o* but *a*. Here, then, this latter letter is in its proper place, in which it may have helped to fix the spelling in *Sycamore*.

This tree [the *sycamore*] is to be distinguished from the *sycomore* of the Bible (Luke xix.), which is a species of fig, though probably the name originated in some confusion of ideas as to the identity of both. Indeed, in old books what is now universally called *sycamore* was sometimes written *sycomore*, while the *sycomore* fig is in some modern versions of the Bible printed *sycamore*.— *Brande and Cox, Dictionary of Science, Literature, and Art.*

Sýcophancy. *s.* Practice of a sycophant.

a. As an informer.

One that best knew it [the condition of the collectors or farmers of taxes] branded it with polling and *sycophancy*.— *Bishop Hall, Contemplations, Matthew called.*

b. As a flatterer.

The *sycophancy* of A. Philips had prejudiced Mr. Addison against Pope.—*Warburton, Note on Pope's Fourth Pastoral.*

Sýcophant. *s.* [Gr. συκοφάντης, from σῦκον = a fig, and φαίνω = show, denounce. To export *figs* from Athens was forbidden by law; and they who *informed* against persons disregarding this law were called *sycophants*.] Talebearer; makebate; malicious parasite.

Accusing *sycophants*, of all men, did best sort to his nature; but therefore not seeming *sycophants* because of no evil they said, they could bring any new or doubtful thing unto him, but such as already he had been apt to determine; so as they came but as proofs of his wisdom, fearful and more secure, while the fear he had figured in his mind had any possibility of event.—*Sir P. Sidney.*

Men know themselves void of those qualities which the impudent *sycophant*, at the same time, both ascribes to them, and in his sleeve laughs at them for believing.—*South, Sermons.*

The laws of Draco at Athens punished it [theft] with death: but his laws were said to be written in blood; and Solon afterwards changed the penalty to a pecuniary mulct. And so the Attic laws in general continued; except that, once in a time of dearth, it was made capital to break into a garden and steal figs: but this law and the informers against the offence grew so odious, that from them all malicious informers were styled *sycophants*; a name which we have much perverted from its original meaning.—*Sir W. Blackstone, Commentary on the Laws of England*, b. iv. ch. xvii.

Sýcophant. *v. a.* Calumniate. *Rare.*

He makes it his first business to tamper with his reader by *sycophanting* and misnaming the work of his adversary. — *Milton, Apology for Smectymnuus.*

Sýcophantic. *adj.*

Henry the Eighth of England [was] led by the advice of some of his *sycophantical* popish prelates. —*Sir Simonds D'Ewes, Primitive Practice for Preserving Truth*, p. 62: 1645.

They... suffered themselves to be cheated and ruined by a *sycophantical* parasite.—*South, Sermons*, viii. 192.

Sýcophanting. *part. adj.* Sycophantic.

His *sycophanting* arts being detected, that game is not to be played the second time; whereas a man of clear reputation, though his barque be split, has something left towards setting up again.—*Dr. H. More, Government of the Tongue.*

Sýcophantize. *v. n.* Play the talebearer.

To *sycophantize* is to play the sycophant, or slander, or accuse falsely, to deal deceitfully.— *Blount, Glossographia.*

Sýcophantry. *s.* Malignant tale-bearing.

It is fit that the accused should be acquainted with this, that competent time and means may be allowed for his defence, that his plea should receive, if not a favourable, yet a free audience; the contrary practice is indeed rather backbiting, whispering, supplanting, or *sycophantry* than fair and lawful judging.—*Barrow, Sermons*, vol. i. serm. xx.

Sycósis. *s.* [Gr. σῦκον = fig.] In *Medicine.* Cutaneous, or skin, disease so called.

Sycosis [is] a chronic pustular eruption, either scattered singly, or clustered, over the chin, upper lip, or lateral parts of the face; the pustules being pointed, and seated chiefly in the hair-follicles and connected tissues, and being sometimes propagated by contagion.—*Copland, Dictionary of Practical Medicine.*

Syénite. *s.* In *Geology.* See extract.

Granite is a rock composed of variable proportions of felspar, quartz, and mica, intimately joined together, often separately crystalline, and without any base or ground. Felspar is usually the predominating rock, but it is sometimes equalled in quantity by quartz. In some varieties the quartz is wanting, and sometimes the mica; while occasionally this latter ingredient is replaced by hornblende, in which case the mass is called *syenite* . . . (so called from the ancient Egyptian quarries at Syene; the beautiful red granite, of which the Egyptian statues, and other sculptures, are made, is a *syenite*), and sometimes by talc, or a peculiar form of that mineral called chlorite; and in this latter state it has received the name of protogine, and is very abundantly exhibited in the higher peaks of Mont Blanc.—*Ansted, Geology, Introductory, Descriptive, and Practical,* pt. ii. ch. xiv.

Syll-, as the first syllable in composition. See under Syn-.

Sýllabe. *s.* Syllable: (used more than once by B. Jonson, as in the extract).

A *syllabe* is a part of a word that may itself make a part of a sound.—*English Grammar,* ch. vi. (Nares by H. and W.)

Syllábic. *adj.* Relating to syllables.

In the responses also, which are noted for various voices, this *syllabic* distinction is sufficiently attended to.—*Mason, Three Essays on Church Music,* p. 95.

I don't pretend to determine whether the rhythm, in the change which the language has undergone, could have been equally well marked by the ancient *syllabic* quantity. But rhyme appears to have owed its origin to some feeling of its expediency.—*Berrington, Literary History of the Middle Ages,* b. v.

Syllábical. *adj.* Relating to syllables; consisting of syllables.

The Christians have marked every the least various lection, even *syllabical.*—*Leslie, Truth of Christianity demonstrated.*

Syllábically. *adv.* In a syllabical manner.

These and many like places, well considered, (upon which no brand of lie or falsity may be fixed,) though they do not literally and *syllabically* agree with the quotation, (but are verified either in a partial or concurrent sense,) may sufficiently justify that place in the first front of the Liturgy to be no lie, but a divine scriptural truth.—*Bishop Gauden, Considerations on the Liturgy of the Church of England,* p. 25.

Sýllable. *s.* [Gr. *σύλλαβη*; Lat. *syllaba.*]

1. As much of a word as is uttered by the help of one vowel, or one articulation.

I heard
Each *syllable* that breath made up between them.
Shakespear, Othello, iv. 2.

The world confesses one Rome and one Cæsar,
And, as his rule is infinite, his pleasures
Are unconfined; this *syllable,* his will,
Stands for a thousand reasons.
Massinger, The Roman Actor, i. 1.

There is that property in all letters of aptness to be conjoined in *syllables* and words, through the voluble motions of the organs from one stop or figure to another, that they modify and discriminate the voice without appearing to discontinue it.—*Holder, Elements of Speech.*

2. Anything proverbially concise.

Abraham, Job, and the rest that lived before any *syllable* of the law of God was written, did they not sin as much as we do in every action not commanded?—*Hooker, Ecclesiastical Polity.*

To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day,
To the last *syllable* of recorded time;
And all our yesterdays have lighted fools
The way to dusty death.
Shakespear, Macbeth, v. 5.

He hath told so many melancholy stories without one *syllable* of truth, that he hath blunted the edge of my fears.—*Swift.*

Sýllable. *v. a.* Utter; pronounce; articulate.

Airy tongues that *syllable* men's names
On sands, and shores, and desart wildernesses.
Milton, Comus, 208.

Sýllabub. *s.* [see extract from Wedgwood. The comparative frequency of the spelling with *y* (*syllabub* rather than *sillabub*) is the only justification (if it is one) of the spelling as it stands here. *Sillabub,* the form of the entry in Wedgwood, is undoubtedly better. ' See under Syn-.]

No *syllabubs* made at the milking pail,
But what are composed of a pot of good ale.
Beaumont.

Two lines would express all they say in two pages; 'tis nothing but whipt *syllabub* and froth, without solidity.—*Felton.*

'Sister Beatrice,' continued the father, resuming his gravity, 'is indeed blessed with a winning gift of making comfits and *syllabubs*; but, on minute enquiry, I do not find that the youth has tasted any of them.'—*Sir W. Scott, Castle Dangerous.*

I am sorry to find here and every where people out of character, and that wine and tea should enter where they have no pretence to be, and usurp the rural food of *syllabub,* &c.—*Life and Correspondence of Mrs. Delany,* edited by *Lady Llanover,* vol. ii. p. 365.

[*Sillabub* [is] a frothy food to be slapped or slubbered up by milking from the cow into a vessel containing wine or spirits, spice, &c. 'And we will ga to the dawnes and slubber up a *sillabub.*' (Two Lancashire Lovers, in Halliwell.) The word is a corruption of *slap-up,* or *slub-up,* . . . and is the exact equivalent of Platt-Deutsch *slabb'ut,* Swiss *schabutz,* watery food, spoonmeat, explained by Stalder as *schlabb uus,* from *schlappen, slabben,* to slap, lap, or sup up food with a certain noise. *Schlabbete, schlappete,* weak soup. . . . On the same principle are formed Provincial English *slubber,* anything of a gelatinous consistency, the spawn of toads or frogs; *slub,* wet and loose mud. (Halliwell.) Dutch *slemp* [*sillabub*] a certain drink made of milk, sugar, &c. [Bomhoff], is derived in like manner from *slempen,* Bavarian *slampen,* to lap, sup up, junket.—*Wedgwood, Dictionary of English Etymology.*]

Sýllabus. *s.* Abstract, or compendium, containing the heads of a discourse: (common as the title of a book).

A *syllabus* deals neither in development nor in diversified example; and does not make the space occupied by any detail a measure of its importance as a part of the whole. I have omitted many subjects which are to be found in all the books, or dwelt lightly upon them, partly because more detail is contained in my Formal Logic, partly because any one who masters this tract will be able to judge for himself what I should have written on the omitted subjects. I have also endeavoured to remember that as a work of this kind proceeds, less detail of explanation is necessary.—*De Morgan, Syllabus of a Proposed System of Logic,* preface.

His public career was, from first to last, utterly inconsistent with the doctrines of the *syllabus* which form the political creed of modern Rome.—*Saturday Review,* May 22, 1869.

Syllépsis. *s.* [Gr. *λῆψις* = taking, from root (*λαβ-*) of *λαμβάνω* = I take.] In *Grammar.* See extract, where it will be seen that it is an approximate translation of *conception* (*con* = with + *capio* = I take).

Syllepsis, in grammar, [is] a figure by which we conceive the sense of words otherwise than the words import; and thus make our construction not according to the words, but the intention of the author.—*Rees, Encyclopædia.*

Sýllogism. *s.* [Gr. *συλλογισμός,* from *σὺν* + *λογισμὸς* = calculation, reckoning; *λογίζω* = reckon, reason; *λόγος* = word, doctrine, reason, principle.] In *Logic.* Argument composed of three propositions; as, 'Every man thinks; Peter is a man; therefore Peter thinks.' (This is the explanation of Johnson, which, so far as it goes, is accurate. It is only to the simplest, and the typical form of the syllogism that it applies. The analysis of the example, however, tells us that, while the *propositions* are *three,* the *terms* are *six,* each term being *repeated,* and repeated in *different* propositions. The *two* propositions which, between them, give us *all* the three terms —*man, Peter, thinks*—are the *premises*; the single one, in which only two of them appear—*Peter, thinks*—is the conclusion. Hence it is easy to see that the *third* term has served as a kind of measure for the other two. This, i.e. the term used in the premises, but omitted in the conclusion, is the *middle* term; and it is, probably, the one by which the syllogistic character of the argument is determined. It certainly brings together the other two, and, by so doing, explains the etymology. The extent to which the opinions of the chief authorities in Logic and Mental Philosophy take different views both of the value and the structure of the syllogism, is indicated by the numerous and perhaps overlong extracts).

A piece of rhetorick is a sufficient argument of logick, an apologue of Æsop beyond a *syllogism* in Barbara.—*Sir T. Browne.*

What a miraculous thing should we count it, if the flint and the steel, instead of a few sparks, should chance to knock out definitions and *syllogisms.*—*Bentley.*

That the power of reasoning (or, as it has been sometimes called, the discursive faculty) is implied in the powers of intuition and memory, appears also from an examination of the structure of *syllogisms.* It is impossible to conceive an understanding so formed as to perceive the truth of the major and minor propositions, and not to perceive the truth of the conclusion. Indeed, as in this mode of stating an argument the mind is led from universals to particulars, the truth of the conclusion must have been known before the major proposition is formed.—*Dugald Stewart, Elements of the Philosophy of the Human Mind,* p. 30: 1854.

Among the logicians an instrument of universal empire in the regions of intelligence was supposed to have been discovered by the invention of the *syllogism.* Yet in truth what is the exploit achieved by it? The dividing an argument into three parts or members, distinguished from each other by so many names—names in the invention of which, of two of them at least, not quite so much felicity has been displayed, as in those for which we are indebted to the genius of Lavoisier and Linnæus.—*Bentham, Rationale of Judicial Evidence,* b. iii. ch. x. § 4.

This retardation of the progress of reasoning is one circumstance which distinguishes the *syllogism*; but the absurdity which is implied in the very theory of it distinguishes it still more. It constantly assumes as the first stage of that reasoning by which we are to arrive at a particular truth, our previous knowledge of that particular truth. The major is the very conclusion itself under another form, and its truth is not more felt than that which it professes to develop. Thus to take one of the trifling examples which in books of logic are usually given, with a most appropriate selection, to illustrate this worse than trifling art—when, in order to prove that 'John is a sinner,' I do not adduce any particular sin of which he has been guilty, but draw up my accusation more irresistibly, by the major of a *syllogism,* 'All men are sinners.' 'John is a man,' therefore, 'John is a sinner.' If I really attached any meaning to my major proposition, 'All men are sinners,' I must at that very moment have felt as completely that John was a sinner, as after I had pursued him, technically, through the minor and conclusion.—*Dr. T. Brown.*

Not only is the deductive, thus, in a general way, dependent for its possibility on the inductive, *syllogism*; the former is, what has not been observed—in principle and detail—in whole and in part—in end and in means—in perfection and imperfection, precisely a counterpart or inversion of the latter. The attempts that have been made by almost every logician, except (perhaps?) Aristotle, to assimilate and even identify the two processes, by reducing the inductive *syllogism* to the schematic proprieties of the deductive, proceeding as they do on a total misconception of their analogy and differences, have contributed to involve the doctrine of logical induction in a cloud of error and confusion. The inductive inference is equally independent, and, though far less complex, equally worthy of analysis as the deductive; it is governed by its own laws; and, if judged aright, must be estimated by its own standard. The correlation of the two processes is best exemplified by employing the same symbols in our ascent through an inductive, and our re-descent through a deductive *syllogism.*

Inductive:	Deductive:
x, y, z are A;	B is A;
x, y, z, are (whole) B;	x, y, z are (under) B;
therefore B is A,	therefore x, y, z are A.
or	or
B contains x, y, z;	A contains B;
x, y, z constitute B;	B contains x, y, z;
therefore A contains B.	therefore A contains x, y, z.

These two *syllogisms* exhibit, each in its kind, the one natural and perfect figure.—*Sir W. Hamilton, Discussions on Philosophy and Literature,* p. 163: 1853.

Every conclusion is deduced in reality, from two other propositions (thence called premises); for though one of these may be, and commonly is suppressed, it must nevertheless be understood as admitted; as may easily be made evident by supposing the denial of the suppressed premiss, which will at once invalidate the argument; e.g. if any one from perceiving that 'the world exhibits marks of design,' infers that 'it must have had an intelligent author,' though he may not be aware in his own mind of the existence of any other premiss, he will readily understand, if it be denied, that 'whatever exhibits marks of design must have had an intelligent author;' that the affirmative of that proposition is necessary to the validity of the argument: or, again, if anyone on meeting with 'an animal which has horns on the head' infers that 'it is a ruminant,' he will easily perceive that this would be no argument to anyone who should not be aware of the general fact that 'all horned animals ruminate.' An argument thus stated regularly, and at full length, is called a *syllogism,* which therefore is evidently not a peculiar kind of argument, but only a peculiar form of expression, in which every argument may be stated. When one of the premises is suppressed,

which for brevity's sake it usually is, the argument is called an enthymeme.—*Archbishop Whately, Elements of Logic*, p. 26.

Language affords the signs by which these operations of the mind are not only expressed and communicated to others, but even, for the most part, carried on by ourselves. The notion obtained in an act of apprehension, is called, when expressed in language, a term; an act of judgment is expressed by a proposition; an act of reasoning by an argument which, when regularly expressed, is a *syllogism*, as e.g.

'Every dispensation of Providence is beneficial;
Afflictions are dispensations of Providence,
Therefore they are beneficial,'

is a *syllogism*; the act of reasoning being indicated by the word 'therefore.' It consists of three propositions, each of which has necessarily two terms, as 'beneficial,' 'dispensations of Providence.'—*Ibid.*, b. ii. ch. i. § 2.

A *syllogism* is the inference of the relation between two names from the relation of each of those names to a third. Three names therefore are involved, the two which appear in the conclusion, and the third or middle term, with which the names or terms of the conclusion are severally compared. The statements expressing the relations of the two concluding terms to the middle term, are the two premises. In this chapter, no ratio of quantities is considered except the definite All and the indefinite Some. A *syllogism* may be either simple or complex. A *syllogism* is simple when in it two simple propositions produce the affirmation or denial of a third: or the affirmation of a third, we may say, since every denial of one simple proposition is the affirmation of another. A complex *syllogism* is one in which two complex propositions produce the affirmation or denial of a third complex proposition. It might be supposed that we ought to begin with the simple *syllogism*, and from thence proceed to the complex. On this point I have some remarks to offer in justification of following precisely the reverse plan. Hitherto the complex *syllogism* has never made its appearance in a work on logic, except in one particular case, in which it is allowed to be treated as a simple *syllogism*, though most obviously it is not so. I allude to the common 'à fortiori' argument, as in 'A is greater than B, B is greater than C, therefore A is greater than C.' There is no middle term here: the predicate of the first proposition is 'a thing greater than B,' the subject of the second proposition is 'B.'—*De Morgan, Formal Logic*, ch. v.

Several of the usual *syllogisms* are more strong than need be in the premises, in order to produce the conclusion. . . . If we call a *syllogism* fundamental, when neither of its premises are stronger than is necessary to produce the conclusion, it is obvious that every fundamental *syllogism* which has a particular premise, gives at least as strong a conclusion when that particular is strengthened into a universal. But, except when strengthening the premise also enables us to strengthen the conclusion, in which case we have a new and different *syllogism*, it seems hardly systematic to mix up with fundamental arguments, *syllogisms* which have quantity or quality more than is necessary for the conclusion.—*Ibid.*

The last form of ideal judgements, which I have called the 'apodeictic' (e.g. This house, built in such or such a manner, is good or is not good), is already almost a *syllogism*; for a *syllogism* only serves to bring to light that which a judgement keeps hidden. We have, in fact, just seen that the general, the particular, and the individual, the union of which constitutes the proper essence of the idea, are implicitly contained in judgements, and more especially in the apodeictic judgement; whilst, on the contrary, these are explicitly enunciated in the form called *syllogism*, which openly displays all three of them; deriving them, however, from the anterior forms called notions and judgements, in which they were, so to speak, buried and concealed without the power of revealing themselves. The form, *syllogism*, then, is the development or product of the first form called notion, combining itself with the second form called judgement. It presents to us the idea become identical with reality, and arrived at that point in its evolution, at which the formal differences which still distinguished notions and judgements have disappeared in meeting with, or correcting, one another. Now, as we are able to say in the preceding chapter, that things are judgements realised, so with still stronger reason can we now say that they are living *syllogisms*. For *syllogism* is by no means one thing or idea amongst others; but, on the contrary, all things are *syllogisms*. So also, for the same reason that we have successively had a right to say that the absolute or God is a notion, and then that he is a judgement, we have now a right to say that he is a *syllogism*; or, in other words, that he is the general or universal, which, by means of the particular, becomes the individual.—*The Subjective Logic of Hegel*, translated by *H. Sloman and J. Walton*, ch. iii.

Syllogístic. *adj.* Having the nature of, constituted by, relating to, a syllogism.

Though the terms of propositions may be complex, yet where the composition of the whole argument is thus plain, simple, and regular, it is properly called a simple syllogism, since the complexion does not belong to the *syllogistick* form of it.—*Watts, Logick.*

Some writers, and Locke, who profess to despise what they call '*syllogistic* reasoning,' distinctly admit as Locke does, e.g. in ch. xvii. that 'all right reasoning may be reduced to the form of syllogism,' which is admitting the utmost that I conceive any logician maintains; only there are, he says, other and better 'ways of reasoning,' that is, as he proceeds to explain, people do not always or usually express their reasoning in a *syllogistic* form: as if anyone had ever doubted that.—*Whately, Elements of Logic*, b. i. § 2.

Of the *syllogistic* method, at least for the purpose of demonstration, or of teaching others, he seems to have entertained a favourable opinion, or even to have held it necessary for real demonstration, as his definition shows. Hobbes appears to be aware of what I do not remember to have seen put by others, that in the natural process of reasoning, the minor premise commonly precedes the major. It is for want of attending to this, that syllogisms, as usually stated, are apt to have so formal and unnatural a construction. The process of the mind in this kind of reasoning is explained in general with correctness, and, I believe, with originality.—*Hallam, History of Literature during the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. ii. § 151.

Novalis belongs to that class of persons who do not recognise the *syllogistic* method as the chief organ for investigating truth, or feel themselves bound at all times to stop short where its light fails them.—*Carlyle, Critical and Miscellaneous Essays, Novalis.*

All ratiocination, therefore, starts from a general proposition, principle, or assumption; a proposition in which a predicate is affirmed or denied of an entire class. The other premiss asserts that something belongs to or is included in the class respecting which something was affirmed or denied in the major premiss. It follows that the attribute affirmed or denied of the entire class may (if there was truth in that affirmation or denial) be affirmed or denied of the object or objects alleged to be included in the class: and this is precisely the assertion made in the conclusion. Whether or not the foregoing is an adequate account of the constituent parts of the syllogism will be presently considered; but, as far as it goes, it is a true account. It has accordingly been generalised and erected into a logical maxim. The maxim is, that whatever can be affirmed (or denied) of a class may be affirmed (or denied) of everything included in the class. This axiom, supposed to be the basis of the *syllogistic* theory, is termed by logicians the 'dictum de omni et nullo.'—*J. S. Mill, System of Logic*, vol. i. p. 234.

The inductive moralist looks at the history of past society, or at the condition of the present, and takes for granted that the first step is, to assemble the facts, and then to generalize them. The deductive inquirer, using the facts rather to illustrate his principles, than to suggest them, appeals, in the first place, not to external facts, but to internal ideas, and he makes those ideas the major premiss of a *syllogistic* argument.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

Syllogístical. *adj.* Syllogistic.

Though we suppose subject and predicate, and copula, and propositions, and *syllogistical* connexions in their reasoning, there is no such matter: but the entire business is at the same moment present with them, without deducing one thing from another.—*Sir M. Hale, Origination of Mankind.*

Syllogístically. *adv.* In a syllogistic manner; in the form of a syllogism.

A man knows first, and then he is able to prove *syllogistically*; so that syllogism comes after knowledge, when a man has no need of it.—*Locke.*

Syllogizátion. *s.* Act of reasoning by syllogism.

From mathematical bodies, and the truths resulting from them, they passed to the contemplation of truth in general; to the soul, and its powers both of intuition and *syllogization*.—*Harris, Three Treatises*, notes, p. 265.

Sýllogize. *v. n.* Reason by syllogism.

Men have endeavoured to transform logick into a kind of mechanism, and to teach boys to *syllogize*, or frame arguments and refute them, without real knowledge.—*Watts.*

The gift of ratiocination and making syllogisms—I mean in man—for in superior classes of beings, such as angels and spirits, 'tis all done, may it please your worships, as they tell me, by intuition;—and beings inferior, as your worships all know—*syllogize* by their noses: though there is an island swimming in the sea (though not altogether at its ease) whose inhabitants, if my intelligence deceives me not, are so wonderfully gifted, as to *syllogize* after the same fashion.—*Sterne, Tristram Shandy*, vol. iii. ch. xl.

Sýllogizer. *s.* One who reasons by syllogism.

Every *syllogizer* is not presently a match to cope with Bellarmine, Baronius, Stapleton.—*Sir E. Dering, Speeches*, p. 150.

Sylph. *s.* [?] Fairy so called.

I should as soon expect to meet a nymph or a *sylph* for a wife or a mistress.—*Sir W. Temple, Essays.*

The light coquettes in *sylphs* aloft repair,
And sport and flutter in the fields of air.
Pope, Rape of the Lock, canto i.

Ye *sylphs* and *sylphids*, to your chief give ear,
Fays, fairies, genii, elves, and demons, hear.
Ibid. canto ii.

Then shall the *sylphs* and *sylphids* bright,
Mild genii all, to whose high care
Her virgin charms are given, in circling flight,
Skim sportive round thee in the fields of air.
Mason, To an Æolus's Harp, canto ii.

His first idea was, that a heated imagination had raised the image on which it doted into visible existence; . . . the third and abiding conviction, that it was Amy herself, paler, indeed, and thinner than in the days of heedless happiness, when she possessed the form and hue of a wood-nymph, with the beauty of a *sylph*; but still Amy, unequalled in loveliness by aught which had ever visited his eyes.—*Sir W. Scott, Kenilworth*, ch. xxvii.

'Ah!' cried Mr. Pecksniff, whose eyes had in the mean time wandered to the pupil; 'certainly. And how do you do my very interesting child?'—'Quite well, I thank you, sir,' replied that frosty innocent. 'A sweet face this, my dears,' said Mr. Pecksniff, turning to his daughters. 'A charming manner!'—Both young ladies had been in ecstasies with the scion of a wealthy house (through whom the nearest road and shortest cut to her parents might be supposed to lie) from the first. Mrs. Todgers vowed that anything one quarter so angelic she had never seen. 'She wanted but a pair of wings, a dear,' said that good woman, 'to be a young syrup:' meaning, possibly, young *sylph*, or seraph.—*Dickens, Martin Chuzzlewit*, ch. ix.

Sylph [is] the name given to the spirits of air in the fantastic nomenclature of the Rosicrucians and Cabalists. The use which Pope has made of this fancy in his 'Rape of the Lock' is well known. He seems to have borrowed it from the enigmatical romance called the 'Count de Gabalis.'—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Sýlphid. *s.* Diminutive of Sylph; sylph-like being.

(For extracts see under Sylph.)

Sýlphlike. *adj.* Resembling, light or airy as, a sylph.

Sometimes a dance (though rarely on field days,
For then the gentlemen were rather tired)
Display'd some *sylph-like* figures in its maze;
Then there was small-talk ready when required;
Flirtation—but decorous; the mere praise
Of charms that should or should not be admired.
The hunters fought their fox-hunt o'er again,
And then retreated soberly—at ten.
Byron, Don Juan, xiii. 108.

At this juncture a smartish ringing at the gate-bell aroused the attention of the ladies, who began putting their faces into the most amiable shape, expecting their *sylph-like* visitors; but they were somewhat disappointed, and perhaps more surprised, when the servant, throwing open the door, announced 'Mr. Daly.'—*Theodore Hook, Gilbert Gurney*, vol. i. ch. iv.

Sýlvan. *adj.* [Lat. *sylvanus*; *sylva* = wood, forest.] Woody; shady; relating to woods.

Cedar and pine, and fir and branching palm,
A *sylvan* scene! and as the ranks ascend,
Shade above shade, a woody theatre
Of stateliest view. *Milton, Paradise Lost*, iv. 139.

Enough for me that to the listening swains,
First in these fields, I sang the *sylvan* strains.
Pope, Windsor Forest.

In general the relation between the adjective and its correlative is less clear and definite than it would be if the connexion were manifest on the face of the word, as it is less clear and definite than it would be if the connexion were manifest on the face of the word as it is in Latin or German. Hence in our Latin adjectives, which are thus less decidedly relative, we often obtain new shades of meaning and tinges of association which our language could not possess if it were less heterogeneous. Thus when Milton says

'Cedar and pine, and fir and branching palm,
A *sylvan* scene!'

we feel that the epithet implies a picturesqueness in the combination of the trees, while woody would, merely have repeated the assertion that they were there. In this way we possess a choice and copiousness, which those who are masters of our language know well how to use with advantage. A philologer might produce an instructive and probably an amusing illustration of this peculiarity, by constructing a synonymy, or comparison, of pure English adjectives with the proximate words of professed Latin origin; and by discriminating, with the aid of the best authors, the shades of meaning that separate each pair; such, for instance, as feminine and womanly.—*Philological Museum, On English Adjectives.*

Sýlvan. *s.* Wood-god, or satyr; rustic

Her private orchards, wall'd on ev'ry side,
To lawless *sylvans* all access deny'd.
Pope, Vertumnus and Pomona

Sym-, as the first element in a compound. See under Syn-.

Sýmbol. *s.* [Lat. *symbolum*; Gr. *σύμβολον*, from *σύν* + *βάλλω* = I cast; the original meaning being a contribution to a feast, fund, or the like. See extracts under the first head, especially those that indicate its import in the Greek *σύμβολον* and Latin *symbolum* = creed.]

1. Contribution to a general fund. *Rare.*

This reckoning I will pay
Without conferring *symbols*.
B. Jonson, Epigrams.

Christ hath finished his own sufferings for expiation of the world, yet there are portions that are behind of the sufferings of Christ, which must be filled up by his body, the church, and happy are they that put in the greatest *symbol*; for in the same measure you are partakers of the sufferings of Christ, in the same shall ye be also of the consolation.—*Jeremy Taylor, The Faith and Patience of the Saints.*

In like manner he [Jeremy Taylor] employs *symbol* in the sense which the Greek *σύμβολον* sometimes had, namely, the contribution which each person at a pic-nic throws into the common stock.—*Archbishop Trench, On some Deficiencies in our English Dictionaries.*

1. The primary meaning of the verb *συμβάλλειν* expresses the act of several in constituting or throwing together portions to form a whole. Hence *σύμβολον* signified a treaty or agreement. It seems to be in this sense that the creeds are termed by early ecclesiastical writers *symbols*: either because (as Augustine says) all the fundamental doctrines of Christianity are collected in them; or from the old traditionary story, related by Rufinus, that the creed called the Apostles' Creed was formed by each of them contributing a sentence. 2. The mind may be said to put together outward appearances, and collect from them the notion of a thing signified by them; and hence the outward appearances themselves may be called *symbols*, signs, or emblems; while the act of the mind is termed conjecture (Lat. conjicio). Thus, the standards or military bodies were called by the Greeks *symbols*; as likewise omens and portents; and expressions or figures denoting a received meaning, as the Pythagorean *symbols*. In this sense, the early Christians gave the general name of *symbols* to all rites, ceremonies and outward forms bearing a religious meaning, to the sacraments and the sacramental elements, to the cross, and, in later times, to images and pictures. *Symbols*, properly so called, must be distinguished from types, and from mere symbolical attributes, such as the figures usually introduced in representations of the four Evangelists. Symbolical books are such books as contain the creeds and confessions of different churches: as the three creeds, received by all; the Confession of Augsburg, received by the Lutherans; the articles of the church of England, &c. The Germans call the study of the *symbols*, and mysterious rites of antiquity, and also the study of the history and contents of christian creeds and confessions of faith, by the name of symbolics (mythological or theological).—*Brande and Cox, Dictionary of Science, Literature, and Art.*

2. Abstract; compendium; comprehensive form.

Beginning with the *symbol* of our faith, upon that the author of the gloss enquires into the nature of faith.—*Baker.*

3. Type; that which comprehends in its figure a representation of something else.

Were't to renounce his baptism,
All seals and *symbols* of redeemed sin,
His soul is so enfetter'd to her love,
That she may make, unmake, do what she list.
Shakespear, Othello, ii. 3.

Salt, as incorruptible, was the *symbol* of friendship; which, if it casually fell, was accounted ominous, and their amity of no duration.—*Sir T. Browne, Vulgar Errours.*

Words are the signs and *symbols* of things; and as, in accounts, ciphers and figures pass for real sums, so words and names pass for things themselves.—*South, Sermons.*

The heathens made choice of these lights as apt *symbols* of eternity, because, contrary to all sublunary beings, though they seem to perish every night, they renew themselves every morning.—*Addison, Dialogues on the Usefulness of Ancient Medals.*

The privileges which these towns of France derived from their charters were surprisingly extensive; especially if we do not suspect some of them to be merely in confirmation of previous usages. They were made capable of possessing common property, and authorized to use a common seal as the *symbol* of their incorporation.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ii.

Let us examine and analyse such an example as:—'Every animal that has horns on the head is ruminant; the elk has horns on the head; therefore the elk is ruminant.' It will easily be seen that the validity (or 'conclusiveness,' or 'soundness') of the argument does not at all depend on our conviction of the truth of either of the premises; or even on our understanding the meaning of them. For if we substitute for one of the things we are speaking about, some unmeaning *symbol* (such as a letter of the alphabet), which may stand for anything that may be agreed on, the reasoning remains the same. For instance, suppose we say (instead of 'animal that has horns on the head'), 'Every X is ruminant; the elk is X; therefore the elk is ruminant;' the argument is equally valid. And again, instead of the word 'ruminant,' let us put the letter 'Y:' then the argument, 'Every X is Y; the elk is X; therefore, the elk is Y;' would be a valid argument as before. And the same would be the case if you were to put 'Z' for 'the elk;' for the syllogism 'Every X is Y; Z is X; therefore Z is Y,' is completely valid, whatever you suppose the *symbols* X, Y, and Z to stand for. Any one may try the experiment by substituting for X, Y, and Z, respectively, any words he pleases, and he will find that, if he does but preserve the same form of expression, it will be impossible to admit the truth of the premises, without admitting also the truth of the conclusion.—*Archbishop Whately, Elements of Logic*, i. § 4.

However, that class of cause-and-effect speculators, with whom no wonder would remain wonderful, . . . and even the Unknown, the Infinite in man's life, had under the words Enthusiasm, Superstition, Spirit of the Age, and so forth, obtained, as it were, an algebraical *symbol* and given value—have now well-nigh played their part in European culture. — *Carlyle, Critical and Miscellaneous Essays.*

4. Sign or badge to know one by; memorial.

That as a sacred *symbole* it may dwell
In her sonne's flesh to mind revengement.
Spenser, Faerie Queen.

Its towns may figure on our maps, its revenues, population, manufactures, political connexions, may be recorded in statistical books; but the character of the people has no *symbol* and no voice; we cannot know them by speech and discourse, but only by mere sight and outward observation of their manners and procedure. — *Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Another matter it is, however, when the object to be treated of belongs to the invisible and immaterial class; cannot be pictured out even by the writer himself, much less, in ordinary *symbols*, set before the reader.—*Ibid.*

5. Lot; sentence of adjudication.

The persons who are to be judged, even you and I and all the world, kings and priests, nobles and learned, the crafty and the easy, the wise and the foolish, the rich and the poor, the prevailing tyrant and the oppressed party, shall all appear to receive their *symbol*.—*Jeremy Taylor, Sermons*, p. 3: 1665.

Sýmbol. *v. a.* Symbolize. *Rare.*

So, *symbolled* forth in these twin and fair flowers which Eve saved for Earth out of Paradise, each with the virtue to heal or to strengthen, stored under the leaves that give sweets to the air;—here, soothing the heart when the world brings the trouble—here, recruiting the soul which our sloth or our senses enervate, leave we woman, at least, in the place Heaven assigns to her amidst the multiform 'Varieties of Life.'—*Lord Lytton, My Novel*, conclusion.

Symbólical. *adj.* Representative; typical; expressing by signs; comprehending something more than itself.

The sacrament is a representation of Christ's death, by such *symbolical* actions as himself appointed.—*Jeremy Taylor.*

Sextus now sends to his father for advice, which is given by the *symbolical* answer of decapitating the tallest poppies.—*Sir G. C. Lewis, An Enquiry into the Credibility of the Early Roman History*, ch. xi. sect. 34.

Symbólically. *adv.* In a symbolical manner; typically; by representation.

This distinction of animals was hieroglyphical, in the inward sense implying an abstinence from certain vices, *symbolically* intimated from the nature of those animals.—*Sir T. Browne.*

It *symbolically* teaches our duty, and promotes charity by a real signature and a sensible sermon.—*Jeremy Taylor.*

Sýmbolism. *s.* See extract.

Symbolism [is] the name applied to the system which invested the forms of Christian architecture and ritual with a symbolical meaning. The extent to which this *symbolism* was carried has been a subject of much controversy. Specimens of such interpretation may be found in the writings of Hugh of St. Victor; but the system was carried out to its utmost extent in the Rationale Divinorum Officiorum by Durandus, bishop of Mende, in the thirteenth century.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Sýmmetry. *s.* [Gr. *μέτρον* = measure.] Adaptation of parts to each other; proportion; harmony; agreement of one part to another.

She by whose lines proportion should be

Whom had that ancient seen, who thought souls made
Of harmony, he would at next have said
That harmony was she. *Donne.*

And in the *symmetry* of her parts is found
A pow'r, like that of harmony in sound. *Waller.*

Symmetry, equality, and correspondence of parts, is the discernment of reason, not the object of sense.—*Dr. H. More.*

Nor were they only animated by him, but their measure and *symmetry* were owing to him.—*Dryden.*

Not only the capacity for motion, but the aspect and *symmetry* of the body is preserved by the muscles being marshalled according to order; e.g. the mouth is holden in the middle of the face, and its angles kept in a state of exact correspondence, by two muscles drawing against and balancing each other.—*Paley, Natural Theology*, ch. ix.

Sympathétic. *adj.* Having mutual sensation; being affected either by what happens to the other; feeling in consequence of what another feels.

Who speak the kindest, and who write the best;
Your *sympathetick* hearts she hopes to move.
Prior, Epilogue to Lucius.

Morbid sympathies may be defined to be associated states of disordered function, or of diseased action; the disorder or disease of one system, or organ, or part, affecting other systems, organs, or parts, according to their organic connections, their functional relations, and their several tendencies, or acquired or constitutional predisposition; the consecutive *sympathetic* disturbance often being more prominently manifested than the original or efficient morbid condition, and thereby frequently concealing or masking this condition.—*J. Copland, M.D., F.R.S., Dictionary of Medicine.*

Sympathetic inks [are] liquids which are colourless or so slightly coloured that characters written with them are invisible till acted upon by some reagent. The best is a dilute solution of chloride of cobalt. Markings made with it become blue when the paper on which they are written is held in front of a fire, the slightly tinted pink hydrated salt then becoming anhydrous and deeply blue.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

In *Anatomy.* Term applied to that part of the nervous system represented by the Great Sympathetic nerve, supplying the stomach, connected with processes of nutrition, growth, and the like, rather than with ordinary sensation, and the transmission of stimulus to the muscles.

With her great master so to *sympathize.*
Milton, Odes, On the Morning of Christ's Nativity, 32.

The limbs of his body is to every one a part of himself: he *sympathises* and is concerned for them. —*Locke.*

Their countrymen were particularly attentive to all their story, and *sympathised* with their heroes in all their adventures.—*Addison, Spectator.*

Though the greatness of their minds exempts them from fear, yet none condole and *sympathize* more heartily.—*Collier.*

Meleager was soon informed of the language that had been used against him in the camp, and indignantly complained of it to Perdiccas, whom he probably suspected to be its secret author. But Perdiccas was so great a master of dissimulation, that he completely lulled his suspicions. He affected to *sympathise* deeply with his resentment, and proposed to arrest the agitators.—*Bishop Thirlwall, History of Greece,* ch. lvi.

Lady Everingham thoroughly understood the art of conversation, which, indeed, consists of the exercise of two fine qualities. You must originate, and you must *sympathize*; you must possess at the same time the habit of communicating and the habit of listening. The union is rather rare, but irresistible, —*B. Disraeli, Coningsby.*

2. Agree; fit.

Green is a pleasing colour, from a blue and a yellow mixed together, and by consequence blue and yellow are two colours which *sympathize.*—*Dryden, Translation of Dufresnoy's Art of Painting.*

Sýmpathizer. *s.* One who feels, or professes to feel, for, or with, another: (used, of late, with reference to common feeling or common action in *political* matters).

Can we expect them to respect a policy which indulges in inconsistencies like aiding the Turks to crush the Montenegrines, . . . or threatening the Italian *sympathisers* with our men-of-war, when the Herzegovinians in their agony appealed to them for aid against . . . their Turkish taskmasters; when, on the other hand, we all but aided these same Garibaldians in their expedition against a government, which . . . cannot well have been marked by characteristics worse than those assigned by Sir H. Bulwer to the rule of the Turk.—*Dr. H. Sandwith, Preface to Notes on the South Slavonic Countries of Austria and Turkey in Europe,* p. 12: 1865.

Sýmpathizing. *part. adj.* Feeling, or showing, sympathy; acting as a sympathiser.

It was made a crime to attend a dissenting place of worship. A single justice of the peace might convict without a jury, and might, for the third offence, pass sentence of transportation beyond sea for seven years. With refined cruelty it was provided that the offender should not be transported to New England, where he was likely to find *sympathising* friends.—*Macaulay, History of England,* ch. ii.

Sýmpathy. *s.* [Gr. *πάθος.*] Fellow feeling; mutual sensibility; quality of being affected by the affection of another.

A world of earthly blessings to my soul,
If *sympathy* of love unite our thoughts.
Shakespear, Henry VI. Part II. ii. 1.

You are not young; no more am I: go to, then, there's *sympathy*: you are merry, so am I; ha! ha! then there's more *sympathy*: you love sack, and so do I; would you desire better *sympathy?*—*Id., Merry Wives of Windsor,* ii. 1, letter.

But what it is,
The action of my life is like it, which I'll keep,
If but for *sympathy.* *Id., Cymbeline,* v. 4.

I started back;
It started back: but pleased I soon return'd;
Pleased it return'd as soon, with answering looks
Of *sympathy* and love.
Milton, Paradise Lost, iv. 462.

They saw, but other sight instead, a crowd
Of ugly serpents: horror on them fell,
And horrid *sympathy.* *Ibid.* x. 538.

Or *sympathy*, or some connatural force,
Powerful at greatest distance to unite,
With secret amity, things of like kind,
By secretest conveyance. *Ibid.* x. 246.

There never was any heart truly great and generous, that was not also tender and compassionate: it is this noble quality that makes all men to be of one kind; for every man would be a distinct species to himself, were there no *sympathy* among individuals.—*South, Sermons.*

Can kindness to desert like yours be strange?
Kindness by secret *sympathy* is tied;
For noble souls in nature are allied.
Dryden, Aurengzebe, iv. 1.

There are such associations made in the minds of most men, and to this might be attributed most of the *sympathies* and antipathies observable in them. —*Locke.*

Horrible forms,
What and who are ye? Never yet there came
Phantasms so foul thro' monster-teeming hell
From the all-miscreative brain of Jove;
Whilst I behold such execrable shapes,
Methinks I grow like what I contemplate,
And laugh and stare in loathsome *sympathy.*
Shelley, Prometheus Unbound.

It would be unfair to blame either those concerned in this commision, . . . or those high-spirited representatives of the people, whose patriot firmness has been hitherto commanding all our *sympathy* and gratitude, unless we could distinctly pronounce by what gentler means they could restrain the excesses of government.—*Hallam, View of the State of Europe during the Middle Ages,* pt. iii. ch. viii.

We may suspect that the partiality which the mind is apt to acquire for whatever it has made the subject of long investigation and study, especially if it be something which has been generally neglected, and perhaps in some instances a morbid *sympathy* with depression and defeat, which certain historical and philosophical speculators have in common with the readers and writers of sentimental novels, are at the bottom of much of this unavailing and purposeless lamentation.—*Craik, History of English Literature,* vol. i. p. 104.

The colonel . . . had an appearance of decided weakness. Some people would have thought it ridiculous: to Singleton it was painful, for his organization was of a character which entered into acute and intense *sympathy* with everything and everybody. Where the mass of people laughed at a person, Singleton suffered for him.—*Hannay, Singleton Fontenoy,* b. i. ch. iv.

2. In *Medicine.* Change of condition in one organ, or one part of the body coinciding with a change in some other part.

In 1824, I defined *sympathy* to be that state of an organ or texture having a certain relation to the condition of another organ or texture, in health and disease; or a related state of the vital manifestations or actions in different organs or textures, as when part is excited or affected, others are likewise affected or disordered. I then classed *sympathies* into the reflex and the direct; the former taking place through the instrumentality of the sensorium, the latter being independent of it, and occurring through means of the ganglial nerves, and chiefly of those which form communicating chords between the viscera, and of those which are distributed to the blood-vessels.—*Copland, Dictionary of Practical Medicine.*

Sýmpathy. *v. n.* Sympathize. *Rare.*

Pleasures that are not man's, as man is man,
But as his nature *sympathies* with beast.
Muses' Looking Glasse: 1638.
(Nares by H. and W.)

Symphónious. *adj.* Harmonious; agreeing in sound.

Up he rode,
Follow'd with acclamation and the sound
Symphonious of ten thousand harps, that tuned
Angelic harmonies. *Milton, Paradise Lost,* vii. 557.

How sweet a scene will earth become!
Of purest spirits, a pure dwelling-place,
Symphonious with the planetary spheres.
Shelley, Queen Mab.

Sýmphonize. *v. n.* Agree with; be in unison with.

I mean the law and the prophets *symphonizing* with the gospel.—*Boyle, Style of Holy Scripture,* p. 253.

Sýmphony. *s.* [Gr. *συμφωνία*; *φωνή* = voice, sound.]

1. Consonance or harmony of sounds.

A learned searcher from Pythagoras's school, where it was a maxim that the images of all things are latent in numbers, determines the comeliest proportion between breadths and heights, reducing symmetry to *symphony*, and the harmony of sound to a kind of harmony in sight.—*Sir H. Wotton.*

Speak, ye who best can tell, ye sons of light,
Angels! for ye behold him, and with songs
And choral *symphonies*, day without night,
Circle his throne rejoicing.
Milton, Paradise Lost, v. 160.

The trumpet's sound,
And warlike *symphony* is heard around;
The marching troops through Athens take their way;
The great earl-marshal orders their array.
Dryden, Palamon and Arcite, iii. 528.

2. Musical composition so called.

The interim may both with profit and delight be taken up, in recreating and composing their travailed spirits, with the solemn and divine harmonies of music heard or learnt; either while the skilful organist plies his grave and fancied descant in lofty fugues, or the whole *symphony* with artful and unimaginable touches adorn and grace the well-studied chords of some choice composer.—*Milton, Tractate on Education.*

There is, perhaps, no musical composition in which the power of the author is so completely developed as in a *symphony.* The musician in it becomes a poet, or perhaps rather a painter. Scenes and the passions are represented by a combination of musical sounds; as an illustration, we need only cite that spendid work of Beethoven known to all under the name of Il Pastorale. The general form of the *symphony* may be thus described: It opens with a short, serious, slow movement; this is followed by and forms a contrast to one of spirit and of a lively nature; then comes an andante varied, or an adagio or slow movement; a minuet with its trio follows; and the *symphony* usually closes with a lively rondo, or a finale of rapid motion.—*Brande and Cox, Dictionary of Science.*

Sýmphysis. *s.* [Gr. *σύμφυσις*; *φύω* = I become, am born, grow.] In *Anatomy.* Contact and partial junction of two bones, or joints, not admitting of motion.

Symphysis, in its original signification, denotes a connascency, or growing together; and perhaps is meant of those bones which in young children are distinct, but after some years unite and consolidate into one bone.—*Wiseman, Surgery.*

Sýmpiezometer. *s.* [Gr. *πιέζω* = I compress, press, strain + *μέτρον* = measure.] In *Physics.* Instrument for determining the pressure of anything through the ~~com~~*pression* (Latin *con* + *premo* = I press; so that the two compounds translate one another) of the object affected by it.

From the barometer the mind easily passes to the allied instrument of Adie, the *sympiesometer*, from *συμπιέζω*, I compress, and *μέτρον*, a measure. The object of these instruments is similar; and from the peculiarities of the construction of the latter, it is exceedingly well adapted for being used at sea. The principle of its construction is the power of the atmosphere to compress a column of air separated by a fluid which neither acts upon the confined gas, nor is acted upon by the external air. The instrument consists of a glass tube about 18 inches long, and 0.7 inch internal diameter, having an oval bulb above, and terminating in an open cistern below. Into the tube and bulb, hydrogen gas is carefully introduced, and into the cistern, oil of almonds, coloured red by alkanet root. The atmosphere raises the unctuous fluid, and thus the gas is compressed

according to the amount of external pressure. To provide against error from the changing bulk of gases under the influence of temperature, a thermometer and sliding scale are introduced, so that the instrument thus made is exquisitely sensible to atmospheric mutations, even more readily so, than the delicate mercurial barometer, but it is inferior to it for meteorological purposes, chiefly in consequence of absorption of the hydrogen by the oil.—*Thomson, Meteorology*, p. 452.

Sympósiac. *adj.* Relating to merry makings; happening where company is drinking together.

By desiring a secrecy to words spoke under the rose, we only mean in society and compotation, from the ancient custom of *symposiack* meetings to wear chaplets of roses about their heads.—*Sir T. Browne, Vulgar Errours.*

In some of those *symposiack* disputations amongst my acquaintance, I affirmed that the dietetick part of medicine depended upon scientifick principles.—*Arbuthnot.*

Sympósium. *s.* [Gr. συμπόσιον = drinking together, from the same root of πίω, πίνω = I drink; πόσις = drinking.] Feast; merry making; drinking together.

It appears that the company dined so very late, (in 1609,) as at half an hour after eleven in the morning; and that it was the fashion to ride to this polite *symposium* on a Spanish jennet, a servant running before with his master's cloak.—*T. Warton, History of English Poetry*, iv. 18.

Four days in a week I had a place, without invitations, at the hospitable tables of Mesdames Geoffrier and Du Bocage, of the celebrated Helvetius and of the Baron d'Holbach. In these *symposia* the pleasures of the table were improved by lively and liberal conversation; the company was select, though various and voluntary.—*Gibbon, Memoirs*, p. 79.

Sýmptom. *s.* [Gr. σύμπτωμα, συμπτώματος.]

1. Something that happens concurrently with something else, not as the original cause, nor as the necessary or constant effect.

The *symptoms*, as Dr. Sydenham remarks, which are commonly scorbutick, are often nothing but the principles or seeds of a growing, but unripe gout.—*Sir R. Blackmore.*

2. Sign; token.

Ten glorious campaigns are passed, and now, like the sick man, we are expiring with all sorts of good *symptoms*.—*Swift.*

It is important for us to understand that *symptoms* or *signs* of disease are never to be taken in the like sense with that in which the *signs* of external things are often regarded.... There is nothing that we call a *symptom* of a disease, which does not contain within itself much more than a mere *sign*. Heat, pain, redness, swelling, are called the *signs* of inflammation; but nature does not intend by them barely to intimate that inflammation exists; they are essentially connected with the processes she is carrying on. Thus at early dawn we point to the first glimmering in the east, and call it a *sign* of the rising sun; but it is more—it is an emanation from his beams. We look at the cloud above our heads, and say it is a *sign* of rain; but it is the gathering of the waters themselves.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. vi.

Symptomátic. *adj.* Relating to, connected with, having the character of, constituted by a symptom or number of symptoms.

The symptoms and signs by which the seats and natures of diseases are indicated, are first, vital or spontaneous, or strictly sympathetic and *symptomatic*; or second, physical or artificial.... In treating of the sympathetic and *symptomatic* manifestations of disease, or of symptoms more especially, I shall first notice those which appertain to the appearance and attitude of the body, and to the animal, locomotive, and sensory functions; secondly, those which belong to the respiratory and circulating organs; thirdly, those which are manifested by the digestive and assimilating organs; and, lastly, those which concern the urinary and sexual functions and organs.—*Copland, Dictionary of Practical Medicine.*

Symptomátical. *adj.* Symptomatic.

Symptomatical is often used to denote the difference between the primary and secondary causes in diseases; as a fever from pain is said to be *symptomatical*, because it arises from pain only; and therefore the ordinary means in fevers are not in such cases to be had recourse to, but to what will remove the pain; for when that ceases, the fever will cease, without any direct means taken for that.—*Quincy.*

By fomentation and a cataplasm the swelling was discussed; and the fever, then appearing but *symptomatical*, lessened as the heat and pain mitigated.—*Wiseman, Surgery.*

Symptomátically. *adv.* In a symptomatic manner; in the nature of a symptom.

The causes of a bubo are vicious humours abounding in the blood, or in the nerves, excreted sometimes critically, sometimes *symptomatically*.—*Wiseman, Surgery.*

Symptomatólogy. *s.* [Gr. λόγος = word, reason, doctrine.] In *Medicine.* Doctrine of symptoms.

Syn-, as an initial element in composition is the Greek σύν, the Latin *cum* = with. Before *p*, *b*, *f*, or *v* it becomes *m* (*symbol*); before *l* the result is a double *-l* (*syllable*, from σύν + the root of λαμβάνω = I take). Compounds with this initial constitute the greater part of the English words beginning with *sy*. With one or two exceptions (*syllabub* and *sylph*, both better spelt with *i*), all the words thus beginning are of Greek origin.

Sýnagogue. *s.* [Gr. συναγωγή.] Assembly of the Jews to worship.

As his custom was, he went into the *synagogue* on the sabbath-day.—*Luke*, iv. 16.

Go, Tubal, and meet me at our *synagogue*.
Shakespear, Merchant of Venice, iii. 1

William the Conqueror permitted great numbers of Jews to come over from Rouen, and to settle in England, about the year 1087. Their multitude soon increased, and they spread themselves in vast bodies throughout most of the cities and capital towns in England, where they built *synagogues*. There were fifteen hundred at York about the year 1189. At Bury in Suffolk is a very complete remain of a Jewish *synagogue* of stone, in the Norman style, large and magnificent. Hence it was that many of the learned English ecclesiastics of those times became acquainted with their books and language.—*Craik, History of English Literature*, vol. i. p. 159.

Synalépha. *s.* [Gr. συναλοιφή.] Contraction or excision of a syllable in a Latin verse, by joining together two vowels in the scanning or cutting off the ending vowel: (as, *ill' ego*).

Virgil, though smooth, is far from affecting it: he frequently uses *synalephas*, and concludes his sense in the middle of his verse.—*Dryden.*

Sýnarchy. *s.* [Gr. συναρχία.] Joint sovereignty.

The *synarchies* or joint reigns of father and son have rendered the chronology a little difficult.—*Stackhouse, History of the Bible.*

Synarthrósis. *s.* [Gr. ἄρθρον = joint.] Close conjunction of two bones.

There is a conspicuous motion where the conjunction is called diarthrosis, as in the elbow; an obscure one, where the conjunction is called *synarthrosis*, as in the joining of the carpus to the metacarpus.—*Wiseman, Surgery.*

Synáxis. *s.* [Gr. συνάγω = I lead, bring together.] Meeting of persons; congregation.

They celebrated their *synaxes* and communions in grots and retirements.—*Jeremy Taylor, Sermons*, p. 260: 1651.

Syncategoremátic. *s.* See extract.

Categoria is, in the first instance, an Accusation, the language from which it is derived being the Greek. To 'accuse' is 'to charge with'—'to impute to'—'to attach a certain character,' or even 'a characteristic'—'to mark'—'to define'—'to place in a class.' Hence, Category comes to mean 'class,' there or thereabouts. A word which can, by itself, form a term is called Categorematic. A word which cannot, by itself, form a term, but can, by itself, form a part of one, is called *Syncategorematic*—syn = with, and implying union or conjunction with other words. A word which, by itself, can form a term and something more (a predicate, for instance, and a copula) may be Hypercategorematic—hyper = over and implying excess.... Categorematic words are either nouns or pronouns.... Categorematic words by themselves and singlehanded, can form terms, i.e. either subjects or predicates or both. Hypercategorematic words are verbs. They can form, by themselves and single-handed, predicates and copulas at once. *Syncategorematic* words are adverbs and prepositions; to which add articles.—*Dr. R. G. Latham, Logic as applied to Language*, § 107.

Synchondrósis. *s.* [Gr. σὺν + χόνδρος = cartilage.] See extract.

Synchondrosis is an union by gristles of the sternon to the ribs.—*Wiseman, Surgery.*

Sýnchronal. *adj.* [Gr. σὺν + χρόνος.] Synchronic; synchronous.

That glorious estate of the church, which is *synchronal* to the second and third thunder.—*Dr. H. More, Exposition of the Epistles sent to the Seven Churches*, p. 141.

The things, that are found to be *synchronal*, have also a natural connexion and complication one with another.—*Dr. H. More, Mystery of Godliness*, p. 182.

Sýnchronal. *s.* That which happens at the same time, or belongs to the same time, with another thing.

The near cognation and colligation of those seven *synchronals* that are contemporary to the six first trumpets.—*Dr. H. More, Mystery of Godliness*, p. 182.

Synchrónical. *adj.* Happening together at the same time.

It is difficult to make out how the air is conveyed into the left ventricle of the heart, the systole and diastole of the heart and lungs being far from *synchronical*.—*Boyle.*

Sýnchronism. *s.* Concurrence of events happening at the same time.

The coherence and *synchronism* of all the parts of the Mosaical chronology, after the Flood, bear a most regular testimony to the truth of his history.—*Sir M. Hale.*

Sýnchronize. *v. n.* Concur at the same time; agree in regard to the same time.

The most genuine sense to me, is to *synchronize* with the history of that time wherein John lived.—*Dr. Robinson, Endoxa*, p. 104: 1658.

With this coin ends the series of uninscribed Icenian coins; I must, however, caution the reader against supposing that there is the slightest attempt at chronological arrangement in the plate just described. There are not at present any facts known on which to base such an arrangement; and all that can be said is, that coins of the types Nos. 1—11 have been found in hoards which also contained inscribed coins, such as are comprised in the preceding plate, which, therefore, these anepigraphous coins probably *synchronise*.—*J. Evans, The Coins of the Ancient Britons*, p. 403.

Sýnchronous. *adj.* Happening at the same time.

The variations of the gravity of the air keep both the solids and fluids in an oscillatory motion, *synchronous* and proportional to their changes.—*Arbuthnot, On the Effects of Air on Human Bodies.*

Here the murmur, which is one to the ear, may be two in fact. The two are made one by being both *synchronous* with the systole of the ventricle. In this case the murmur from the aortic orifice is direct, and that from the mitral is regurgitating. Or the summons thus conveyed in different directions, as they are two in fact, may be two to the ear. But then one must be *synchronous* with the diastole, the other with the systole of the heart.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*, lect. ii.

Sýnchysis. *s.* [Gr. χέω = I pour out; χύσις = pouring out. Compare with Lat. *fundo* = I pour out, pass. part. *fusus*; *fusio*, *-onis*; and *syn-chysis* and *con-fusion* translate one another.] Confusion; confused arrangement of words in a sentence.

The English translator hath expressed the sense, but not translated strictly to the words, by reason of the *synchysis* and involved and perplexed frajection being not well distinguished.—*Knatchbull, Annotations on the New Testament*, p. 133.

Sýncopate. *v. a.* Contract; abbreviate, by taking from the middle of a word. *Rare.*

The tyrant time, which hath swallowed many names, hath also in use of speech changed more by contracting, *syncopating*, curtailing, and mollifying them.—*Camden, Remains, Surnames.*

Syncopátion. *s.* Syncope.

Sýncope. *s.* [Gr. συγκοπή.]

1. In *Medicine.* Fainting fit.

The symptoms attending gunshot wounds are pain, fever, delirium, and *syncope*.—*Wiseman, Surgery.*

Alas for Sicily! rude fragments now
Lie scatter'd, where the shapely column stood.
Her palaces are dust. In all her streets
The voice of singing and the sprightly chord
Are silent. Revelry, and dance, and show,
Suffer a *syncope* and solemn pause;
While God performs upon the trembling stage
Of his own works his dreadful part alone.
Cowper, Task, Time-piece.

2. In *Grammar.* Contraction of a word by cutting off a part in the middle.

3. In *Music.* Division of a note, used when two or more notes of one part answer to a single one of the other.

Sýncopist. *s.* Contractor of words. *Rare.*

To outshine all the modern *syncopists*, and thoroughly content my English readers, I intend to publish a Spectator that shall not have a single vowel in it.—*Spectator.*

Sýncopize. *v. a.* Contract; abridge. *Rare.*

Whether to ascribe this to some modish affectation of times and humours, or more particularly to a poetical humour of *syncopizing* and contracting their words.—*Dalgarno, Deaf and Dumb Man's Tutor*, p. 114: 1680.

Sýncretism. *s.* [Gr. κρᾶσις = mixture.] See third extract.

They may, both alike, be symptoms of the same predominant disposition to that coalition-system in Christianity, for the expression of which theologians have invented or appropriated the term *syncretism*.—*S. T. Coleridge, Second Lay Sermon*, p. 398: 1839.

The true gospel spirit of toleration we should regard as a matron, a kind and gentle guardian indeed of the pure doctrine, but sedulous, but vigilant, but impatient of seducers. This *syncretism*, on the contrary, which the Laodiceans among us join in extolling so highly, shall nowhere hear from me other or better name than that of harlot, the offspring of a belief either slothful or ignorant of its own condition, and then the parent of worldly-mindedness, and with whom therefore neither sincere faith nor genuine charity will endure to associate.—*Id., Translation of Clementia Evangelica*, note.

What seems most his own [i.e. Bruno's], and I must speak very doubtfully as to this, is the *syncretism* of the tenet of a pervading spirit, an 'anima mundi,' which is itself an imperfect theism, with the more pernicious hypothesis of an universal monad, to which every distinct attribute, except unity, was to be denied.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, vol. i. p. 13: 1843.

Sýndic. *s.* Magistrate.

May it please you, that Dr. Gunning and Dr. Pearson may be your legal *syndicks* for you, and in your name, to treat and conclude with the said archbishop concerning his and your right and interest in the said books.—*Grace in the Senate of the University of Cambridge*, July 22, 1662.

They have two or three Greek *syndics* on the part of the people, to take care that the ancient laws of the island are observed.—*Pococke, Observations on Greece.*

Ramsay . . . inquired his way to the Golden Street, in which resided Mynheer Van Krause, *syndic* of the town, and to whom he had obtained his principal letters of introduction. The *syndic's* house was too well known not to be immediately pointed out to him.—*Marryat, Snarleyyow*, vol. ii. ch. viii.

Sýndrome. *s.* [Gr. συνδρομή.] Concurrent action; concurrence.

All things being linked together by an uninterrupted chain of causes, every single motion owns a dependence on such a *syndrome* of pre-required motors.—*Glanville, Scepsis Scientifica.*

Synécdoche. *s.* [Gr. συνεκδοκή.] Figure by which part is taken for the whole, or the whole for part.

Because they are instruments of grace in the hand of God, and by these his holy Spirit changes our hearts: therefore the whole work is attributed to them by a *synecdoche*; that is, they do in this manner the work for which God ordained them.—*Jeremy Taylor, Worthy Communicant.*

Synecdóchical. *adj.* Expressed by a synecdoche; implying a synedoche.

Should I, Lindamer, bring you into hospitals, and shew you there how many souls, narrowly lodged in *synecdochical* bodies, see their earthen cottages moulder away to dust, those miserable persons, by the loss of one limb after another, surviving but part of themselves, and living to see themselves dead and buried by piecemeal?—*Boyle, Seraphick Love.*

Synecdóchically. *adv.* In a synecdochical manner; according to a synecdochical way of speaking.

Thus did our Saviour rise from the dead on the third day properly; and was three days and three nights in the earth *synecdochically*.—*Bishop Pearson, Exposition of the Creed*, article v.

Sýndicate. *s.* Office, state, or jurisdiction of a syndic.

Since the being of the little council leads one to the *syndicate*, which is the chief honour of the state, this dignity is courted here with as active and solicitous an ambition, as appears elsewhere for greater matters.—*Bishop Burnet, Travels*, p. 10.

Sýndicate. *v. a.* Judge. *Rare.*

Some men must be intimidated and *syndicated* with commissions, before they will deliver the fruits of justice.—*Donne, Devotions*, p. 475.

Aristotle undertook to censure and *syndicate* his master, and all law-makers before him.—*Hakewill, Apology.*

Syndicátion. *s.* Judgment.

Feare of search and *syndication* may retaine officers within compasse of their duty.—*Time's Store-house*, p. 931. (Ord MS.)

Synerésis. *s.* [Gr.] In *Prosody.* Confluence of two syllables, originally separate, into one.

'Nor e'er would'—Aldus reads it 'ever-would'; but as this would hurt the metre, we have restored it to the genuine reading, by observing that *synæresis* which had been neglected by ignorant transcribers.—*Addison, Spectator*, no. 470. (Ord MS.)

Synérgist. *s.* [Gr. ἔργον = work.] See extract.

Melanchthon . . . was suspected [of having introduced] a doctrine said to be nearly similar to that called Semi-Pelagian, according to which, grace communicated to adult persons so as to draw them to God required a corresponding action of their own freewill in order to become effectual. Those who held this tenet were called *synergists*. It appears to have been the same, or nearly so, as that adopted by the Arminians in the next century.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. ii.

Synergístical. *adj.* Co-operating.

Luther's notions of the irresistible decrees, which he afterwards published in his book 'De servo arbitrio,' shocked both parties, and caused a kind of revolution on all sides. The papists raised an outcry against their own doctrine, when expressed in so unguarded a manner: and the Saxon divines, with Melancthon at their head, silently withdrew themselves from their master Luther in this point; and struck out, or rather adopted, another system, viz. the *synergistical*. On this system of the co-operation of grace and free-will, the Augustan Confession is wholly built.—*Dean Tucker, Apology for the Church of England*, p. 60: 1772.

Synneurósis. *s.* [Gr. νεῦρον = nerve.] See extract.

Synneurosis is when the connexion is made by a ligament. Of this in symphysis we find instances, in the connexion of the ossa pubis together, especially in women, by a ligamentous substance. In articulation, it is either round, as that which unites the head of the os femoris to the coxa; or broad, as the tendon of the patella, which unites it to the os tibiæ.—*Wiseman, Surgery.*

Sýnod. *s.* [Gr. σύνοδος; Lat. *synodus.*]

1. Assemby called for consultation: (it is used particularly of ecclesiastics).

The glorious gods sit in hourly *synod* about thy particular prosperity.—*Shakespear, Coriolanus*, v. 2.

Since the mortal and intestine jars
'Twixt thy seditious countrymen and us,
It hath in solemn *synod* been decreed,
To admit no traffick to our adverse towns.
Id., Comedy of Errors, i. 1.

The opinion was not only condemned by the *synod*, but imputed to the emperor as extreme madness.—*Bacon.*

Flea-bitten *synod*, an assembly brew'd
Of clerks and elders ana, like the rude
Chaos of presbyt'ry, where laymen guide
With the tame woolpack clergy by their side.
Cleaveland.

His royal majesty, according to these Presbyterian rules, shall have no power to command his clergy to keep a national *synod*.—*White.*

Well have ye judged, well ended long debate,
Synod of gods! and, like to what ye are,
Great things resolved.
Milton, Paradise Lost, ii. 390.

The second council of Nice, he saith, I most irreverently call that wise *synod*; upon which he falls into a very tragical exclamation, that I should dare to reflect so much dishonour on a council.—*Bishop Stillingfleet.*

Parent of gods and men, propitious Jove!
And you; bright *synod* of the powers above,
On this my son your gracious gifts bestow. *Dryden.*

2. Conjunction of the heavenly bodies.

Howe'er love's native hours are set,
Whatever starry *synod* met,
'Tis in the mercy of her eye,
If poor love shall live or die. *Crashaw.*

Their planetary motions and aspects
Of noxious efficacy, and when to join
In *synod* unbenign. *Milton, Paradise Lost*, x. 659.

As the planets and stars have, according to astrologers, in their great *synods*, or conjunctions, much more powerful influences on the air than are ascribed to one or two of them out of that aspect; so divers particulars, which, whilst they lay scattered among the writings of several authors were inconsiderable, when they come to be laid together, may oftentimes prove highly useful to physiology in their conjunctions.—*Boyle.*

Sýnodal. *s.* Money paid anciently to the bishop, &c. at Easter visitation.

Synodals were [anciently] the publication or recital of the provincial constitutions in the parish churches.—*Wheatly, Rational Illustration of the Book of Common Prayer*, ch. iii. § 10.

The *synodals* to the bishop at Easter, is two shillings.—*T. Warton, History of the Parish of Kiddington*, p. 8.

Sýnodal. *adj.* Synodic. *Rare.*

The authority of some *synodal* canons.—*Milton.*

Synódic. *adj.* Reckoned from one conjunction with the sun to another.

The diurnal and annual revolutions of the sun to us are the measures of day and year; and the *synodick* revolution of the moon measures the month.—*Holder.*

Synódical. *adj.*

1. Relating to a synod; transacted in a synod.

The various dignity of their several churches, and of their many functions, rules, and orders in them, by reason of the frequency of their *synodical* and processional meetings, have necessarily raised many questions of place among them.—*Selden.*

St. Athanasius writes a *synodical* epistle to those of Antioch, to compose the differences among them upon the ordination of Paulinus.—*Bishop Stillingfleet.*

2. In *Astronomy.* Connected with the conjunction of heavenly bodies.

The moon makes its *synodical* motion about the earth in twenty-nine days twelve hours and about forty-four minutes.—*Locke, Elements of Natural Philosophy.*

The lunar month is determined by the recurrence of its phases; it reckons from new moon to new moon; that is, from leaving its conjunction with the sun to its return to conjunction. If the sun stood still, like a fixed star, the interval between two conjunctions would be the same as the period of the moon's sidereal revolution; but, as the sun apparently advances in the heavens in the same direction with the moon, only slower, the latter has more than a complete sidereal period to perform to come up with the sun again, and will require for it a longer time, which is the lunar month, or, as it is generally termed in astronomy, a *synodical* period. The difference is easily calculated by considering that the superfluous arc (whatever it be) is described by the sun with the velocity of 0°.98565 per diem, in the same time that the moon describes that arc plus a complete revolution, with her velocity of 13°.17640 per diem, and the times of description being identical, the spaces are to each other in the proportion of the velocities.—*Sir J. F. W. Herschel, Outlines on Astronomy.*

Synódically. *adv.* In a synodic manner; by the authority of a synod or public assembly.

It shall be needful for those churches *synodically* to determine something in those points.—*Bishop Sanderson.*

The alterations made by the commissioners were brought to the convocation, then sitting where they were *synodically* agreed upon.—*Nelson.*

Synónymal. *adj.* Synonymous.

Repetitions here, and doubled sentences, and enlargements by *synonymal* words, &c. before the shutting up of the period, are but necessary.—*Instructions for Oratory*, p. 95: 1682.

Synónymally. *adv.* Synonymously; in the way, after the manner of, as an equivalent to, a synonym.

The fifth canon uses *synonymally*.—*Sir H. Spelman.*

Synónymon. *s.* [Gr. ὄνομα = name.] Name which signifies the same thing with another: (Massinger uses it more than once; the Greek plural in *a*, was common in the time of the Elizabethan dramatists).

Every tinker for his chink may cry
Rogue, bawd, and cheater, call you by the surnames
And known *synonyma* of your profession.
B. Jonson, New Inn.

Sýnonyme. *s.* Word of the same meaning as some other word.

Most *synonymes* have some minute distinction.—*Reid.*

To interpret a language by itself is very difficult; many words cannot be explained by *synonymes*, because the idea signified by them has not more than one appellation; nor by paraphrase, because simple ideas cannot be described.—*Johnson, Preface to Dictionary.*

They could hardly be restrained from inflicting summary punishment on the few who still dared openly to question his title. Jacobite was now a *synonyme* for cutthroat.—*Macaulay, History of England*, ch. xxii.

God forbid that the time should ever come when [we] shall esteem riches the *synonym* of good.—*Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Synónymize. *v. a.* Express the same thing in different words.

This word fortis we may *synonymize* after all these fashions, stout, hardy, valiant, doughty, courageous, adventurous, brave, bold, daring, intrepid.—*Camden, Remains.*

Synónymous. *adj.* Expressing the same thing by different words; having the same signification; univocal.

These words consist of two propositions, which are not distinct in sense, but one and the same thing variously expressed; for wisdom and understanding are *synonymous* words here.—*Archbishop Tillotson.*

Fortune is but a *synonymous* word for nature and necessity.—*Bentley, Sermons.*

When two or more words signify the same thing, as wave and billow, mead and meadow, they are usually called *synonymous* words.—*Watts, Logick.*

First of parallel lines *synonymous*; that is, which correspond one to another by expressing the same sense in different but equivalent terms; when a proposition is delivered and is immediately repeated, in the whole or in part, the expression being varied, but the sense entirely or nearly the same: as,

O-Jehovah, in-thy-strength the-king shall-rejoice;
And-in-thy-salvation how greatly shall he exult!
The desire of-his-heart thou-hast-granted unto-him:
And-the-request of-his-lips thou-hast-not denied. (Psalm xxi. 1, 2.)

—*Bishop Lowth, Translation of Isaiah, Preliminary Dissertation.*

No other term can be found in our language which conveys precisely the same notion, and to this notion it is now so exclusively appropriated, that its literal import is seldom thought of. To use the word sublimity, in prose composition, as *synonymous* with altitude or height would be affectation and pedantry. —*Dugald Stewart.*

When we are told that the Arabians had fourscore words to signify Honey, two hundred a Serpent, five hundred a Lion, a thousand a Sword, and to illustrate each of which whole treatises were compiled, I must be allowed to withhold my assent from the philological prodigy. When a language is perplexed with *synonymous* words, these are known to have arisen from an intercourse with other nations, caused by conquest or by commerce: but it is said that the Arabians were never subjugated, and they lived in a state of independent seclusion.—*Berington, Literature of the Middle Ages*, appendix ii.

Cosmo of Medicis was the father of a line of princes whose name and age are almost *synonymous* with the restoration of learning.—*Craik, History of English Literature*, vol. i. p. 355.

Synónymously. *adv.* In a synonymous manner.

It is often used *synonymously* with words which signify any kind of production or formation.—*Bishop Pearson, Exposition of the Creed*, art. i.

Synónymy. *s.* Quality of expressing by different words the same thing.

We having three rivers of note, *synonymies* with her.—*Selden, Notes on Drayton's Polyolbion*, song ii.

Synópsis. *s.* [Gr. ὄπτομαι = I see] General view; all the parts brought under one view.

Breviaries, *synopses*, and other loitering gear.—*Milton, Areopagitica.*

He who reads the inscrutable book of Nature as if it were a merchant's ledger, is justly suspected of having never seen that book, but only some school *synopsis* thereof; from which, if taken from the real book, more error than insight is to be derived. —*Carlyle, Critical and Miscellaneous Essays, On History.*

Synóptical. *adj.* Affording a view of many parts at once.

We have collected so many *synoptical* tables, calculated for his monthly use.—*Evelyn, Kalendar.*

Synóptically. *adv.* In a synoptical manner.

I shall more *synoptically* here insert a catalogue of all dyeing materials.—*Sir W. Petty*, in *Bishop Sprat's History of the Royal Society*, p. 295.

Synostósis. *s.* [Gr. ὄστεον = bone.] In *Anatomy.* Junction of bones.

Synostótic. *adj.* Having the character of a synostosis: (in the extract, one resulting from the obliteration of sutures, and the confluence of two or more bones into one).

Synostotic and artificially deformed skulls are mostly included, for the reason specified, that their internal capacities are usually not materially interfered with.—*Dr. J. B. Davis, On the Weight of the Brain in the Different Races of Men, Proceedings of the Royal Society*, January 23, 1868.

Synóvia. *s.* [Gr. σύν + Lat. *ovum* = egg, a non-classical and hybrid word.] In *Anatomy.* Joint-oil.

Synovia is that fluid which exists within the membrane lining joints, to assist motion by lubrication; as also in the bursæ. . . . *Synovia* was chemically examined by Margeron. The specimen he analysed was viscid, and became gelatinous soon after it was obtained. It then deposited a fibrous matter and became clear above. . . . *Synovia* has, of late years, been examined by Jahn. It is described as a viscid, transparent, yellowish or reddish fluid, resembling in its odour the serum of the blood.—*Dr. Owen Rees* in *Todd's Cyclopædia of Anatomy and Physiology.*

Synóvial. *adj.* Having the character of, constituted by, synovia.

It is a matter of no small interest to consider how far the results of peculiar mechanical conditions are modified by variations in the character of lubricating fluids, knowing, as we do, that, while the ventricles of the brain, subject to agitation only, contain no albumen in their lubricating fluid, the liquor of the pericardium contains that principle in abundance; and that in the *synovial* fluid, adapted to the lubrication of the joints, we have in addition to albumen, not only a considerable proportion of phosphate of lime, but probably fibrin also, as a necessary constituent.—*Dr. Owen Rees*, in *Todd's Cyclopædia of Anatomy and Physiology.*

Synovial membranes, especially that of the knee-joint, are furnished with little fringe-like projections, which are extremely vascular, and which seem especially concerned in the secretion of the *synovial* fluid. The fluid of the serous cavities is so nearly the same as the serum of the blood, that the simple act of transudation is sufficient to account for its presence in their sacs; on the other hand, that of the *synovial* capsules, and of the Bursæ mucosæ which resemble them, may be considered as serum with from 6 to 8 per cent. of additional albumen.—*Dr. Carpenter, Principles of Physiology, General and Comparative*, § 167: 1851.

Syntáctical. *adj.*

1. Conjoined; fitted to each other.
2. Relating to the construction of speech.

A figure is divided into tropes, &c., grammatical, orthographical, *syntactical.—Peacham, Garden of Eloquence*, sign. B. i.: 1577.

The various *syntactical* structures occurring in the examples have been carefully noted; the licence or negligence with which many words have been hitherto used, has made our stile capricious and indeterminate; when the different combinations of the same word are exhibited together, the preference is readily given to propriety, and I have often endeavoured to direct the choice.—*Johnson, Preface to Dictionary.*

Sýntax. *s.* [Gr. τάξις = arrangement, order; τάσσω, τάττω = I arrange, dispose; second aorist, ἔ-ταγ-ον.]

1. System; number of things joined together.

They owe no other dependence to the first than what is common to the whole *syntax* of beings.—*Glanville.*

2. Part of grammar which teaches the construction of words.

I can produce a hundred instances to convince any reasonable man that they do not so much as understand common grammar and *syntax.—Swift.*

Syntáxis. *s.* Greek form of Syntax.

Words . . . have no power, save with dull grammarians,
Whose souls are nought but a *syntaxis* of them.
B. Jonson, Magnetick Lady.

Synterésis. *s.* [Gr. τηρέω = I watch, am anxious.] Remorse of conscience.

Though the principles of *synteresis*, the seeds of piety and virtue, scattered and disseminated in the soul, to bring forth the fruit of virtue and felicity, may be trampled on and kept under, cropped and snibbed, by the bestial part; yet they will sometimes be starting out, sprouting, and putting forth themselves.—*Bishop Ward, Sermon on the 30th of January*, p. 13: 1674.

Sýnthesis. *s.* [Gr. σύνθεσις; approximately translated by *composition* (*cum* + *pono*), and *construction* (*cum* + *struo*), its opposite being *analysis* or *dissolution* (Gr. ἀνά + λύω; Lat. *dis* + *solvo*), the two words translating each other.] Applied chiefly to the mode of treating certain scientific subjects, i.e. by beginning with the elements and constructing a system, *analysis* implying a system already formed, but which is taken to pieces. Every subject has its analytic and synthetic aspect; in some, however, one is so much more prominent than the other, that the generality of the correlation is overlooked.

The *synthesis* consists in assuming the causes discovered and established as principles, and by them explaining the phænomena proceeding from them, and proving the explanations.—*Sir I. Newton, On Optics.*

Synthesis has been the favourite method with philosophers since philosophy began. It is a method pleasing and wonderfully akin to the human mind; it enables the philosopher to indulge his own tastes, assume the principles he likes, and proclaim them as truths. Should anything adverse in experience arise, *synthesis* easily polishes it away, represses, or removes it. We are easily beguiled into the ideal games of *synthesis*; the race is easy. We fix one goal and bound between it and the starting-place.—*E. Swedenborg, Animal Kingdom*, translated by *W. White.*

Synthesis is a Greek word which signifies combination, and is applied to the chemical action which unites dissimilar bodies into a uniform compound; as sulphuric acid and lime, into gypsum; or chlorine and sodium into culinary salt.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The want of a clear notion respecting the nature of reason may be traced to the difficulty of combining the notion of the organ of sense, or a new sense, with the notion of the appropriate and peculiar objects of that sense, so that the idea evolved from this *synthesis* shall be the identity of both.—*Coleridge, Lay Sermon, Appendix B.*, note: 1839.

The idea of affinity, as already explained, implies a disposition to combine. But this combination is to be understood as admitting also of a possibility of separation. *Synthesis* implies analysis as conceivable: or to recur to the image which we have already used, divorce is possible when the marriage has taken place.—*Whewell, History of Scientific Ideas*, ii. 19.

Each of the words Idea, In, Mind, involves a *synthesis*; and the proposition—Ideas exist in mind, is a *synthesis* of *syntheses*. Passing from the assumptions of idealism to its argument, it might be shown that each of its syllogisms is a *synthesis* of *syntheses*; and that its conclusion, reached by putting together many syllogisms, is a *synthesis* of *syntheses* of *syntheses*. Instead, then, of the realistic belief being objectionable on the ground of its synthetic nature, its superiority is, that it is less open to this objection than any other belief which can be framed.—*Herbert Spencer, Principles of Psychology.*

Synthétic. *adj.* Constructive: (opposed to *analytic*. For its import in *Metaphysics* see extracts under Synthetical).

Synthetick method is that which begins with the parts, and leads onward to the knowledge of the whole; it begins with the most simple principles and general truths, and proceeds by degrees to that which is drawn from them or compounded of them; and therefore it is called the method of composition. —*Watts, Logick.*

The third sort of parallels I call *synthetic* or constructive—where the parallelism consists only in the similar form of construction; in which word does not answer to word, and sentence to sentence, as equivalent or opposite; but there is a correspondence and equality between different propositions, in respect of the shape and turn of the whole sentence, and of the constructive parts—such as noun answering to noun, verb to verb, member to member, negative to negative, interrogative to interrogative. —*Bishop Lowth, Translation of Isaiah, Preface.*

Synthétical. *adj.* Synthetic.

The fact is this; the category of causality includes the notion of a subject with two opposed states, an opposition of which time is the only solvent, so that time is presumed as the condition of its conceivability. By time, then, the communion of those states is rendered cogitable, and the resulting principle is therefore *synthetical.—Ingleby, An Introduction to Metaphysic*, b. ii. div. ii. § 135.

In all judgements wherein the relationship of a subject to a predicate is thought (if I only consider the affirmative, as the application to the negative is afterwards easy), this relationship is possible in two ways. Either the predicate B belongs to the subject B, as something which is contained in the conception A (in a covert manner), or B lies completely out of the conception A, although it stands in connexion with it. In the first case, I name the judgment analytical; in the other *synthetical*. Analytical judgments (the affirmative) are consequently those in which is conceived the connexion of the predicate with the subject, through identity; but those in which this connexion is conceived, without identity, should be named *synthetical* judgments. We might name the first also explicative, the other extending judgments, since the former add, by means of the predicate, nothing to the conception of the subject; but only through analysis divide this into its constituent conceptions, which were thought already in the same (although confusedly); whilst, on the contrary, the latter add a predicate to the conception of the subject which was never at all thought in it, and which through no analysis of the same could have been deduced. For example: 'All bodies are extended in an analytical judgment.' For I need not go out beyond the conception which I unite with body in order to find extension connected with it; but I only have to analyse the conception, that is, I only have to be acquainted with the diversity which I at all times think in it (the conception), therein to find this predicate. It is, therefore, an analytical judgment. On the contrary, when I say, 'All bodies are heavy;' this predicate is something quite other than that which I think in the mere conception of a body in general. The addition of such a predicate consequently gives a *synthetical*

judgment. Judgments of experience, as such, are all *synthetical*. For it were absurd to ground an analytical judgment upon experience; because I need not at all go out of my conception to form the judgment, and, consequently, I have no testimony of experience necessary for this purpose.—*Kant's Critick of Pure Reason*, translated by *F. Haywood*, introduction, p. iv.

Synthétically. *adv.* In a synthetical manner; by synthesis.

The plan proceeds *synthetically* from parts to the whole.—*Walker*.

Sýphilis. *s.* [?] Venereal disease.

Next to influenza, great destruction was caused by *syphilis*, constantly imported by 15,000 or 20,000 seamen, chiefly whalers, who landed in Honolulu and Lahaina. . . . Small-pox, also, caused great devastations in the interior, as well as the measles and *syphilis*.—*Collingwood, Translation of Waitz, Anthopology*, pt. i. s. ii.

Syphilític. *adj.* Connected with, relating to, constituted by, the venereal disease.

Syphilizátion. *s.* In *Medicine*. Inoculation of syphilitic matter: (a new name for a new doctrine).

Sýphon. *s.* See Siphon.

Sýriacism. *s.* Syriac phrase, or expression.

The New Testament, though it be said originally writ in Greek, yet hath nothing near so many Atticisms as Hebraisms and *Syriacisms*.—*Milton, Tetrachordon*. (Ord MS.)

Syrínga. *s.* In *Botany*. Generic name for the class to which the lilac (Syringa vulgaris) belongs; applied, as a popular name, to the Philadelphus coronarius.

Shrubs there are
Of bolder growth, that, at the call of Spring,
Burst forth in blossomed fragrance; lilacs robed
In snow-white innocence, or purple pride;
The sweet *syringa*, yielding but in scent
To the rich orange.
Mason, The English Garden, iii. 144.

Sýringe. *s.* [Gr. σύριγξ = reed, pipe.] Instrument through which any liquor is squirted.

The heart seems not designed to be the fountain or conservatory of the vital flame, but as a machine to receive the blood from the veins, and force it out by the arteries through the whole body as a *syringe* doth any liquor, though not by the same artifice.—*Ray*.

Sýringe. *v. a.* Spout by a syringe.

A flux of blood from the nose, mouth, and eye, was stopt by the *syringing* up of oxycrate.—*Wiseman, Surgery*.

Syrt. *s.* Syrtis. *Rare.*

The shattered mast,
The *syrt*, the whirlpool and the rock. *Young*.

Sýrtis. *s.* [Gr. σύρτις; Lat. *syrtis*; a *proper*, rather than a *common*, name, denoting certain quicksands on the north coast of Africa.] Quicksand.

A boggy *syrtis*—neither sea
Nor good dry land. *Milton, Paradise Lost*, ii. 939.

Sýrup. *s.* [Fr. *sirop*; Lat. *syrupus*; Italian, *siroppo*; Spanish, *jarabe*; from the Arabic root of *sherb-et* and *shrub*.] Juice of vegetables boiled with sugar.

Shall I, whose ears her mournful words did seize,
Her words in *sirup* laid of sweetest breath,
Relent? *Sir P. Sidney*.

Not poppy, nor mandragora,
Nor all the drowsy *sirups* of the world,
Shall ever med'cine thee to that sweet sleep,
Which thou owed'st yesterday.
Shakespear, Othello, iii. 3.

And first, behold this cordial julep here,
That flames and dances in his crystal bounds,
With spirits of balm, and fragrant *syrops* mixt.
Milton, Comus, 672.

Those expressed juices contain the true essential salt of the plant; for if they be boiled into the consistence of a *sirup*, and set in a cool place, the essential salt of the plant will shoot up on the sides of the vessels.—*Arbuthnot*.

Syrup is a solution of sugar in water. Cane-juice, concentrated to a density of 1·300, forms a *syrup* which does not ferment in the transport home from the West Indies, and may be boiled and refined at one step into superior sugar-loaves, with eminent advantage to the planter, the refiner, and the revenue.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

The criterion by which the negro boilers judge of the concentration of the *syrup* in the teache, is difficult to describe, and depends almost entirely on the sagacity and experience of the individual. Some of them judge by the appearance of the incipient grain on the back of the cooling ladle; but most decide by 'the touch,' that is, the feel and appearance of a drop of the *syrup* pressed and then drawn into a thread between the thumb and fore-finger. The thread eventually breaks at a certain limit of extension, shrinking from the thumb to the suspended finger, in lengths somewhat proportional to the inspissation of the *syrup*.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sýruped. *adj.* Sweet, like syrup; bedewed with sweets.

Yet, when there haps a honey fall,
We'll lick the *syrupt* leaves:
And tell the bees that theirs is gall. *Drayton*.

Sýrupy. *adj.* Resembling syrup.

Apples are of a *sirupy* tenacious nature.—*Mortimer, Husbandry*.

Sýstasis. *s.* [Gr. σύστασις.] Consistence of anything; constitution.

It is a worse preservative of a general constitution than the *systasis* of Crete, or the confederation of Poland, or any other ill-devised corrective which has yet been imagined in the necessities produced by an ill-constructed system of government.—*Burke, Reflections on the Revolution in France*.

Sýstem. *s.* [Fr. *système*; Gr. σύστημα.]

1. Complexure or combination of many things acting together.
2. Scheme which reduces many things to regular dependence or co-operation.
3. Scheme which unites many things in order.

He presently bought a *system* of divinity, with design to apply himself straightway to that study.—*Bishop Fell, Life of Hammond*.

Aristotle brings morality into *system*, by treating of happiness under heads, and ranges it in classes according to its different objects, distinguishing virtues into their several kinds, which had not been handled systematically before.—*Baker*.

The best way to learn any science is to begin with a regular *system*, or a short and plain scheme of that science well drawn up into a narrow compass.—*Watts*.

Sýstem-máker. *s.* One who forms systems.

We *system-makers* can sustain
The thesis, which you grant was plain.
Prior, Alma, iii. 330.

Sýstem-mónger. *s.* One fond of framing systems.

A *system-monger*, who, without knowing any thing of the world by experience, has formed a system of it in his dusty cell, lays it down, that flattery is pleasing.—*Lord Chesterfield*.

Systemátic. *adj.* Systematical.

The phenomenal portions of each science imply classification, for no description of a large and varied mass of phenomena can be useful or intelligible without classification. A representation of phenomena, in order to answer the purposes of science, must be *systematic*. Accordingly, in giving the History of Descriptive or Phenomenal Geology, I have called it *Systematic* Geology, just as Classificatory Botany is termed *Systematic* Botany. . . . In the history, I have pointed out Werner, William Smith, and Cuvier, as the three great authors of the *Systematic* Geology of Europe.—*Whewell, History of Scientific Ideas*, vol. ii. p. 266: 1858.

It is a remarkable evidence of this formative power of the German language, that it should have been able to produce an imitation of the *systematic* chemical nomenclature of the French school, so complete, that it is used in Germany as familiarly as the original system is in France and England.—*Id., Novum Organon Renovatum*, p. 322: 1858.

Systemátical. *adj.* Methodical; written or formed with regular subordination of one part to another.

It will be necessary, in a discourse about the formation of the world, to give you a brief account of some of the most principal and *systematical* phænomena that occur in it.—*Bentley*.

Now we deal much in essays, and unreasonably despise *systematical* learning; whereas our fathers had a just value for regularity and systems.—*Watts*.

Systemátically. *adv.* In a systematic manner; in form of a system.

I treat of the usefulness of writing books of essay, in comparison of that of writing *systematically*.—*Boyle*.

Aristotle brings morality into system, and ranges it into classes according to its different objects, distinguishing virtues into their several kinds, which had not been handled *systematically* before.—*Baker*.

He was accused of using his power *systematically* for the purpose of favouring the enemies and silencing the friends of the Sovereigns whose bread he ate.—*Macaulay, History of England*, ch. ix.

Systematist. *s.* One who reduces things to any kind of system.

Systematists in botany . . . arrange plants into certain orders, classes, or genera.—*Chambers*.

Systematizátion. *s.* Act of systematizing.

If viewed, analytically, all methods are simply complex intellectual processes. . . . If further, in the several instances above given, methods arose by the *systematization* and deliberate carrying out of mental operations which were before irregularly and unwittingly pursued, may we not fairly infer that all methods arise after this manner?—*Herbert Spencer, Principles of Psychology*, § 107.

Systematize. *v. a.* Reduce to a system.

Diseases were healed, and buildings erected, before medicine and architecture were *systematized* into arts.—*Harris, Philological Inquiry*.

Systematized. *part. adj.* Reduced to a system.

Systematized regicide.—*Burke, Letter on a Regicide Peace*.

Systematizer. *s.* Systematist.

Aristotle may be called the *systematizer* of his master's doctrines.—*Harris, Philological Inquiry*.

Systémic. *adj.* In *Medicine*. See extract.

Systemic is a word applied to designate the circulation of the general system, beginning at the left ventricle and aorta, and ending at the venæ cavæ and right auricle, as contradistinguished from the circulation through the lungs, which is called pulmonic. They have also been termed the greater and lesser circulations. The parts concerned in these circulations have also received the same names: thus, the left ventricle is called the *systemic* one.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Systole. *s.* [Gr. συστολή; συστέλλω = I place, or put together; i.e. I contract.] In *Anatomy*. Contraction.

The *systole* resembles the forcible bending of a spring, and the diastole its flying out again to its natural size.—*Ray*.

Morren has minutely described the circulating system of the earth-worm; in a species of which (Lumbricus variegatus) Bonnet saw the red blood propelled forward by the *systole* and diastole of the dorsal vessel towards the head, and noticed its accelerated course near that part.—*Owen, Lectures on Comparative Anatomy*, lect. xi.

The following are among the prominent facts which suggested, and taught, and established this doctrine of regurgitating murmurs. . . . In numerous well-watched cases, where a single murmur, constantly and uniformly coincident with the *systole* of the heart, had been heard during life, the valve at the entrance of the aorta, and this valve only, was found diseased after death. Here the murmur marked the time of the blood passing onward from the ventricle into the aorta, through an orifice only half open, which should be open altogether. This was no murmur of regurgitation. Again, in numerous cases, where a single murmur had been heard during life, but constantly and uniformly coincident with the diastole and not with the *systole* of the heart, still this same valve at the entrance of the aorta, and this valve only, was found diseased after death.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*.

Systólic. *adj.* In *Anatomy*. Connected with, relating to, constituted by, the systole.

It has been said, that the aortic orifice of the heart may be the seat of two murmurs, in consequence of disease of its valve; one *systolic*, from the blood in its direct course, the other diastolic, from the blood during regurgitation.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*.

Sýstyle. *s.* [Gr. στύλος = column, pillar.] In *Architecture*. Close intercolumniation.

Systyle, one of the five species of intercolumniation defined by Vitruvius. In this case there are four neutral points of either force. Those of the tangential force occur at the *syzygies*, and at the points of the disturbed orbit, which we call points of equidistance, equidistant from the sun and the disturbing planet, at which points, as we have shown, the total disturbing force is always directed inwards towards the sun.—*Sir J. Herschel, Outlines of Astronomy*, § 715.

2. In *Painting.* See extract.

By the word *tablature* we denote (according to the original word *tabula*) a work not only different from a mere portraiture, but from all those wilder sorts of painting, which are in a manner absolute and independent: such as painting in fresco upon the walls, the ceilings, the stair-cases, the cupolas, and other remarkable places either of churches or palaces. It is not merely the dimension of a cloth or board, which denominates a piece or *tablature*.—'Tis then, that in painting we may give to any particular work the name of *tablature*, when the work is in reality a single piece, comprehended in one view, and formed according to one single intelligence, meaning, or design.—*Lord Shaftesbury.*

two words rather than a true *compound* and *combination*.

Stale memorandums of the schools.
Swift, Miscellanies.

On these tablets, or *table-books*, Mr. Astle observes that the Greeks and Romans continued the use of waxed *table-books* long after the use of the papyrus, leaves, and skins became common; because they were convenient for correcting extemporaneous compositions; from these *table-books* they transcribed their performances correctly into parchment books, if for their own private use; but if for sale, or for the library, the 'librarii,' or scribes, performed the office. The writing on *table-books* is particularly recommended by Quintilian. ... His [Mattaire's] book of the dialects is a sad heap of confusion: the only way to write on them is to *tabulate* them with notes, added at the bottom of the page, and references.—*Dr. Johnson*, in *Boswell's Life.*

It was remarked by Niebuhr, in his History of Rome, that, 'according to the chronology of Fabius, the history from the founding to the taking of the city divides itself into two portions, 240 years under the kings, and 120 after them, or to express it differently, into three periods, each containing ten times twelve years, twelve being the number of the birds in the augury of Romulus. This scheme was the bed of Procrustes, to which whatever was known or believed about the early time was fitted.' The first part of the task was to *tabulate* the kings; and as these were seven in number, this was done by making the middle of the reign of the fourth king coincide with the middle of the whole period of twenty-four years assigned to all seven. To this king a reign of twenty-three years was given, because twenty-three, together with seventy-seven assigned (as being what was called the heroic secle) to Romulus and Numa, makes exactly 100, and because 132, the year *in* which his reign was thus made to close, was the number of the astronomical years in a secle. This chronology Niebuhr pronounces to be throughout 'a forgery and a fiction.' A fabrication of a similar kind, though far less complicated and ingenious, is found in the chronology of the Æscings, or founders of the kingdom of Kent, in which the events take place in an eight times repeated cycle of eight years, the ὀκταετηρίς of the Greeks.—*Cox*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Tácamahác, and **Tácamaháca.** *s.* In *Botany.* Secretion from the leaf-buds of the poplar and other trees: secretions of similar character. The name is sometimes given to the tree; e.g. the Tacamahac, or Tacamahac-tree.

Poplar buds, especially those of the Populus nigra, balsamifera, and candicans, are besmeared in winter with a resinous, balsamic, bitter, aromatic exudation, which, under the name of *tacamahac*, is said to be diuretic and antiscorbutic; they are also formed into an ointment for tumours, wounds, and burns, and are the basis of a balsam and tincture used for colic, &c.—*Lindley, The Vegetable Kingdom.*

The seeds of Calophyllum Inophyllum yield an oil, and a resin exudes from the roots, which is supposed by some authors to be the same as the *Tacamahaca* of the Isle of Bourbon. The true East India *Tacamahaca* is produced by C. Calaba; and Maynas resin is referred to the same species.—*Ibid.*

Tacamahac [is] a balsamic bitter resin, different varieties of which are attributed to Icica *Tacamahaca*, to Elaphrium tomentosum, and to Calophyllum Inophyllum. Tachómeter. *s.* [Gr. τάχος = speed + μέτρον = measure.] See extract.

Tachometer ... [is] a contrivance for the purpose of measuring the velocity of a moving body. When a vessel containing a fluid is whirled rapidly round a vertical axis, the centrifugal force produced by the whirling motion causes the fluid to recede from the axis, and to rise on the sides of the vessel, so that the surface of the fluid assumes a concave parabolic form; and the distance to which the centre of the surface falls below its original level is proportionate to the velocity of rotation, and is subject to corre-

sponding variations. Any method, therefore, of measuring or rendering visible the depression of the central surface, will indicate variations in the velocity of rotation, and an instrument constructed on this principle is sometimes employed to measure the velocity of machines. . . . Woltmann's *tachometer* . . . consists substantially of a small windmill set in the stream.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Again the 'Viper' *tacked.* She worked her sails as beautifully as a girl manœuvring a parasol. And now she lay on the larboard tack nearly up for the 'Patagonian's' stern.—*Ibid.* ch. vii.

2. Turn or manœuvre generally.

Bacon, with the servility of the courtier, when he found the wind in his teeth, *tacked* round, and promised Buckingham to promote the match he so much abhorred.—*I. Disraeli, Curiosities of Literature, Of Coke's Style, and his Conduct.*

Tack. *v. a.* [Italian, *attaccare*; Fr. *attacher.*]

1. Fasten to anything.

Of what supreme almighty pow'r
Is thy great arm, which spans the east and west,
And *tacks* the centre to the sphere! *G. Herbert.*

Frame so as to be covered with the hair-cloth, or a blanket *tacked* about the edges.—*Mortimer, Husbandry.*

2. Join; unite; stitch together.

I *tack'd* two plays together for the pleasure of variety.—*Dryden.*

3. Add a supplement to a bill in its progress through parliament.

A third gave utterance to a sentiment which it is difficult to understand how any assembly of civilised and Christian men, even in a moment of strong excitement, should have heard without horror. 'They object to *tacking*; do they? Let them take care that they do not provoke us to *tack* in earnest. How would they like to have bills of supply with bills of attainder *tacked* to them?'—*Macaulay, History of England*, ch. xxv.

Tack. *s.*

1. Addition; supplement: (specially in bills passing through parliament).

Some *tacks* had been made to money-bills in King Charles's time.—*Bishop Burnet, History of his Own Time.*

Only three days later, a strong party in the Commons, burning with resentment, proposed to tack the bill which the Peers had just rejected to the Land Tax Bill. This motion would probably have been carried, had not Foley gone somewhat beyond the duties of his place, and, under pretence of speaking to order, shown that such a *tack* would be without a precedent in parliamentary history.—*Macaulay, History of England*, ch. xxii.

2. Lease; bargain: (in use chiefly in Scotland, whence Tacksman).

Bear tack; *hold tack.* Last; hold out: (*tack* is still retained in Scotland, and denotes hold or persevering cohesion).

Martilmas beefe doth *bear* good *tacke*,
When countrey folke do dainties lacke.
Tusser, Five Hundred Points of good Husbandry.

If this twig be made of wood
That will *hold tack*, I'll make the fur

Tácke. *s.* [Dutch, *takel*; Welsh, *taclu.*]

1. Arrow; weapons; instruments of action.

And on the knight let fall a peal
Of blows so fierce, and press'd so home,
That he retired. *Butler, Hudibras*, i. 3, 823.

'Tush, man,' said Varney, 'never look at me with so sad a brow—you trap me not—nor am I in your power, as your weak brain may imagine, because I name to you freely the engines, the springs, the screws, the *tackle*, and braces, by which great men rise in stirring times.'—*Sir W. Scott, Kenilworth*, ch. v.

2. Ropes of a ship; in a looser sense, all the instruments of sailing.

After at sea a small ship did appear,
Made all of heben and white ivory,
The sails of gold, of silk the *tackle* were,
Mild was the wind, calm seem'd the sea to be.
Spenser.

At the helm
A seeming mermaid steers; the silken *tackles*
Swell with the touches of those flower-soft hands
That yarely frame the office.
Shakespear, Antony and Cleopatra, ii. 2.

With all her bravery on, and *tackle* trim,
Sails fill'd, and streamers waving,
Courted by all the winds that hold them play.

Tácksman. *s.* Tenant; lessee.

No chief . . . was willing to set the example of submission. Glengarry blustered, and pretended to fortify his house. 'I will not,' said Lochiel, 'break the ice. That is a point of honour with me. But my *tacksmen* and people may use their freedom.' His *tacksmen* and people understood him, and repaired by hundreds to the Sheriff to take the oaths. The Macdonalds of Sleat, Clanronald, Keppoch, and even Glengarry, imitated the Camerons; and the chiefs, after trying to outstay each other as long as they durst, imitated their vassals.—*Macaulay, History of England*, ch. xviii.

Tact. *s.* [Fr.; Lat. *tactus.*] Touch; sense of feeling: (an old word, long disused; but of late revived in the secondary sense of delicacy of touch, as applied, figuratively, to the feelings, sentiments, or opinions of the persons dealt with).

Lady Marney had great knowledge of society, and some acquaintance with human nature, which she fancied she had fathomed to its centre; she piqued herself upon her *tact*, and indeed she was very quick, but she was so energetic that her art did not always conceal itself.—*B. Disraeli, Sybil*, b. i. ch. v.

The Countess [afterwards Duchess of Marlborough] boasted that she had selected the name of Freeman because it was peculiarly suited to the frankness and boldness of her character; and, to do her justice, it was not by the ordinary arts of courtiers that she had established and long maintained her despotic empire over the feeblest of minds. She had little of that *tact* which is the characteristic talent of her sex: she was far too violent to flatter or to dissemble; but, by a rare chance, she had fallen in with a nature on which dictation and contradiction acted as philtres.—*Macaulay, History of England*, ch. xv.

Then we have descriptions of things which should not be described; a genuine want of *tact*, nay, often a hollowness, and want of sense.—*Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Tactician. *s.* One skilled in tactics: (added by Todd and noted, without an example, as 'a modern word').

It is not improbable that the circumstance which prevented William from attaining any eminent dexterity in strategy may have been favourable to the general vigour of his intellect. If his battles were not those of a great *tactician*, they entitled him to be called a great man. No disaster could for one moment deprive him of his firmness or of the entire possession of all his faculties.—*Macaulay, History of England*, ch. vii.

In war he showed some great moral and intellectual qualities: but, as a *tactician*, he did not rank high; and of his many campaigns only two were decidedly successful.—*Ibid.* ch. xvii.

Táctics. *s.* [see Chromatics.—Gr. τακτικὸς = appertaining to arrangement, order.] Art of ranging men in the field of battle.

When Tully had read the *tacticks*, he was thinking on the bar, which was his field of battle.—*Dryden.*

Táctile. *adj.* [Fr.; Lat. *tactilis.*] Susceptible of touch.

At this proud yielding word
She on the scene her *tactile* sweets presented.
Beaumont, Psyche.

We have iron, sounds, light, figuration, *tactile* qualities; some of a more active, some of a more passive nature.—*Sir M. Hale.*

If we imagine a human being without sight, hearing, taste, smell, or the sense of temperature, and having no channels through which to receive impressions of the outer world, save the *tactile* and muscular senses; then the only attributes of body cognizable by him, will be the statico-dynamical and the statical.... All *tactile* resistances are unconditionally known as coexistent with some extension. —*Herbert Spencer, Principles of Psychology*, § 53.

Táction. *s.* [Fr.; Lat. *tactio, -onis.*] Act of touching.

They neither can speak, or attend to the discourses of others, without being roused by some external *taction.*—*Lord Chesterfield.*

Táctual. *adj.* Tactile.

Whether visual or *tactual*, every perception of the space-attributes of body is decomposable into perceptions of relative position. — *Herbert Spencer, Principles of Psychology*, § 62.

This accepted doctrine I hold to be a natural illusion: to trace it backwards, I hold that our external world, as the extended and resisting object, is given us by intuition and sensation; and that in such intuitional representations what we know as visual sensations play the foremost part; that it is mainly through these, and to seeing men almost wholly through sight, that the *tactual* and muscular sensations, and in general the locomotive energy, become significant of a world of three dimensions.—*Ingleby, Introduction to Metaphysic.*

Tádpole. *s.* [*pole* = head; the origin of the first syllable *tad-* uncertain.] Young frog.

I'll broach the *tadpole* on my rapier's point.

Not to mention the changeable *taffety*, whose colours the philosophers call not real, but apparent. —*Boyle, Experiments and Considerations touching Colours.*

Used *adjectivally.*

Never will I trust to speeches penn'd
Taffata phrases, silken terms precise,
Three piled hyperboles.
Shakespear, Love's Labour's lost, v. 2.

Táffrail. *s.* Upper part of the stern of a ship.

A ball of blue flame pitched upon the knight heads, and then came bounding and dancing aft to the *taffrail.*—*Marryatt, Snarleyyow*, vol. i. ch. v.

The brig came close by the stern of the 'Patagonian.' All her sails shook and trembled as the huge hull took the wind out of them. Singleton lent over the *taffrail.* The stranger was standing on a carronade-slide.—*Hannay, Singleton Fontenoy*, ch. vii.

Tag. *s.*

1. Point of metal put to the end of a string.

A poor man finding the *tag* of a point, and putting it into his pocket, one asked him, What he would do with it? He answered, What I find all the year, be it never so little, I lay it up at home till the year's end, and then, with all together, I every new year's day add a dish to my cupboard.—*Ward, Theological Treatises*, p. 36: 1673.

It was the fashion, in those days, to wear much ribbon; which some adorned with *tags* of metal at the end.—*Richardson, Life of Milton*, p. cxx.

Tag. *v. a.*

1. Fit anything with an end, or point of metal: (as, to *tag* a lace).

There was hardly a thread of the original coat to be seen, but an infinite quantity of lace and ribands, and fringe, and embroidery, and points; I mean only those *tagged* with silver; for the rest fell off.—*Swift, Tale of a Tub*, § 6.

2. Fit one thing with another, appended. *Contemptuous.*

Well knowing nothing's by good breeding lost,

Oft have I seen a hot o'erweening cur
Run back and bite, because he was withheld,
Who, being suffer'd with the bear's fell paw,

2. Luminous train attached to the nucleus or body of a comet.

From the head [of the comet], and in a direction opposite to that in which the sun is situated from the comet, appear to diverge two streams of light, which grow broader and more diffused at a distance from the head, and which most commonly close in and unite at a little distance behind it, but sometimes continue distinct for a great part of their course; producing an effect like that of the trains left by some bright meteors, or like the diverging fire of a skyrocket (only without sparks or perceptible motion). This is the *tail.* This magnificent appendage attains occasionally an immense apparent length. Aristotle relates of the *tail* of the comet of 371 B.C., that it occupied a third of the hemisphere, or 60°; that of A.D. 1618 is stated to have been attended by a train of no less than 104° in length. The comet of 1680, the most celebrated of modern times, and on many accounts the most remarkable of all, with a head not exceeding in brightness a star of the second magnitude, covered with its *tail* an extent of more than 70° of the heavens, or, as some accounts state, 90°; that of the comet of 1769 extended 97°, and that of the greatest comet (1843) was estimated at about 65°, when longest.... The *tail* is, however, by no means an invariable appendage of comets—*Sir J. Herschel, Outlines of Astronomy*, § 556.

Taille. *s.* In *Law.* See extract.

Taille, the fee which is opposite to fee-simple, because it is so minced or pared, that it is not in his free power to be disposed of who owns it; but is, by the first giver, cut or divided from all other, and tied to the issue of the donee. This limitation, or *taille*, is either general or special. *Taille* general is that whereby lands or tenements are limited to a man, and to the heirs of his body begotten; and the reason of this term is, because how many soever women the tenant, holding by this title, shall take to his wives, one after another, in lawful matrimony, his issue by them all have a possibility to inherit one after the other. *Taille* special is that whereby lands or tenements be limited unto a man and his wife, and the heirs of their two bodies begotten.—*Cowell.*

Taílless. *adj.* [the *l* double in sound as well as in spelling.] Wanting, destitute of, a tail.

Tánist. *s.* [Gaelic, *tánaise, tánaiste*.] Chief (elected) of an Irish sept or clan.

Presently after the death of any of their captains, they assemble themselves to chuse another in his stead, and nominate commonly the next brother, and then next to him do they chuse next of the blood to be *tanist*, who shall next succeed him in the said captainry.—*Spenser, View of the State of Ireland.*

Any one of the reigning family might succeed the chief. The heir apparent was nominated by election among the tribe in the chief's lifetime, and called *tanist*. Among the strange principles of tanistry was one that no man could bind his successor.—*C. H. Pearson, The Early and Middle Ages of England*, ch. xxx.

Tánistry. *s.* [Gaelic, *tanaisteachd*.] System of elective chieftainship.

The Irish hold their lands by *tanistry*, which is no more than a personal estate for his life-time that is tanist, by reason he is admitted thereunto by election.—*Spenser, View of the State of Ireland.*

If the Irish be not permitted to purchase estates of freeholds, which might descend to their children, must they not continue their custom of *tanistry?* which makes all their possessions uncertain.—*Sir J. Davies, Discourse on the State of Ireland.*

By the Irish custom of *tanistry*, the chieftains of every country, and the chief of every sept, had no longer estate than for life in their chieferies; and when their chieftains were dead, their sons, or next heirs, did not succeed them, but their tanists, who were elective, and purchased their elections by strong hand.—*Ibid.*

Tank. *s.* [Fr. and Portuguese, *tanque*; ? from Hindustani.] Large cistern or basin.

I saw a *tank* or magazine of water, a very stately work indeed.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 43.

Handle your pruning knife with dexterity: go tightly to your business: you have cost me much, and must earn it: here's plentiful provision, rascal; salading in the garden, and water in the *tank*; and in holy days, the licking of a platter of rice when you deserve it.—*Dryden, Don Sebastian.*

Baillie's detachment was destroyed. Munro was forced to abandon his baggage, to fling his guns into the *tanks*, and to save himself by a retreat which might be called a flight.—*Macaulay, Critical and Historical Essays, Warren Hastings.*

The *tank* consisted of a rectangular zinc framing, twenty inches long by thirteen broad, and twenty-one in depth, having slate cemented into it at the bottom and sides, and being glazed at the back and front. . . . The bottom of the *tank* was covered, for about two inches, with a mixture of sandy loam and gravel, into which several plants of the Vallisneria spiralis, the vegetable member of the arrangement, were inserted. . . . The *tank* was loosely covered with a plate of glass, so as to allow of a free admission of the external air, and at the same time keep out a great deal of the soot and dust of the London atmosphere and impede the too rapid evaporation of the water. As the Trichomanes were stated to delight in shade, a thin muslin blind was placed over the covering glass.—*Warington, On Alteration of Carbonate-of-Lime, Proceedings of the Royal Society*, December 5, 1867.

The shrinking slaves of winter.
Shakespear, Cymbeline, iv. 4.

Tánmill. *s.* Mill for breaking up bark for tanning.

The first machines employed to squeeze the canes, were mills similar to those which serve to crush apples in some cider districts or somewhat like *tan-mills*.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Tánner. *s.* One who tans; one whose trade is to tan leather.

Tanners use that lime which is newly drawn out of the kiln, and not slacked with water or air.—*Moxon, Mechanical Exercises.*

The older *tanners*, who prided themselves on producing a substantial article, were so much impressed with the advantages of slowly impregnating skin with astringent matter, that they employ no concentrated infusion (ooze) in their pots, but stratified the skins with abundance of ground bark, and covered them with soft water, knowing that its active principles are very soluble, and that, by being gradually extracted, they would penetrate uniformly the whole of the animal fibres, instead of acting chiefly upon the surface and making brittle leather, as the strong infusions never fail to do. In fact, 100 pounds of skin, quickly tanned in a strong infusion of bark, produce 135 of leather; while 100 pounds, slowly tanned in a weak infusion, produce only 117½. This additional 19½ pounds weight in the former case serve merely to swell the *tanner's* bill, while they deteriorate his leather, and cause it to contain much less of the textile animal solid. Leather thus highly charged with tannin is, moreover, so spongy as to allow moisture to pass readily through its pores, to the great discomfort and danger of persons who wear shoes made of it. That the saving of time, and the increase of product, are temptations strong enough to induce many modern *tanners* to steep their skins in a succession of strong infusions of bark, is sufficiently intelligible: but that any shoemaker should be so ignorant or so foolish as to proclaim that his leather is made by a process so injurious to its quality, is unaccountably stupid.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

(Ord MS.)

Tapióca. *s.* [? Carib or Brazilian.] Amylaceous, starchy product of the root of the Jatropa Manihot (Manihot utilissima).

It is not a little remarkable that here, as in so many other cases, we should find in a very dangerous natural order such an abundant secretion of starch as renders certain species useful for food when the acrid matter is removed. This is most especially the case with the mandive plant, Manihot utilissima.... Of this plant, the large root, weighing as much as thirty pounds, is full of venomous juice, which, if taken internally, produces death. The roots are rasped, the pulp well bruised, and then thoroughly washed, after which the mash is placed on iron plates to be heated. In this way the venom is washed out or driven off, and the residue becomes cassava. The powder which floats off in the water is a very pure starch, which, when it settles down, becomes *tapioca.—Lindley, Vegetable Kingdom.*

Tápir. *s.* Pachydermatous animal (i.e. animal belonging to the same order as the elephant, &c.) of the genus Tapirus.

To these three genera should succeed that of the *tapirs*, in which the twenty-seven cheek-teeth present before the effect of trituration two transverse rectilinear hills; in front there are in each jaw, six incisors and two canines, separated from the cheek-teeth by a void space. The nose is in the form of a little fleshy trunk; the anterior feet have four toes; the posterior three.—*Translation of Cuvier's Règne Animal.*

The Palæotherium is also a lost... genus, with the same cheek-teeth as the two last, six incisors, and two canines in each jaw, like the *tapir*, a short fleshy trunk, for the muscles of which the bones of the nose were shortened, and left under them a strong slope. We have discovered the bones of this genus mixed up with those of the Anoplotherium in the plaster quarries of the environs of Paris, and they exist in many other parts of France.—*Ibid.*

The American *tapir* is the largest quadruped in South America, and is extensively distributed over that continent, extending over almost every part of it east of the Andes, but probably most abundant within the tropics. It reaches from five to six feet in length, is powerfully formed, and is covered with a scanty close lying hair, forming a bristly mane upon the neck. The colour is a deep brown.—*Sir W. Jardine*, in *the Naturalist's Library.*

Scott, Castle Dangerous*, ch. xi.

Have they been bit by a swearing *tarantula?* No: but they are men and Frenchmen: they have hope; and, singular to say, they have faith, were it only in the Gospel according to Jean Jacques.—*Carlyle, The French Revolution*, pt. ii. b. i. ch. vi.

Tarantula (so called from Taranto in Sicily) [is] the name of a Fabrician genus of pedipalpous pulmonary Arachnidans, infesting the torrid regions of Asia and America. The group is now divided into the genera Phrynus and Thelyphonus. The term is also applied to a genus of spiders found in some parts of Sicily, whose bite produces a train of symptoms long believed to be curable only by music. From this word is derived the term *tarantella*, the national dance of the Sicilians.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

The supernatant liquor, which is a solution of neutral tartrate of potassa, must be drawn off by a syphon, and decomposed by a solution of chloride of calcium (muriate of lime); 28½ parts of the dry chloride are sufficient to 100 of tartar.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Taste, if it mean anything but a paltry connoisseurship, must mean a general susceptibility to truth and nobleness; a sense to discern, and a heart to love and reverence, all beauty, order, goodness, wheresoever or in whatsoever forms and accompaniments they are to be seen.—*Ibid.*

Distinguish every relish sweet and sour.
Sir J. Davies, Immortality of the Soul.

Tásty. *adj.* Expressed or done so as to show intellectual relish: (added by Todd, and noted as a modern word).
Still, notwithstanding the resources we thus have in our double language, we are in some instances perplexed to form such adjectives as we require; for instance, one to correspond to the substantive 'taste.' If we merely mean the bodily sense, we might probably say the gustatory nerves, though the word is little used. But the task is more difficult when we want an adjective referring to the critical faculty, and not to the physical perception. *Tasty*, as Mr. Coleridge has observed, is a word which milliners only can venture upon; and yet, as right and wrong depend upon moral principles, so beautiful and ugly depend on principles of 'taste,' which it would be very convenient to designate by an adjective. Baumgarten, and since him many German and some English writers, have adopted the term esthetical.—*Philological Museum, On English Adjectives.*

Lilburne, however, who had never lost his self-composure at this strange rudeness, was now quietly talking with their host. 'Your Doctor seems an eccentric man—a little absent—learned, I suppose. Have you been to Como, yet?' Mr. Gawtrey remained by the fire beating the devil's *tattoo* upon the chimney-piece, and ever and anon turning his glance towards Lilburne, who seemed to have forgotten his existence.—*Lord Lytton, Night and Morning.*

One writer ... desperately declares that the laws of motion are mere truisms, or *tautological* judgments. It never seems to have occurred to him, that of all wonders, one of the greatest would be to find men in doubt for centuries as to whether 'the whole is greater than its part,' or whether 'everything that happens contingently has a cause;' yet if the laws of motion are, like these, *tautological* judgments, that marvel has been often enacted by men of the greatest ability specially engaged in the cultivation of science.—*Ingleby, Introduction to Metaphysic.*

That the false and *tawdry* ware, which was in all hands, should reach us before the chaste and truly excellent, which it required some excellence to recognise; that Kotzebue's insanity should have spread faster, by some fifty years, than Lessing's wisdom; that Kant's philosophy should stand in the background as a dreary and abortive dream; and Gall's craniology be held out to us from every booth as a reality: all this lay in the nature of the case.—*Carlyle, Critical and Miscellaneous Essays State of German Literature.*

An impure style of speaking and writing does not recommend itself to fastidious and refined judges, merely because it pleases a popular audience, or a wide circle of readers. A discourse full of *tawdry* ornament, false brilliancy, far-fetched metaphors, and turgid exaggeration, which might obtain the applauses of an uneducated audience, would offend the taste of a more instructed class of hearers.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

All that is not strictly definition, that is, all that is not artificial character, in the descriptions of such classes, is a statement of truths, more or less general, more or less precise, but making up, together, the positive knowledge which constitutes the science. As we have said, the consideration of the properties of plants in order to form a system of classification, has been termed *taxonomy*, or the systematick of botany; all the parts of the descriptions, which, taking the system for granted, convey additional information, are termed the physiography of the science; and the same terms may be applied in the other branches of Natural History.—*Whewell, History of Scientific Ideas*, vol. ii. p. 123: 1858.

Green leaves of *tea* contain a narcotick juice, which exudes by roasting: this is performed with great care before it is exposed to sale.—*Arbuthnot, On the Nature and Choice of Aliments.*

Tea was first imported from Holland by the earls of Arlington and Ossory, in 1666; from their ladies the women of quality learned its use. Its price was then three pounds a pound, and continued the same to 1707. In 1715, we began to use green *tea*; and the practice of drinking it descended to the lower class of the people.—*Johnson, Review of Hanway's Journal.*

Applied to infusions other than those of tea: (as, linseed *tea*).

Why will Delia thus retire?

When you sweep, never stay to pick up *tea-spoons.* —*Id.*

Yet, as Catherine of Braganza was certainly the first *tea-drinking* queen of England, she has had the credit of setting the fashion for the use of that temperate beverage, in an age when ladies, as well as gentlemen, at all times of the day, heated or stupified their brains with ale or wine, for the want of the more refined substitutes of tea, coffee, and chocolate.—*Agnes Strickland, Lives of the Queens of England, Catherine of Braganza.*

It is difficult, again, to discriminate between *teachableness*, humility, and reverence for high authorities, and a tame and passive submission of the understanding.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.

Teache. *s.* [?] See extract.

As the liquor grows hot in the clarifier, a scum is thrown up, consisting of the coagulated feculencies of the cane juice. The fire is now gradually urged till the temperature approaches the boiling heat—to which, however, it must not be suffered to rise. It is known to be sufficiently heated, when the scum rises in blisters, which break into white froth; an appearance observable in about forty minutes after kindling the fire. The damper being shut down, the fire dies out; and after an hour's repose the clarified liquor is ready to be drawn off into the last and largest in the series of evaporating pans. In the British colonies, these are merely numbered 1, 2, 3, 4, 5, beginning at the smallest, which hangs right over the fire, and is called the *teache*; because in it the trial of the syrup by touch is made.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Teak [compared with oak] . . . is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability, it demands less care and preparation; for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate.—*Crawfurd, Eastern Archipelago*, vol. i. p. 45.

Teal. *s.* [?] Small species of duck; Anas crecca; half-bird.

Some serve for food to us, and some but to feed themselves; amongst the first sort we reckon the dip-chick, coots, *teal*, wigeon.—*Carew, Survey of Cornwall.*

The *teal* bear confinement well, and at the gardens of the Zoological Society, though restricted to a very small pond with a margin of thick and high grass, with some low shrubs, have bred regularly for five seasons in succession. The eggs are white tinged with buff, measuring one inch nine lines in length by one inch four lines in breadth. The food of the *teal* consists of seeds, grasses, water-plants, and insects, in their various states. In confinement they require grain. Some *teal* breed about the lakes of Wales and a few in Romney Marsh.—*Yarrell, History of British Birds.*

Tear. *s.* Rent; chiefly in combination with Wear.
Mr. Hallam has formed, we think, a most correct estimate of the character and administration of Clarendon. But he scarcely makes a sufficient allowance for the *wear* and *tear* which honesty almost necessarily sustains in the friction of political life, and which, in times so rough as those through which Clarendon passed, must be very considerable.—*Macaulay. Critical and Historical Essays, Hallam's Constitutional History.*

Teárcat. *s.* and *adj.* Ranting.

Used *adjectivally*.

When unkind earth death and despair doth give!
R. Greene.

Téchnical. *adj.* [Gr. τέχνη = art.] Relating to the (useful) arts.
In *technical* words, or terms of art, they refrain not from calling the same substance sometimes the sulphur, and sometimes the mercury of a body.—*Locke.*
Of the terms of art I have received such as could be found either in books of science or *technical* dictionaries; and have often inserted, from philosophical writers, words which are supported perhaps only by a single authority, and which being not admitted into general use, stand yet as candidates or probationers, and must depend for their adoption on the suffrage of futurity.—*Johnson, Preface to Dictionary.*
The knights and burgesses thus chosen, as well as the clergy within the province of Canterbury, met at Northampton; those within the province of York, at that city. And neither assembly was opened by the king. This anomalous convention was nevertheless one means of establishing the representative system, and, to an inquirer free from *technical* prejudice, is little less important than a regul r parliament.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.
It is hardly necessary to give any warning, generally, against the unnecessary introduction of *technical* language of any king, when the meaning can be adequately, or even tolerably, expressed in common, i.e. unscientific words. The terms and phrases of art have an air of pedantic affectation, for which they do not compensate, by even the smallest appearance of increased energy.—*Archbishop Whately, Elements of Rhetoric*, pt. iii. ch. ii. § 6.

Technicálity. *s.* Term applied to words or arguments derived from the limited and narrow character of technical language, as used in broad and comprehensive subjects.
Into such follies the schoolmen appear to have launched, partly because there was less danger of running against a heresy in a matter where the church had defined so little; partly from their presumption, which disdained all inquiries into the human mind, as merely a part of physics; and in no small degree through a spirit of mystical fanaticism, derived from the oriental philosophy and the later Platonists, which blended itself with the cold-blooded *technicalities* of the Aristotelian school.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ix.
Men who had the irresistible calling to be artists became Franciscans or Dominicans, not because mendicancy was favourable to art, but because it awoke, and cherished, and strengthened those emotions which were to express themselves in art. Religion drove them into the cloister; the cloister and the church offered them its walls; they drew from all quarters the traditions, the *technicalities* of art.—*Milman, History of Latin Christianity*, b. xiv. ch. x.

Téchnically. *adv.* In a technical manner.

Since brevity's the soul of wit,
And *tediousness* the limbs and outward flourishes,
I will be brief. *Shakespear, Hamlet*, ii. 2.

4. Uneasiness; tiresomeness; quality of wearying.

In those very actions whereby we are especially perfected in this life we are not able to persist; forced we are with very weariness, and that often, to interrupt them; which *tediousness* cannot fall into those operations that are in the state of bliss when our union with God is complete.—*Hooker, Ecclesiastical Polity.*

More than kisses, letters mingle souls,
For thus friends absent speak: this ease controuls
The *tediousness* of my life. *Donne.*

Tédium. *s.* [Lat.] Weariness; wearisomeness: (not entered in the previous editions).

In faded naval uniform, Paul Jones lingers visible here; like a wineskin from which the wine is all drawn. Like the ghost of himself! Near this same chair were her writing-table, with vellum-covered account-books on it, the cabinet in which she kept her neatly-arranged drugs, her basket for her embroidery, a folio volume of architectural engravings, from which she took her embroidery patterns, a number of the 'North Loamshire Herald,' and the cushion for her fat Blenheim, which was too old and sleepy to notice its mistress's restlessness: for, just now, Mrs. Transome could not abridge the sunny *tedium* of the day by the feeble interest of her usual indoor occupations.—*George Eliot, Felix Holt the Radical*, ch. i.

As the *first element* in a *compound.*

To seize a character, even that of one man, in its life and secret mechanism, requires a philosopher; to delineate it with truth and impressiveness, is a work for a poet. How shall one or two sleek clerical tutors, with here and there a *tedium-stricken* 'squire, or speculative half-pay captain, give us views on such a subject?—*Carlyle, Critical and Miscellaneous Essays.*

Used more than once by this writer.

Teens. *s.* [*ten*.] Years reckoned by the termination *-teen*; as, *thirteen, fourteen*, i.e. those between twelve and twenty: often applied to the age of young people; 'Miss in her *Teens*,' is the title of a once popular comedy.)

Our author would excuse these youthful scenes,
Begotten at his entrance, in his *teens*;

Did you say a cup of tea, Mr. Morley? Water, only water; well, that's strange. Boy, alive there! do you hear me call? Water wanted, glass of water for the Secretary of the Mowbray Temperance and *Teetotal*. Sing it out. I like titled company.—*B. Disraeli, Sybil*, b. ii. ch. x.

Teetótalism. *s.* [derivation uncertain; sometimes derived from *tea* as a beverage to be contrasted with wine and spirits; sometimes said to have originated in the stammering of some advocate of *t-t-total* abstinence.] Extreme form of Temperance, q.v.

Teetótaller. *s.* One who practices or maintains the doctrine of teetotalism.

Télegram. *s.* [Gr. γράμμα, γράμματος = writing.] Signal transmitted by telegraph: (a word of recent origin, which, though etymologically, it applies to telegraphs of any kind, is chiefly limited to, and seems to have been coined for, the communications made by means of the *electric* telegraph).

Télegraph. *s.* [Gr. τῆλε = far, afar off + γράφω = I write; γραφή = writing.]

Télegraph. *v. a.* Communicate by means of a telegraph.

A little before sunset, however, Blackwood, in the Euryalus, *telegraphed*, that they appeared determined to go to the westward.—*Southey, Life of Nelson*, p. 245.

Telégraphy. *s.* System of telegraphic communication.

Conspicuous alike in the early history and in the latest developement of this magnificent invention, Professor Wheatstone has recently constructed instruments of the most ingenious construction, which are not only capable of working with electric currents produced by a mere pocket magnet through sixty miles of wire, but which also print off the messages upon a strip of tinfoil in plain Roman characters. These instruments are especially adapted and now extensively used for private *telegraphy*.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Teleológical. *adj.* Relating to, connected with, final causes.

A final purpose is no doubt, also, subserved in most of the separate centres of ossification which relate homologically to permanently distinct bones in the general vertebrate series; it has long been recognised in relation to facilitating birth in the human fœtus; but some facts will occur to the human osteogenist, of which no *teleological* explanation can be given.... Here, then, we have the homological, without a *teleological* explanation of the separate centre for the coracoid process in the ossification of the human bladebone.—*Owen, Lectures on Comparative Anatomy*, lect. ii.

We may, therefore, without any *teleogical* implication, consider the fitness of such organizations.—*Herbert Spencer, Inductions of Biology*, § 79.

Teleológically. *adv.* In a teleologic, or teleological, manner.

But, besides these, the above discussed deeper and more essential differences of the bones require that they should be divided into simple, as being developed from a single centre, and compound, as developed from separate centres; and the compound bones, in the human subject, for example, may be subdivided into the *teleologically* compound, as the ossa cylindrica, which are originally developed from separate centres in relation to a spinal final purpose; and the homologically compound, as most of the ossa lata (occiput, scapula), and many ossa mixta (vertebræ, sacrum), which are developed from separate centres, representing permanently distinct simple bones in other vertebrata. The *teleologically* compound bones have their relations limited to the particular exigencies of particular classes, but the homologically compound bones have relations extending over the whole vertebrate series.—*Owen, Lectures on Comparative Anatomy*, lect. ii.

Homologically they are the last pair of lumbar hæmapophyses advanced, as in many reptiles, from the sclerous to the osseous states: *teleologically* they belong to the category of the trochlear ossicles, commonly called sesamoid. — *Id., Anatomy of Vertebrates.*

Teleólogist. *s.* Advocate, supporter, of the doctrine of final causes, or teleology.

The explanation of the *teleologist* is untrue, it is often an obverse to the truth; for though, on the hypothesis of evolution, it is clear that things are not arranged thus or thus for the securing of special ends, it is also clear, that arrangements which do secure these special ends tend continually to establish themselves—are established by their fulfilment of these ends. — *Herbert Spencer, Inductions of Biology*, § 79.

Teleólogy. *s.* [Gr. τέλος, τέλεος = end + λόγος = word, principle, method.] Doctrine of final causes, i.e. of causes which are the effect of an intention or aim, and, as such, indicative of design.

But I would remark, that history, viewed as a palætiological science, will be found to contain a peculiar element, a distinct *teleology*, or consideration of final causes, which its sister sciences have not. I do not speak here of the remote *teleology* which regards the All-ordaining, Overruling Intelligence, of what Paley terms the design of THE Designer, but of a proximate *teleology* of the machinery in change.—*Sir E. S. Creasy, Spirit of Historical Study.*

Without attempting in this place to justify my opinion, or even to define the kind of justification which it admits of, I merely declare my conviction, that the general principle to which all rules of practice ought to conform, and the test by which they should be tried, is that of conduciveness to the happiness of mankind, or rather, of all sentient beings: in other words, that the promotion of happiness is the ultimate principle of *teleology*. — *J. S. Mill, System of Logic*, pt. vi. b. ii. § 7.

Télescope. *s.* [Gr. τῆλε = far off + σκοπέω = I see, view, look, spy. The word is not old in the language; in 1655, it is placed in Bagwell's Mystery of Astronomy among words requiring an explanation.] Optical apparatus for the purpose of magnifying distant objects; as such, to be contrasted with the Microscope.

We have no doubt that this invaluable instrument was invented by Roger Bacon or Baptista Porta, in the form of an experiment; though it had not, perhaps, in their hands assumed the maturity of an instrument made for sale, and applied to useful purposes, both terrestrial and celestial. If a *telescope* is an instrument by means of which things at a distance can be seen better than by the naked eye, then Baptista Porta's concave lens was a real *telescope*; but if we give the name to a tube having a convex object-glass at one end, and a convex or concave lens at the other, placed at the distance of the sum of difference of their focal lengths, then we have no distinct evidence that such an instrument was used before the beginning of the seventeenth century.—*Sir D. Brewster*, in *Encyclopædia Britannica, Optics.*

Mr. Molyneux discoursed of *telescopic* sights.—*History of the Royal Society*, vol. iv. p. 272.

Telesmátical. *adj.* Belonging, relating to, constituted by, telesms. (This and the following form are catachrestic; *telesm* being taken for a Greek word, as if it were τελεσμα, τελεσματος.)

They had a *telesmatical* way of preparation, answerable to the beginnings and mediocrity of the art.—*Gregory, Notes on Scripture*, p. 41.

There was brought into Aleppo a little copper vessel, out of a strong imagination that it was endued with a *telesmatical* virtue to draw thereunto a sort of birds which feed on locusts.—*Sir P. Ricaut, Present State of the Greek and Armenian Churches*, p. 376.

'The snacks,' replied the man. 'What will you give up.' 'Give up! How do you mean?' 'What is my share to be?' 'Share! You can't share; you're not a king's officer.' The fervid and irresistible enthusiasm which distinguished the youthful period of Mohammedism might sufficiently account for this conquest; even if we could not assign additional causes,—the factions which divided the Goths, the resentment of disappointed pretenders to the throne, the provocations, as has been generally believed, of Count Julian, and the *temerity* that risked the fate of an empire on the chances of a single battle.—*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. iv.

His gloomy *temperament* may have needed this excitement.—*Milman, History of Latin Christianity*, b. x: ch. v.

It is by no means intended to imply that there may not be different kinds, or logical species, of man. The various races and *temperaments*, the two sexes, and even the various ages, may be differences of kind, within our meaning of the term. I do not say that they are so.—*J. S. Mill, System of Logic* pt. i. ch. vii. § 4.

Auricular confession, as commonly called, or the private and special confession of sins to a priest for the purpose of obtaining his absolution, an imperative duty in the church of Rome, and preserved as such in the statute of the six articles, and in the religious codes published by Henry VIII., was left to each man's discretion in the new order; a judicious *temperament*, which the reformers would have done well to adopt in some other points. And thus, while it has never been condemned in our church, it went without dispute into complete neglect.—*Hallam, Constitutional History of England*, vol. i. ch. ii.

According to a statement made at the meeting of the 'World's *Temperance* Convention' at New York in 1853, the first National Organisation against Alcohol, i.e. the American Society for the Promotion of *Temperance*, was established in 1826. Societies of persons pledged by mutual agreement to abstain from intoxicating drink were formed about the same time both in Britain and America, and differences of opinion as to the strictness of the rules to be followed engendered the different designations of *temperance* and total abstinence or *teetotalism*.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Heat affects the touch, but, under ordinary circumstances, does not affect the eye. The capital difference, however, between them is, that heat, unlike light, possesses the property of *temperature*; and this property is so characteristic, that, until our understandings are invigorated by science, we cannot conceive heat separated from *temperature*, but are compelled to confuse one with the other.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

When we express our immediate experiences of a body by saying that it is hard, what are the experiences implied? First, a sensation of pressure of considerable intensity is implied; and if, as in most cases, this sensation of pressure is given to a finger voluntarily thrust against the object, then there is simultaneously felt a correspondingly strong sensation of muscular *tension*. But this is not all: for feelings of pressure and muscular tension may be given by bodies which we call soft, provided the compressing finger follows the surface as fast as it gives way. In what then consists the difference between the perceptions? In this; that whereas when a soft body is pressed with increasing force, the synchronous sensations of increasing pressure and increasing muscular *tension* are accompanied by sensations of muscular movement; when a hard body is pressed with increasing force, these sensations of increasing pressure and *tension* are not accompanied by sensations of muscular movement. Considered by itself then, the perception of softness may be defined as the establishment in consciousness of a relation of simultaneity between three series of sensations—a series of increasing sensations of pressure; a series of increasing sensations of *tension*; and a series of sensations of motion.—*Herbert Spencer, Principles of Psychology*, § 55.

If I attempt to read a book on an argumentative and philosophical subject, I am obliged to put it aside in about ten or fifteen minutes. This was not the case before my mental indisposition, for I then indulged freely in most abstruse reading, rarely looking at the light literature of the day. My head aches, and the mind gets confused, if I try to follow a complex train of reasoning, and I, therefore, now do not read any work that is likely to produce *tension* of thought.—*Dr. Forbes Winslow, On Certain Obscure Diseases of the Brain and Mind*, ch. iv.

Dryden, State of Innocence, i. 2.
Whether . . . the law of feudal *tenures* can be said to have existed in England before the Conquest must be left to every reader's determination. Perhaps any attempt to decide it positively would end in a verbal dispute. In tracing the history of every political institution, three things are to be considered, the principle, the form, and the name. The last will probably not be found in any genuine Anglo-Saxon record. Of the form, or the peculiar ceremonies and incidents of a regular fief, there is some, though not much appearance. But those who reflect upon the dependence in which free and even noble tenants held their estates of other subjects, and upon the privileges of territorial jurisdiction, will, I think, perceive much of the intrinsic character of the feudal relation, though in a less mature and systematic shape than it assumed after the Norman conquest.—*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. viii.

Now, it is known that the whole vertebrated animals are moulded on one general plan; a continuous line can be traced of gradually increasing perfection of development from the lower to the higher animals. This is also a fundamental law of physiology, or *teratology*, that in the numerous deviations of structure found in various monstrosities there is a retrogression toward the development of a lower species.—*Dr. Sankey, Lectures on Mental Diseases*, lect. vi.

Word for word, this is a congener of *terebinthinate*, in its medical sense; also, the origin of the word *turpentine*. As a botanical term it has no connexion with the firs, the class most especially connected with turpentine. What plant is meant in the extract is uncertain; probably one of the mastics. As a generic name *terebinthus* is nearly synonymous with pistacia (Pistacia vera being the pistacia nut); as the name of an order, it sometimes translates Anacardiaceæ, the groupe to which, besides the Pistacia, the cashew-nut, the hog-plums, the mango, the mastic-tree, the sumach, and other important plants belong. Whoever worships the image of anything, cannot possibly worship that image *terminatively*, for the very being of an image is relative.—*Jeremy Taylor, Dissuasive from Popery*, ch. ii. § 12.

Terminológically. *adv.* In a terminological manner; in the way of terminology.

He whose horizon is bounded by an historical knowledge of the human machine, and who can only distinguish *terminologically* and locally the coarser wheels of this piece of intellectual clockwork, may be, perhaps, idolized by the mob; but he will never raise the Hippocratic art above the narrow sphere of a mere bread-earning craft.—*Dr. Forbes Winslow, On Certain Obscure Diseases of the Brain and Mind.*

Terminólogy. *s.* [Lat. *terminus* = term + Gr. λόγος = word, doctrine, principle; a hybrid coinage; one, however, which, being separated in import from *nomenclature*, is considered useful, and being, as may be seen in the extracts, used by scholars like Hallam and Sir G. C. Lewis, is likely to take root in our language.—*Terminology, Tidology*, and *Sociology*, it is hoped, are the three worst barbarisms that are destined to do so.] Doctrine, or system, of terms.

Brucker has made a distinction between the scholastic and the genuine Aristotelians; the former being chiefly conversant with the doctors of the middle ages, adopting their *terminology*, their distinctions, their dogmas, and relying with implicit deference on Scotus or Aquinas. . . . While the latter throwing off the yoke of the schoolmen, prided themselves on an equally complete submission to Aristotle himself.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. iii. § 2.

In the modern period of science, besides the three processes anciently employed in the formation of technical terms, there have been introduced systematic nomenclature, systematic *terminology*, and the systematic modification of terms to express theoretical relations.—*Whewell, Novum Organon Renovatum.*

Such . . . are the inquiries which form the subjects of the most important of Plato's Dialogues; as, 'What is rhetoric?' the topic of the Gorgias, or 'What is justice?' that of the Republic. Such also, is the question scornfully asked by Pilate, 'What is truth?' and the fundamental question with speculative moralists in all ages, 'What is virtue?' It would be a mistake to represent these difficult and

noble inquiries as having nothing in view beyond ascertaining the conventional meaning of a name. They are inquiries not so much to determine what is, as what should be, the meaning of a name; which, like other practical questions of *terminology*, requires for its solution that we should enter, and sometimes enter very deeply, into the properties not merely of names but of the things named.—*J. S. Mill, System of Logic*, pt. i. b. ix. § 7.

For purposes of scientific observation, a training of the senses is likewise necessary. A scientific observer must be not only familiar with the *terminology* of his science, and be able to apply its technical terms readily to the proper objects, but he ought likewise to have acquired that delicacy, rapidity, and correctness of discernment which the habit of observation, combined with knowledge, can alone confer.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii.

It has been shown in another place, how the right of *territorial* jurisdiction was generally, and at last inseparably, connected with feudal tenure. Of this right we meet frequent instances in the laws and records of the Anglo-Saxons, though not in those of an early date. A charter of Edred grants to the monastery of Croyland soc, sac, toll team and infangthef; words which generally went together in the description of these privileges, and signify the right of holding a court to which all freemen of the territory should repair, of deciding pleas therein, as well as of imposing amercements according to law, of taking tolls upon the sale of goods, and of punishing capitally a thief taken in the fact within the limits of the manor.—*Ibid.*, pt. i. ch. viii.

1. In *Geology.* Division of the strata composing the crust of the earth, containing the fossil remains of existing, as well as of extinct, organisms. See, also, Eocene, Miocene, and Pliocene.

Previously to the year 1833, . . . the strata called *tertiary* had been divided by geologists into Lower, Middle, and Upper; the Lower comprising the oldest formations of the environs of Paris and London, with others of like age; the Middle, those of Bordeaux and Touraine; and the Upper, all that lay above or were newer than the last-mentioned group.—*Sir C. Lyell, Geological Evidences of the Antiquity of Man*, ch. i.

Tertiary rocks were originally thought to occupy basins, and to be, to a great extent, of freshwater origin. It is true that the deposits of this newer period are, in Europe, more broken and detached than the secondary rocks; but this is due to the fact that at the time of their deposit large tracts of land were coming into existence in this part of the northern hemisphere. Elsewhere, as in South America, the *tertiary* rocks are continuous deposits, fully equal in all dimensions to the largest secondary or palæozoic rocks of any one period, and a large proportion are marine. *Tertiary* rocks are rich in fossils, and the organic remains yielded by them have naturally a greater resemblance to familiar modern species now living, than that which is seen in those of the secondary and palæozoic rocks. . . . The *tertiary* rocks pass by insensible gradations into those of modern date and recent formation. There is no abrupt change of any kind common to all parts of the world, either in reference to the *tertiaries* or other rocks.—*Ansted*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Test. *s.* [Fr.; Lat. *testis* = witness.—Wedgwood deduces this word from *testa* = shell, pot, i.e. the material of which the chemist's crucible is made. The two may be concurrent derivations; it is, certainly, unsafe to deny or reject all connexion with *testis* = witness.]

Testaceous, with naturalists, is a term given only to such fish whose strong and thick shells are entire, and of a piece; because those which are joined, as the lobsters, are crustaceous: but in medicine all preparations of shells, and substances of the like kind, are thus called.—*Quincy.*

Several shells were found upon the shores, of the crustaceous and *testaceous* kind.—*Woodward, Essay towards a Natural History of the Earth.*

The mineral particles in these shells are plainly to be distinguished from the *testaceous* ones.—*Ibid.*

An extremely small proportion of the fossil shells of this [the Eocene] period could be referred to living species, so that this era seemed to indicate the dawn of the present *testaceous* fauna, no living species of shells having been detected in the antecedent or secondary rocks.—*Sir C. The ecclesiastical tribunals took cognizance of breaches of contract, at least where an oath had been pledged, and of personal trusts. They had not only an exclusive jurisdiction over questions immediately matrimonial, but a concurrent one with the civil magistrate in France, though never in England, over matters incident to the nuptial contract, as claims of marriage portion and of dower. They took the execution of *testaments* into their hands, on account of the legacies to pious uses, which testators were advised to bequeath.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. vii.

Several regulations were however made in the fourteenth century, which took away the ecclesiastical cognizance of adultery, of the execution of *testaments*, and other causes which had been claimed by the clergy.—*Ibid.*, pt. ii. ch vii.

Tétraspore. *s.* [Gr. *σπόρον* = seed.] In *Botany.* See extract.

Tetraspore [is] one of the forms of fructification found in some sea-weeds. It consists of little clusters of spores, in most cases four in number, but very rarely eight. Mr. Berkeley remarks that fruit of this form seem to be not mere modifications of the capsule, but rather of the nature of gemmæ, multiplying the individual without impregnation. It is called *tetrasporic*, and the separate bodies *tetraspores*. They are usually formed by the division (often unequal) of one globose endochrome, three of the four divisions only being in general visible, in which case the fruit is sometimes erroneously called trisporic. When all four are visible at once the division is said to be crucial. In some genera, however, the oblong or elliptic endochrome is divided transversely, when the division is called zonate or annular. The *tetraspores* may be simply immersed in the frond, when they are called sori; or contained in external warts or excrescences, or in proper leaflets, or lastly, in elongated pod-like processes. It is in the rose-spored algæ that *tetraspores* are found.—*Moore*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Thállium. *s.* [A word of recent coinage, the *-um* being the technical and artificial termination in Chemistry, denoting that the word in which it is found is the name of a metal. The first part is from the Greek, θαλλὸς = shoot of a plant, sucker, twig, suggestive of *greenness*, inasmuch as the spectrum of thallium gives a brilliant green line.] See extract.

This metal was discovered by Crookes in 1861, in a deposit obtained from the sulphuric acid manufactory of Tilkerode, in the Harz. The spectrum of this product furnished a singularly brilliant green line, which led him to examine it further, and suggested the above name. It has since been found in some varieties of pyrites and in the residue of the evaporation of certain mineral waters. It is a soft lead-like metal; its specific gravity between 11 and 12; its atomic weight 204; it tarnishes in the air; fuses at about 560°, and at about 600° takes fire and burns with a green light; in ductility, malleability, and tenacity, it much resembles lead. It forms alloys with most of the other metals. It forms two oxides, the most important of which is the protoxide (=Tl O). This oxide is soluble in water, furnishing an alkaline liquor which absorbs carbonic acid; it is yellow when anhydrous, soluble in sulphuric, nitric and hydrochloric acids, and is thrown down from its solutions by sulphide of ammonium in the form of a dark brown sulphide. No precipitate is formed in solution of sulphate or nitrate of *thallium* by the caustic alkalies, but the carbonated alkalies give a precipitate in very concentrated solutions; chlorides, bromides, and iodides, give yellowish precipitates. The salts of *thallium* are very poisonous; they are colourless, when formed with colourless acids, and are easily decomposed by feeble electric currents.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Thállogen. *s.* [Gr. θαλλὸς + γένος = generation.] In *Botany.* Division of the flowerless plants containing the Algæ, Fungi, and Lichens.

It is not easy to settle the limits of the alliances of the *thallogens*. Linnæus and Jussieu had but two divisions, viz. Algæ (including Lichens) and Fungi, and they have been followed by some modern botanists, particularly Fries and Wahlenberg. Others have been satisfied with separating the Lichens from Algæ, which, indeed, was virtually done by most of those who acknowledge but two divisions, and with admitting three equally distinct groups. Some, on the contrary, have sought to multiply the orders, as Decandolle and others, by introducing a tribe called Hypoxyla. . . . It is clear, however, that these groups are of very unequal degrees of importance, and that after all they must be reduced under the three great forms [Algæ, Fungi, Lichens] whose existence is universally recognized.—*Lindley, Vegetable Kingdom.*

Thallogens; seldom herbaceous, or provided with foliaceous appendages; foliaceous appendages, if present, destitute of stomata. Spores rarely producing a prothallus; and, if so, giving rise to a second order of spores, germinating at definite points. Spermatozoids not spiral. . . . There is certainly a distinction of root and stem in many, even of the simplest *thallogens*. The root in Algæ is often a mere holdfast, but in other cases it penetrates into the soil and absorbs nutriment, and the same may be said of some of the simpler fungi. In the higher fungi this opposition is still more evident.—*Berkeley, Introduction to Cryptogamic Botany*, p. 69, 71, and note: 1857.

Thállus. *s.* In *Botany.* See extract.

Those simpler plants which exist without distinction of leaf and stem are also destitute of flowers; they are equally without the breathing-pores so abundantly found in the skin of the more complex species, and they multiply by the spontaneous formation in their interior, or upon their surface, of reproductive spheroids called spores. Among the many names that botanists have given to such plants, that of thallogens has been preferred. A *thallus* is a fusion of root, stem, and leaves, into one general mass: and that is much the nature of these elements of vegetable structure.—*Lindley, Vegetable Kingdom.*

Thames *on fire.* The probable propriety of disconnecting this from the name of the river, and connecting it with *Tummy* may be seen under Fire. *Tammy* itself is from the French, *estamine*; whence, also, Tamine and Stammel.

Sackville Maine was the best of hosts. He agreed in everything everybody said, altering his opinions without the slightest reservation upon the slightest possible contradiction. He was not one of those beings who would emulate a Schönbein or a Friar Bacon, or *act the part of an incendiary towards the Thames* his neighbour—but a good, kind, simple, honest, easy fellow—in love with his wife—well-disposed to all the world—content with himself, content even with his mother-in-law.—*Thackeray, Book of Snobs*, ch. xlii.

'I'll be frank with you,' said Cutbill, emptying the last of the decanter into his glass as he spoke. 'I'll be frank with you. We've got coal; whether it be much or little, there it is; as to quality, as I said before, it isn't Cardiff. It won't *set the Thames on fire*, any more than the noble lord that owns it; but coal it is, and it will burn as coal, and yield gas as coal, and make coke as coal—and who wants more?' —*C. Lever, The Bramleighs of Bishop's Folly*, vol. iii. ch. xii.

Than. *conj.* Particle denoting comparison, and, as such, preceded either by an adjective in the comparative degree, or comparative in sense. For its origin as a case see last extract.

Were we not better to fall once with virtue,
Than draw a wretched and dishonour'd breath?
B. Jonson, Catiline's Conspiracy.

More true delight in that small ground,
Than in possessing all the earth was found.
Daniel.

I love you for nothing more *than* for the just esteem you have for all the sons of Adam.—*Swift.*

The Anglo-Saxon adverbs are *whenne* and *þenne*= when, then. The masculine accusative cases of the relative and demonstrative pronoun are *hwæne* (*hwone*) and *þæne* (*þone*). Notwithstanding the difference, the first form is a variety of the second; so that the adjectives *when* and *then* are pronominal in origin. As to the word *than*, the conjunction of comparison, it is a variety of *then*; the notions of order, sequence, and comparison being allied. 'This is good; then (next in order) that is good,' is an expression sufficiently similar to 'This is better *than* that' to have given rise to it.—*Dr. R. G. Latham, English Language*, § 506.

Than. ? *prep.* If the extracts from Swift and Prior, with the like of them, are to pass on authority as accurate English, this word is a preposition as well as a conjunction.

No conjunction can govern a case. A word that governs a case, be it ever so like a conjunction, is . . . a preposition. *Than*, in respect to its etymology, is neither more nor less than *then*. It is not difficult to see the connection in sense between such sentences as 'I like this better *than* I like that,' and 'I like this—*then* (afterwards or next in order) like that.' *Than* is sometimes treated as a preposition when it govens a case.

Thou art a girl as much brighter *than* her,
As he is a poet sublimer *than* me. (Prior.)
You are a much greater loser *than* me. (Swift.)

It is better, however, to treat it as a conjunction, in which case the noun which follows it depends upon the verb of the antecedent clause. 2. 'I like you better *than* he'='I like you better *than* he likes you.' 2. 'I like you better *than* him'='I like you better *than* I like him.'—*Dr. R. G. Latham, English Language*, § 763.

Thane. *s.* [A.S. *þegn*; connected by some with the German *dienen* = serve: by others with *degen* = sword.] Term in Anglo-Saxon, applied to the members of two classes in the body politic, the lower of which corresponded with the higher gentry rather than with the nobility, the latter more decidedly noble; baron has generally been given as the Anglo-Norman equivalent. The term kept current in Scotland longer than in England.

Thane was the title of those who attended the English Saxon kings in their courts, and who held lands immediately of those kings; and therefore in Domesday they were promiscuously called *Thani* et Servientes Regis, though not long after the Conquest the word was disused; and . . . instead thereof those men were called Barones Regis, who, as to their dignity, were inferior to earls, and took next after bishops, abbots, barons, and knights. There were also Thani minores, and those were likewise called barons. These were lords of manors . . . in their courts, which to this day are called courts-baron.—*Jacob, Law Dictionary.*

There were but two denominations of persons above the class of servitude, *thanes* and ceorls; the owners and the cultivators of land, or rather, perhaps, as a more accurate distinction, the gentry and the inferior people. Among all the northern nations, as is well known, the weregild, or compensation for murder, was the standard measure of the gradations of society. In the Anglo-Saxon laws we find two ranks of freeholders; the first, called King's *Thanes*, whose lives were valued at 1200 shillings: the second of inferior degree, whose composition was half that sum. That of a ceorl was 200 shillings. The nature of this distinction between royal and lesser *thanes* is very obscure; and I shall have something more to say of it presently. However, the *thanes in* general, or Anglo-Saxon gentry, must have been very numerous. A law of Ethelred directs the sheriff to take twelve of the chief *thanes* in every hundred, as his assessors on the bench of justice. And from Domesday Book we may collect that they had formed a pretty large class, at least in some counties, under Edward the Confessor. . . . The word *thane* corresponds in its derivation to vassal; and the latter term is used by Asserius, the contemporary biographer of Alfred, in speaking of the nobles of that prince. In their attendance, too, upon the royal court, and the fidelity which was expected from them, the king's *thanes* seem exactly to have resembled that class of followers, who, under different appellations, were the guards as well as courtiers of the Frank and Lombard sovereigns. But I have remarked that the word *thane* is not applied to the whole body of gentry in the more ancient laws, where the word Eorl is opposed to the Ceorl or roturier, and that of Sithcundman to the royal *thane*. . . . In almost every page [of Domesday Book] we meet with tenants either of the crown, or of other lords, denominated *thanes*, freeholders (liberi homines) or socagers (socmanni).—*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. viii.

The *Thanes* were the lords of the townships that have been described; and their local dignity and power must have been, practically, even more important than their share in the general government of the commonwealth. But while we observe the strong influence of the aristocratical element in the Anglo-Saxon polity and social system, we must always remember that this superior body of the *Thanes* was not an exclusive caste or a strictly hereditary noblesse. It is an aristocracy of the best kind; an aristocracy always open to receive recruits from the ranks below it. Any ceorl who could acquire a certain amount of landed property, might become a *Thane*; and the successful merchant could raise himself to the same rank.—*Sir E. S. Creasy, History of England*, vol. i. ch. vi.

Thane, thayne. 1. (Wyntown.) 2. An officer not superior in rank to a knight, who has been viewed as serving under the superior *thane*. (Stat. Alex. II.)—*Jamieson, Dictionary of the Scottish Language.*

Tharm. *s.* [see Thrum.] Intestines twisted for several uses.

That. *pron.* [Part of what has to be stated concerning this word is anticipated in the notice of It, and part anticipates what would otherwise be repeated under What. The main part, however, is that the final *t* is the same in the three words; and, also, that it is the same as the *d* in the Latin *id*, as in the *is* = he, *ea* = she, and *id* = it, in the Latin grammars. It is also the same as the Latin *d* in *quod*, in *qui*, *quæ*, *quod*. In other words it is no part of the root, but a sign of the neuter gender. This is all that we have in English. But in the Norse and German languages it is common. The indefinite article in Danish is *en* for the masculine or feminine (i.e the common) gender, *ett* for the neuter. In the same language also the difference between the neuter and common gender (masculine *and* feminine) is expressed by the like addition of *t*; the masculine or feminine for *beautiful, fair, fine*, &c., being *skjön*, the neuter being *skjönt*, and so on, throughout the whole range of adjectives. And so on, also, allowing for the difference during the older stages of the language (when the masculine and feminine were different), through all the stages of the Norse tongues—Swedish, Norwegian, Feroic, and Icelandic. In Modern German the sign of the neuter is *s*—masculine *schön*, neuter *schönes*; but that this *s* is fundamentally *t*, is shown by the older forms in *z*, a sign representing *ts*, or something closely akin to it. Meanwhile the common Latin and Greek sign of the neuter, *m* (*bonus, bona, bonum*), is utterly unknown. Meanwhile also, the *t*, as the inflexion for the German tongues, is found only among the pronouns in Latin and Greek. A safe generalization has been founded on this; viz. that whereas originally there were *two* neuter inflexions, one for the adjective and one for the pronoun, the Latin and Greek languages have adopted the adjectival one for *both* the pronoun and the adjective (retaining the other only as a fragment), the German languages have reversed the process, and (omitting the adjectival inflexion altogether) have not only retained the pronominal sign, but extended it to the adjectives.

In English, however, where the adjectives are absolutely indeclinable, the neuter in *t* is limited to the three pronouns already named. And the relations are curious; of the three, *it* is the only one which gives us the three genders, but these are disguised. For *He, she, it*, the Anglo-Saxon was *He, heo, hit*. Of these, *heo* in the current English is lost, and *hit* has dropped its initial *h*.

With the Relative, *who* serves for both the masculine and feminine; *what* being neuter. But *what* is superseded to a great extent by *which*.

In the word before us the Anglo-Saxon grammars give us, masculine *se*, feminine *seo* (*sio*), neuter *þæt*. Of these, *seo* is the English *she*; the grammar, for the third personal pronoun running *he, she, it*, plural *they*; *that* being treated as a demonstrative pronoun rather than as a personal one. It is not difficult to see what this implies. It implies that certain inflections were defective rather than irregular. *Se, seo, þæt*, suggests an original *þe, þeo, þæt*. For this see The.

At present it is enough to repeat the statement that the *-t* in *tha-t* is no part of the original word, but a sign of the neuter gender; that it implies a regular masculine and feminine; but that at present it is defective in this respect, that in Anglo-

Saxon it made good this defect by drawing upon other roots, and that in so doing it was a personal rather than a demonstrative pronoun.]

5. Opposed to *this*, as *the other* to *one*.
This is not fair; nor profitable *that*;
Nor t' other question proper for debate.
Dryden, Translation of Persius, iv. 19.

6. When *this* and *that* relate to foregoing words, *this* is referred like *hic* or *ceci* to the latter, and *that* like *ille* or *cela* to the former.—So stands the notice in the previous editions. It is doubtful, however, whether the rule is founded on a principle broad enough to make it general. The editor believes it to be artificial; founded upon the mere enumeration of certain instances, and contravening, rather than resting upon, any law of thought. That it would be useful, as an *artificial* rule in composition, if it could be enforced, is not denied. What *this* denotes is the nearest, what *that* denotes is the most distant of two objects: and the way to ascertain the ordinary mode of thinking in this matter is to divest the antecedents of any meaning by which the connection of each with its proper pronoun is indicated, and then ask what the mere fact of relative position gives us. Thus, to one who has never heard of the rule before us, but who trusts his common sense only as to what is conveyed by such a pair of propositions as 'A is good, but B is better;' for *this* is sweet, while *that* is both sweet and wholesome.' Which is A, and which is B? It is probable that the first step in such an inquiry is to substitute for *this* and *that* their nearest equivalents, viz. *the one* and *the other*. Surely, it would strike no one to say that *the one* was denoted by the *last*, and that *the other* was denoted by the *first* of the symbols. Rather the contrary; *this* and *that*, *the one* and *the other*, are little more than *first* and *second*. It may be held, however, that notwithstanding this, when we use the combination A, B, *this* and *that*, that it is the last of the first two terms which is nearest to us when we attach to them a third and a fourth (i.e. a second pair). It is difficult to say how others think. The editor can only say that he has no doubts as to how he thinks himself; to him the nearer of the two terms is the one which presented itself as *this*; the more distant one, the one that followed as *that*.
In this scale gold, in t' other fame does lie,
The weight of *that* mounts *this* so high. *Cowley.*
The chief point of syntax connected with the pure demonstrative is one that is suggested by the following well-known quotation:—
'Quocunque aspicias nihil est nisi pontus et aer;
Nubibus hic tumidus, fluctubus ille minax.'
Here hic refers to ... air; whilst ille ... refers to ... sea. On the strength of this example, combined with others, it is laid down as a rule in Latin that *this* refers to the last, and *that* to the first antecedent. What is the rule in English? Suppose we say 'John's is a good sword, and so is Charles's; *this* cut through a thick rope; *that* cut through an iron rod.' In determining to which of the two swords the respective demonstratives refer, the meaning will not help us at all; so that our only recourse is to the rules of grammar; and it is the opinion of the present writer that the rules of grammar will help us just as little. The Latin rule is adopted by scholars, but still it is a Latin rule rather than an English one. It is, probably, a question which no authority can settle; and all that grammar can tell us is, that *this* refers to the name of the idea which is logically the most close at hand, and *that* to the idea which is logically the most distant. What constitutes nearness or distance of ideas—in other words, what determines their sequence—is another question.—*Dr. R. G. Latham, English Language*, § 648: 1862.

Thaúmatrope. *s.* [Gr. θαῦμα, -ατος = wonder + τρέπω = I turn; τρόπος = turning, turn, manner.] See extract.
Thaumatrope [is] the name given by Dr. Paris to an optical toy, the principle of which depends on the persistence of vision. A circle is cut out of a piece of card, to opposite edges of which two silk strings are fixed, by twisting which between the finger and thumb of each hand the disc is turned round with considerable velocity. On one side of the disc is drawn any object, as a chariot; on the other side, the charioteer in the attitude of driving; so that when the card is twirled round, we see the charioteer driving the chariot; or, in consequence of the duration of the impressions of light on the retina, we see at once what is drawn on both sides of the card.—*Sir D. Brewster, On Optics.*
The means by which this illusion is produced has been called the *thaumatrope*, from two Greek words meaning 'wonder' and 'turn.' It is difficult to trace the history of this discovery; but it is certain that it has been the result of a very old, simple, and well-known experiment.... The *thaumatrope* is capable of showing that binocular vision can detect to a degree hardly conceivable the most minute difference in the distances of objects, such as the distance between the planes of the two surfaces of a card, which distance is nothing more than the thickness of the card.—*A. Claudet, On Binocular Vision*, in *Proceedings of the Royal Society*, April 11: 1867.

But in those despotic countries the police is so arbitrary! Cagliostro's *thaumaturgy* must be overhauled by the Empress's physician (Mouncey, a hard Annandale Scot); is found naught . . . the result is, that he must leave Petersburg in a given brief term of hours.—*Carlyle, Critical and Miscellaneous Essays, Count Cagliostro.*

From Hecla view the *thawing* deep;—
Thee, fond nymph! again I woo,
And again thy steps pursue. *Grainger.*

The. *art.* [At present this word is wholly uninflected, being the same for all cases, genders, and numbers. Originally, however, it belonged to the personal pronouns, and was as thoroughly declined as the Latin *hic, hæc, hoc*, or *qui, quæ, quod*. Moreover, the remains of this declension still exist; though with a difference of import, and, as different parts of speech. As for *the* itself, it must be sought for in the Frisian, rather than in the ordinary Anglo-Saxon; for in this latter language the masculine and feminine forms of the nominative singular of the definite article were not *þi*, (or *þe*) *þio*, (*þeo*) but *se, seo*. The same was the case in the Icelandic, or Old Norse, where the forms were M. *sa*; F. *su*; the neuter in both languages being *þæt*. See That. *Se*, or the masculine form, no longer exists as such. The feminine, *seo*, however, is word for word, the modern *she*; its import being slightly changed, just as in Latin *hæc* might supersede *illa*. The neuter nominative, as aforesaid, was *þæt* = that. For the possessive, or genitive, masculine and neuter, the form was *þæs*, the *s* being the ordinary termination for this case. It no longer exists. For the genitive, as also, for the dative feminine, the word was *þære*. Let a substantive denoting place or direction, and also of the feminine gender, be supposed to have combined with it, and to have, subsequently, become obsolete (or, if not this, to have understood from the first), and it is easy to see how the present word *there*, originally the dative feminine of a pronoun, is now an indeclinable adverb. The dative for the masculine and neuter, was *þám*; no longer existent. The accusative for the neuter, according to the very general rule that that gender has its nominative and accusative alike, was *þæt*; the feminine accusative *þá*. The masculine was *þæne*, or *þone*. Substitute for the feminine noun denoting *place*, a *masculine* noun denoting *time*, and the history of the two existing adverbs is the same. Lastly, there was in Anglo-Saxon the form *þy*—a form sometimes called ablative, sometimes instrumental. Its commonest combination, however, was with an adjective or pronoun in the comparative degree; as, *þy má* = the more; *þy læsse* = the less. Out of this has grown the *the* in such combinations as '*the* sooner *the* better,' '*the* more *the* merrier;' combinations like the Latin 'eo majus,' 'eo minus,' &c.; the full import being 'by that much,' 'by so much.']

Thence. *adv.* [A.S. *þennes*; the *-ce* in this word, as in *hence* and *once*, represents an older *-es, whenn-es, henn-es, on-es*. Though the origin of the termination is thus disguised, its pronunciation is, probably, maintained; inasmuch as when, after the elision of the *e*, the words become sounded as monosyllables — *whens, hens, ons*—they run the chance of being pronounced *whenz, henz, onz*. The same is the case with *dice*, from *dye*, and *pence* for *pennies*.]

Theo-, a prefix in composition; Gr. θεὸς = God; the same word as Lat. *Deus*. The differences between the meanings of *Deist*, as opposed to a believer in revelation; and *Theist*, as opposed to *Atheist*, is a fair instance of the advantage a language may sometimes derive from having concurrent words from different languages.

Theobrómine. *s.* Active principle of chocolate; i. e. Theobroma and Cacao: (formed like Caffeine and Theine from coffee and tea).

Theobroma, a word coined from Gr. θεὸς and βρῶμα, food, is [the name of] a genus of Tropical American Byttneriaceæ. . . . Theobroma Cacao was the first known species of this genus, and the cacao or cocoa of commerce is now usually said to be produced by it, though it is probable that several of the other species afford a considerable portion. . . . Cocoa . . . contains a peculiar principle which is called *Theobromine* . . . a white bitter crystalline substance. Theódolite. *s.* [?] In *Surveying* and *Astronomy*. Instrument for measuring altitudes.

Nothing more than an accurate land-surveyor with his chain, sight, and *theodolite*, is requisite for such a plan as this.—*Burke, Reflections on the Revolution in France.*

The zenith sector and the *theodolite* are peculiar modifications of the altitude and azimuth instruments. The former is adapted for the very exact observation of stars in or near the zenith, by giving a great length to the vertical axis, and suppressing all the circumference of the vertical circle, except a few degrees of its lower part, by which a great length of radius, and a consequent proportional enlargement of the division of its arc, is obtained. The latter is especially devoted to the measures of horizontal angles between terrestrial objects, in which the telescope never requires to be elevated more than a few degrees, and in which therefore the vertical circle is either dispensed with or executed on a smaller scale, and with less delicacy; while, on the other hand, great care is bestowed on securing the exact perpendicularity of the plane of the telescope's motion, by resting its horizontal axis on two supports like the piers of a transit-instrument, which themselves are firmly bedded on the spokes of the horizontal circle, and turn with it.—*Sir J. F. W. Herschel, Outlines of Astronomy.*

Theógony. *s.* [Gr. *θεογονία*.] Generation of the heathen gods: (chiefly known as the title of a poem of Hesiod's, and, as such, a *proper* rather than a *common* name).

Theólogaster. *s.* Quack in divinity, as a medicaster in physick; low writer or student in divinity.

Theologasters are not contented to see the sun and moon, measure their sight and biggest distance in a glass, calculate their motions, or visit the moon in a poetical fiction; but will transcend spheres, soar higher yet, and see what God himself doth. The Jewish thalmudists take upon them to determine how God spends his whole time.—*Burton, Anatomy of Melancholy*, p. 255.

Theóloger. *s.* Theologian.

Azorius the Jesuit affirms, that it is the constant opinion of the *theologers*.—*Dr. H. More, Antidote against Atheism*, ch. ix.

Theológian. *s.* Student in, investigator of, teacher of, one employed on, or engaged in, theology.

They to their viands fell: nor seemingly
The angel, nor in mist, the common gloss
Of *theologians*, but with keen dispatch
Of real hunger. *Milton, Paradise Lost*, v. 434.

Theológic. *adj.* Theological.

Upon what principles does he erect his very new explication of *theologick* antiquity?—*Coventry, Philemon to Hyde*, conversation iv.

The most considerable part for this purpose is the chapter of Laws. Of which, under its *theologic* consideration, I know of nothing so complete and masterly as the first book of Hooker's Ecclesiastical Polity.—*Bishop Warburton, Letters to Bishop Hurd*, letter xxv.

John was allowed to devote himself to religious poetry, which was greatly admired, and to his *theologic* arguments in defence of images.—*Milman, History of Latin Christianity*, b iv ch. vii.

Of the two great *theologic* luminaries of the age, the Dominican Thomas Aquinas and the Franciscan Bonaventura, Thomas died on his way to the council: Bonaventura was present, preached during its sittings, but died before its dissolution.—*Ibid.* b. xi. ch. vi.

Theológical. *adj.* Connected with, relating to, theology.

Theológically. *adv.* In a theologic manner; according to the principles of theology.

Such things as exceed the faculty and possibility of nature, are properly and *theologically* miracles.—*Dr. Westfeild, Sermons*, p. 90: 1646.

Theólogist. *s.* Theologian.

It is no more an order, according to popish *theologists*, than the prima tonsura, they allowing only seven ecclesiastical *theologists*.—*Ayliffe, Parergon Juris Canonici.*

Theólogize. *v. a.* Render theological.

School-divinity was but Aristotle's philosophy *theologized*.—*Glanville, On the Pre-existence of Souls*, ch. iv.

Theólogizer. *s.* One who theologizes.

We are taught by Eusebius that the ancient Egyptian *theologizers*, whose religion was near of kin to that of the Chaldeans, if not borrowed of it, looked upon the sun and moon, whom they worshipped under the names of Osiris and Isis, not only as the chief gods, but as the makers and governours of much, if not of all, of the rest of the universe.—*Boyle, Free Enquiry.*

Théologue. *s.* Theologian; one studious in the science of divinity.

The cardinals of Rome, which are *theologues*, friars, and schoolmen, call all temporal business, of wars, embassages, shirrery, which is under sheriffries.—*Bacon, Essays.*

A *theologue* more by need than genial bent;
By breeding sharp, by nature confident;
Int'rest in all his actions was discern'd.
Dryden, Hind and Panther, iii. 1148.

Theólogy. *s.* [Gr. *θεολογία*.] Divinity.

The whole drift of the Scripture of God, what is it but only to teach *theology*? *Theology*, what is it but the science of things divine.—*Hooker, Ecclesiastical Polity.*

She was most dear to the king in regard of her knowledge in languages, in *theology*, and in philosophy.—*Sir J. Hayward.*

The oldest writers of *theology* were of this mind.—*Archbishop Tillotson.*

One great object that most of the schoolmen had in view was to establish the principles of natural *theology* by abstract reasoning. This reasoning was doubtless liable to great difficulties. But a modern writer, who seems tolerably acquainted with the subject, assures us that it would be difficult to mention any theoretical argument to prove the divine attributes, or any objection capable of being raised against the proof, which we do not find in some of the scholastic philosophers.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ix.

Theómachy. *s.* [Gr. *μάχομαι* = I fight; *μάχη* = battle.] The fight against the gods by the giants. (This is Dr. Johnson's definition from Bailey. It is used, however, for opposition to the divine will.)

To have all men happy or unhappy as they were our friends or enemies, and to give form to the world according to our own humours, is the true *theomachy*.—*Bacon, Advancement of Learning*, b. ii.

Who can distrust or oppose this happiness of good men, so long since assured by Him, which is the Eternal God, blessed for ever? Surely none, without the guilt of *theomachy* or ingratitude.—*Life of Gregory, Posthuma*, preface, A. 3: 1640.

Théopathétic. *adj.* Theopathic.

(For example see under Theosophist.)

Theopáthic. *adj.* Connected with, relating to, theopathy.

Proposition 171.—To deduce practical rules concerning the *theopathic* affections—faith, fear, gratitude, hope, trust, resignation, love.—*Hartley, On Man*, pt. ii. ch. iii. § 7. (Rich.)

He [Hartley] represents all the social affections of gratitude, veneration, love, inspired by the virtues of our fellow men, as capable of being transferred by association to the transcendant and unlimited goodness of the ruler of the world, and thus to give rise to piety, to which he gives the name of the *theopathic* affections.—*Sir J. Mackintosh.* (Rich.)

Theópathy. *s.* [Gr. *πάθος* = suffering, from the root of *πάσχω* = I suffer; *ἔ-παθ-ον* = I suffered.] Emotion excited by the contemplation of God.

Proposition 98.—To examine how far the pleasures and pains of *theopathy* are agreeable to the foregoing theory; under this class, I comprehend all those pleasures and pains which the contemplation of God and his attributes, and of our relation to him, raises up in the minds of different persons, or in the same person at different times.—*Hartley, On Man*, pt. i. ch. iv. s. 5. (Rich.)

Theóphany. *s.* [Gr. *φαίνω* = show; *φαίνομαι* = I appear, seem.] Manifestation of God.

With him [John Scot, Erigena] God is all things, all things are God. The Creator alone truly is; the universe is but a sublime *theophany*, a visible manifestation of God. He distinctly asserts the eternity of the universe; his dialectic proof of this he proclaims to be irresistible. Creation could not have been an accident of the Deity; it is of his essence to be a cause: all things therefore have existed, do exist, and will exist through him their cause. All things flow from the *infinite* abyss of the Godhead, and are re-absorbed into it.—*Milman, History of Latin Christianity*, b. viii. ch. v.

This contemplation of God, the consummate perfection of man, is immediate, not mediate. Through the angels and the celestial hierarchy of the Areopagite it aspires to one God, not in his *theophany*, but in his inmost essence. All ideas and forms of things are latent in the human soul, as in God, only they are manifested to the soul by its own activity, its meditative power.—*Ibid.*, b. xiv. ch. iii.

Theophilánthropist, and **Theophilánthropy.** *s.* [Gr. *θεὸς* + *φίλος* = friend (*φιλέω* = I love) + *ἄνθρωπος* = man.] See extract.

With a view of counteracting the latent fanaticism of the vulgar religion, the Directory gave great encouragement to a new sect recently established under the name of *theophilanthropists*.... These religionists, rejecting all revelation, confined their worship to the one Supreme Being.—*Belsham, George III.*: 1797. (Rich.)

Theórbo. *s.* [Italian.] In *Music*. Large lute for playing a thorough bass. See last extract.

Some that delight to touch the sterner wiry chord,
The cythron, the pandore, and the *theorbo* strike.
Drayton, Polyolbion, song iv.

You have put the *theorbo* into my hand, and I have played: you gave the musician the first encouragement; the musick returneth to you for patronage.—*Quarles, Emblems.* (Nares by H. and W.)

Off with her head, and then she hath a middle:
As her waist-stands she looks like the new fiddle,
The favourite *theorbo*, truth to tell ye,
Whose neck and throat are deeper than the belly.
Bishop Corbet, Iter Boreale.

My hounds uncoupled and my huntsmen ready,
You shall hear such music from their tunable mouths,
That you shall say the viol, harp, *theorbo*,
Ne'er made such ravishing harmony: from the groves
And neighbouring woods, with frequent iterations
Enamour'd of the cry, a thousand echoes
Repeating it. *Massinger, The Guardian*, i. 1.

He wanted nothing but a song,
And a well tuned *theorbo* hung
Upon a bough, to ease the pain
His tugg'd ears suffer'd with a strain.
Butler, Hudibras, i. 3, 165.

The first improvement on the French lute was the *theorbo* or Cithara bijuga, so called as having two necks, the second or longest whereof sustains the four last rows of chords, which give the deepest and gravest sounds. Its use is to play thorough bass in the accompaniment of the voice. Brossard intimates that it was invented in France by the Sieur Hotteman, and thence introduced in Italy. But Kircher gives a different account of the matter, saying that it received its name from a certain Neapolitan who first doubled the neck of the testudo or lute, and added several chords to it. He says that the author of this improvement, with a kind of pun, gave to this instrument the name of *tiorbo* from its near resemblance to a utensil so called, in which the glovers of Italy were wont, as in a mortar, to pound perfumes. Kircher adds that Hieronymus Kapsperger, a noble German, was the first that brought the *theorbo* into repute, and that in his time it had the preference of all other instruments. The strings of the *theorbo*, properly so called, are single; nevertheless, there are many who double the bass strings with an octave, and the small ones with a unison, in which case it assumes a new appellation, and is called the arch lute. Mersennus is extremely accurate in his description of the lute and the *theorbo*, but he has not noted the diversity between the latter and the arch-lute.—*Sir J. Hawkins, History of Music*, vol. iii. p. 162.

Théorem. *s.* [Gr. *θεώρημα*.]

1. Position laid down as an acknowledged truth.

Having found this the head *theorem* of all their discourses, who plead for the change of ecclesiastical government in England, we hold it necessary that the proofs thereof be weighed.—*Hooker, Ecclesiastical Polity.*

The chief points of *morality* are no less demonstrable than mathematicks; nor is the subtilty greater in moral *theorems* than in mathematical.—*Dr. H. More, Divine Dialogues.*

2. Position requiring to be proved, as opposed to a problem wherein something has to be solved.

Theorémic. *adj.* Having the character of, relating to, a theorem.

Theoremick truth, or that which lies in the conceptions we have of things, is negative or positive.—*Grew.*

Theorétic. *adj.* Theoretical.

Admirably well turned, not only for the *theoretick*, but also the practical behaviour of cunning fellows. —*Tatler*, no. 191.

Theorétical. *adj.* Pertaining to, consisting in, theory; speculative; not practical.

Théoric, or **Théorique.** *s.* Speculation; not practice; theory. *Rare.*

The bookish *theorick*,
Wherein the toged consuls can propose
As masterly as he; meer prattle, without practice,
Is all his soldiership. *Shakespear, Othello*, i. 1.

When he speaks,
The air, a charter'd libertine, is still;
And the mute wonder lurketh in men's ears,
To steal his sweet and honied sentences:
So that the act and practick part of life
Must be the mistress to this *theorique*.
Id., Henry V. i. 1.

Theórically. *adv.* In the manner of, as a theory.

Able to discourse *theorically* of the dimensions, situation, and motion, of the whole terrestrial globe. —*Boyle, On the Study of Holy Scripture*, p. 117.

Théorist. *s.* Speculatist; one given to speculation.

The greatest *theorists* have given the preference to such a government as that which obtains in this kingdom.—*Addison.*

It is a curious circumstance that a man [Dudley North] who, as a *theorist*, was distinguished from all the merchants of his time by the largeness of his views and by his superiority to vulgar prejudices, should, in practice, have been distinguished from all the merchants of his time by the obstinacy with which he adhered to an ancient mode of doing business, long after the dullest and most ignorant plodders had abandoned that mode for one better suited to a great commercial society.—*Macaulay, History of England*, ch. xx.

'What, Charley, you want to puzzle us by the interrogatory plan? You must know, Clarion, he is a great *theorist*. He has a project for settling the eastern difficulty by making Lamartine king of Syria.'—*Hannay, Singleton Fontenoy.*

Théorize. *v. n.* Entertain, indulge in, theories, or any particular theory.

Were a theory open to no objection it would cease to be a theory, and would become a law; and were we not to *theorize*, or to take generalized views of natural phenomena until those generalizations were sure and unobjectionable,—in other words, were laws,—science would be lost in a complex mass of unconnected observations, which would probably never disentangle themselves.—*Grove, Correlation of Physical Forces.*

Théorizer. *s.* One who theorizes; one who indulges in theory rather than in practice; theorist.

For . . . mineralogy . . . Novalis . . . had a great fondness . . . he seems to have prosecuted it on a great and original plan, very different both from that of our idle *theorisers* . . . generalizers, and that of the still more melancholy class, who merely 'collect facts,' and for the torpor or total extinction of the thinking faculty, strive to make up by the more assiduous use of the blowpipe and goniometer. —*Carlyle, Critical and Miscellaneous Essays, Novalis.*

Théory. *s.*

1. Speculation; scheme; plan or system yet subsisting only in the mind: (opposed to *practice*).

If they had been themselves to execute their own *theory* in this church, they would have seen, being nearer.—*Hooker, Ecclesiastical Polity.*

In making gold, the means hitherto propounded to effect it are in the practice full of errour, and in the *theory* full of unsound imagination.—*Bacon, Natural and Experimental History.*

Practice alone divides the world into virtuous and vicious; but as to the *theory* and speculation of virtue and vice, mankind are much the same.—*South, Sermons.*

2. Opposed to *hypothesis*; in which case it means that which will not merely explain certain phenomena, but which has some evidence to support it over and above such explanation.

It seems to me a great delusion to call or suppose the imagination of a subtle fluid, or molecules penetrable with the same, a legitimate hypothesis. It is a mere suffiction. Newton took the fact of bodies falling to the centre, and upon that built up a legitimate hypothesis. It was a subposition of something certain. But Descartes' vortices were not an hypothesis; they rested on no fact at all; and yet they did, in a clumsy way, explain the motions of the heavenly bodies. But your subtle fluid is pure gratuitous assumption; and for what use? It explains nothing. . . . The use of a *theory* in the real sciences is to help the investigator to a complete view of all the hitherto discovered facts relating to the science in question; it is a collected view, *θεωρία*, of all he yet knows in one. Of course, whilst any pertinent facts remain unknown, no *theory* can be exactly true, because every new fact must necessarily, to a greater or less degree, displace the relation of all the others. A *theory*, therefore, only helps investigation; it cannot invent or discover. The only true *theories* are those of geometry, because in geometry all the premisses are true and unalterable.—*Coleridge, Table Talk.*

Theósopher. *s.* Theosophist.

Theosóphical. *adj.* Wise after the manner of a theosophist.

There is a various intertexture of *theosophical* and philosophical truths.—*Dr. H. More, Conjectura Cabbalistica*, p. 104: 1653.

Theósophism. *s.* Theosophy, for which it is a term of disparagement.

Many traces of the spirit of *theosophism* may be found through the whole history of philosophy; in which nothing is more frequent than fanatical and hypocritical pretensions to divine illumination.—*Enfield, History of Philosophy.* (Rich.)

Theósophist. *s.* One who cultivates, or affects, theosophy; one professing to hold intercourse with God and heavenly spirits.

This disease [enthusiasm] many of your chymists and several *theosophists*, in my judgement, seem very obnoxious to, who dictate their own conceits and fancies so magisterially and imperiously, as if they were indeed authentick messengers from God Almighty.—*Dr. H. More, Discourse on Enthusiasm.* (Rich.)

Theosophist [is] a name which has been given, though not with any very definite meaning, to that class of mystical religious thinkers and writers who aim at displaying, or believe themselves to possess, a knowledge of the divinity and his works by supernatural inspiration. In this they differ from the mystics who have been styled *theopathetic*, whose object is passively to receive the supposed communication of the divinity and expatiate on the results. The best-known names at this day of the theosophic order are those of Jacob Böhme, Madame Guyon, Swedenborg, Saint-Martin. Schelling and others, who regarded the foundation of their metaphysical tenets as resting on divine intuition, have been called *theosophists*, but with less exactness.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Theósophy. *s.* [Gr. *σοφία* = wisdom; *σοφὸς* = wise.] System of thought considered by those who cultivate it to partake of the nature of divine knowledge. When the emotions are largely affected by it, it approaches Theopathy: (for example see the second extract under Theosophist. In the opposite direction, where it is supposed to be a substitute for inductive investigation, the chief example is Paracelsus, whom Brucker expressly calls 'the prince of the theosophers').

But Xenophanes, his *theosophy* or divine philosophy, is most fully declared by Simplicius.—*Cudworth, Intellectual System*, p. 377. (Rich.)

The strange chaotic nature of the man is displayed in it; his scepticism and *theosophy*.—*Carlyle, Critical and Miscellaneous Essays, Writings of Werner.*

Therapeútic. *adj.* [Gr. *θεραπευτικός*; *θεραπεύω* = I tend as healer, heal.] Curative, relating to, connected with, aiming at, the cure of disease.

Therapeutic or curative physick restoreth the patient into sanity, and taketh away diseases actually affecting.—*Sir T. Browne.*

Medicine is justly distributed into prophylactick, or the art of preserving, health; and *therapeutic*, or the art of restoring it.—*Watts.*

It is objected, that Shilo affirms that his *therapeutick* sect prayed only twice a day, whereas it is very well known that the primitive christians had their several other hours of prayer.—*Parker, Law of Nature*, p. 247. (Ord MS.)

Therapeútical. *adj.* Therapeutic.

This remedy, in my opinion, should rather be prophylactical, for prevention of the disease, than *therapeutical* for the cure of it.—*Chilmead, Translation of Ferrand, On Love Melancholy*, p. 336: 1640.

Therapeútics, *s.* [see Chromatics.] Part of medicine which deals with the treatment, cure, or attempted cure, of diseases: (as opposed to the *pathological* part).

Such was medical investigation, before physiology and natural history began to be cultivated as branches of general knowledge. The only questions examined were, what diet is wholesome, or what medicine will cure some given disease. . . . And in politics, the questions which engaged general attention were similar. Is such an enactment, or such a form of government, beneficial or the reverse—either universally, or to some particular community? without inquiry into the general conditions by which the operation of legislative measures, or the effects produced by forms of government, are determined. Students in politics thus attempted to study the pathology and *therapeutics* of the social body, before they had laid the necessary foundation in its physiology; to cure disease, without understanding the laws of health.—*J. S. Mill, System of Logic*, pt. vi. ch. vi. § 1.

A guard *there*; seize her.
Dryden, Aurengzebe, ii. 1.

4. It is used at the beginning of a sentence with the appearance of a nominative case, but serves only to throw the nominative behind the verb: as, 'A man came,' or, '*There* came a man.' It adds however some emphasis, which, like many other idioms in every language, must be learned by custom, and can hardly be explained. It cannot always be omitted without harshness: (as, 'In old times *there* was a great king').

For reformation of errour *there* were that thought it a part of Christian charity to instruct them,—*Hooker, Ecclesiastical Polity.*

There can only be the predicate of a proposition, differing in this respect from it. Hence it never affects the number of the verb; which is determined by the nature of the subject—'*There* is this'—'*There* are these.' . . . Furthermore, although a predicate, *there* always stands in the beginning of propositions; i. e. in the place of the subject.—*Dr. R. G. Latham, The English Language*, § 668: 1862.

Thérmal. *adj.* [Lat. *thermæ* (feminine and plural, from the Greek, θερμὸς = warm) = warm baths; the scientific compounds into which this word enters belong more properly to the Greek form.]

1. Relating to warm baths, natural or artificial.

2. Connected with, relating to, heat in general.

The same *thermal* undulations which, if the physiological units are comparatively free, will aid their re-arrangement by giving them still greater freedom, will, if they are comparatively fixed, begin to change the arrangements of their components—will decompose them.—*Herbert Spencer, The Inductions of Biology.*

Thérmic. *adj.* Thermal.

In 1823-25, he had by this means prepared the basis of his great work on volcanoes, which appeared in 1826, and contained careful descriptions of all the regions known to be visited by igneous eruptions, and a consistent hypothesis of the cause of the *thermic* disturbance, in accordance with the view first proposed by Gay-Lussac and Davy.—*General Sabine*, in *Proceedings of the Royal Society.*

Thérmo-electrícity. *s.* See extract.

When the junction of two dissimilar metals is heated or cooled, the free ends being joined by a wire, an electric current is generated. This developement of electricity by heat was discovered by Prof. Seebeck in 1822, and has received the name of *thermo-electricity*: in its theoretical and practical applications it is a fact of great importance. The intensity of the thermo-electric current depends on two things: the nature of the metals employed, and the difference in temperature which exists between the two ends of the metal bars. The metals have been found by experiment to stand in the following thermo-electric order: bismuth, nickel, German silver, brass, lead, tin, copper, platinum, silver, zinc, iron, antimony, tellurium, selenium. If two of these metals be taken, the more distant their position in the list the stronger is the current that will be generated. Hence the electro-motive force of bismuth and selenium is the greatest; but as it is generally impracticable to employ the last two metals on the list, bismuth and antimony form the usual thermo-electric couple.—*Frankland*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Thermómeter. *s.* [Gr. μέτρον = measure.] Instrument for measuring the heat of the air, or of any matter.

The greatest heat is about two in the afternoon, when the sun is past the meridian, as is evident from the *thermometer*, or observations of the weather-glass.—*Sir T. Browne.*

Thermométrical. *adj.* Relating to the measure of heat.

His heat raises the liquor in the *thermometrical* tubes.—*Cheyne.*

Thérmoscope. *s.* [Gr. σκοπέω = I see, descry, view.] Instrument by which the degrees of heat are discovered; thermometer; modification of the air-thermometer so called.

By the trial of the *thermoscope*, fishes have more heat than the element which they swim in.—*Arbuthnot, On the Nature and Choice of Aliments.*

Thérmostat. *s.* [Gr. *-στάτης, -στατικός*, from the root of *ἵστημι* = I stand.] See extract.

Thermostat or heat governor [is] a self-acting physical apparatus for regulating temperature. A *thermostat*, the principle of which depends on the unequal expansion of metals by heat, was proposed by Dr. Ure for regulating the safety valves of steam engines with more certainty than the common expedients.—*Hirst*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Thermótics. *s.* [see Chromatics.] Doctrine, philosophy, of heat.

I shall, then, successively, have to speak of the ideas which are the foundation of geometry and arithmetic; . . . of the ideas on which the mechanical sciences . . . more peculiarly rest; . . . of the ideas which the secondary mechanical sciences (acoustics, optics, and *thermotics*) involve; namely, the ideas of the externality of objects, and of the media by which we perceive their qualities.—*Whewell, History of Scientific Ideas*, vol. i. p. 82: 1858.

As optics relate to the phenomena which result from the action of light upon matter, so under the term *thermotics* may be included those effects which are caused by the action of heat upon matter.—*Hirst*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

These. *pron.* Collective form of *this*; the difference between them consisting as in *goose, geese*; *mouse, mice*, &c., in the change of the vowel rather than in the addition of any plural sign; the final *s* being common to both numbers.

1. Opposed to *those*, or to some others.

Did we for *these* barbarians plant and sow?
On *these*, on *these* our happy fields bestow?
Dryden, Translation of Virgil, Eclogues, i. 97.

2. *These* relates to the persons or things last mentioned; and *those* to the first. See under That for remarks upon *this and that* in a similar relation.

More rain falls in June and July than in December and January; but it makes a much greater shew upon the earth in *these* months than in *those*, because it lies longer upon it.—*Woodward, Essay towards a Natural History of the Earth.*

Thésis. *s.* [Gr. = position; the two words translating one another; *pono* = I put; pass. part. *positus*; *positio, -onis*; *τίθημι* = I place: *θετικός* has the same relation to *positive*.] Position; something laid down, affirmatively or negatively.

The truth of what you here lay down,
By some example should be shown.—
An honest, but a simple pair . . .
May serve to make this *thesis* clear.
Prior, Paulo Purganti.

Théspian. *adj.* Connected with Thespis, the inventor of the Greek comedy, and, as such, a *proper* rather than a *common* name; used, however, somewhat rhetorically for theatrical, or dramatic.

Yes, France is free. O glorious France, that has burst out so; into universal sound and smoke; and attained—the Phrygian cap of liberty! In all towns, trees of liberty also may be planted; with or without advantage. Said we not, it was the highest stretch attained by the *Thespian* art on this planet, or perhaps attainable?—The *Thespian* art, unfortunately, one must still call it; for behold there, on this Field of Mars, the national banners, before there could be any swearing, were to be all blessed.—*Carlyle, The French Revolution*, pt. ii. b. i. ch. xii.

Thétical. *adj.* Laid down; positive.

This law . . . was merely *thetical* or positive, not indispensable and natural.—*Dr. H. More, Conjectura Cabbalistica*, p. 127: 1653.

All his endeavour to purge his soul by these *theurgick* consecrations was frustrate.—*Halliwell, Melampronœa*, p. 51.

Both of these, the goetic and *theurgic*, seem to be of Egyptian origin; and it is evident, at least, that their practitioners appeared to pride themselves on drawing their chief secrets from that ancient source; and both are intimately connected with astrology.—*Lord Lytton, Last Days of Pompeii*, notes.

Theúrgical. *adj* Theurgic.

The reason of their calling inspiration by the names of fire, flame, flash, and the like, may be easily found in the authors of the *theurgical* science.—*Daubuz on the Revelations*, edited by *P. Lancaster*, p. 52.

Théurgist. *s.* One who is addicted to theurgy.

More refined necromancers or magicians call themselves *theurgists*; . . . thinking to have to do only with good spirits.—*Halliwell, Melampronœa*, p. 50.

Théurgy. *s.* [Gr. *θεουργία*; *ἔργον* = work.] The power of doing supernatural things by lawful means, as by prayer to God.—This is Dr. Johnson's definition from Bailey. But the meaning also is a species of magic, in old times, which was employed for the assistance of supernatural beings to effect wonderful things.

Porphyry and some others did distinguish these two sorts, so as condemn indeed the grosser, which they called magick or goety; but allowed the other, which they termed *theurgy*, as laudable and honourable, and as an art by which they received angels, and had communication with the gods. Yet St. Austin assures us, they are both damnable.—*Halliwell, Melampronœa*, p. 51: 1682.

Thew. *s.* [A.S. *þeaw.*]

Different languages have different modes of expressing indeterminate propositions. In Greek, Latin, and English the passive voice is used—*Λέγεται*, Dicitur, It is said. The Italians use the reflective pronoun, as, *si-dice* = it says itself. Sometimes the plural pronoun of the third person is used. Thus, in our language, They say = the world at large says.—*Dr. R. G. Latham, The English Language*, § 666: 1862.

The *thigh* includes all between the buttocks and the knee. The thighbone is the longest of all the

bones in the body: its fibres are close and hard: it has a cavity in its middle; it is a little convex and round on its foreside, but a little hollow, with a long and small ridge on its backside.—*Quincy.*

Thighbone. *s.* Bone of the thigh.

The whole book, and every component part of it, is on a gigantic scale.—*Macaulay, Critical and Historical Essays, Burleigh and his Times.*

As the *first element* in a *compound*; entered in the preceding editions, with the exception of the fifth extract, which is found under the *adjective*, as an *adverb*. The construction is, doubtless, *adverbial*; and in *thin-sown* the element *thin* may certainly be superseded by *thinly.*

Spain is *thin-sown* of people, by reason of the sterility of the soil and the natives being exhausted in such vast territories as they possess.—*Bacon.*

Remove the swelling epithets, thick laid

As 'tis to shun the brother of my king.

In plainer words the original man is the true creator (or call him revealer) of morals too; it is from his example that precepts enough are derived, and written down in books and systems; he properly is the *thing*; all that follows after is but talk about the *thing,* better or worse interpretation of it, more or less wearisome and ineffectual discourse of logic on it.—*Carlyle, Critical and Miscellaneous Essays, Mirabeau.*

2. Used in contempt or by way of extenuation.

I have a *thing* in prose, begun above twenty-eight years ago, and almost finished; it will make a four-shilling volume.—*Swift.*

3. In contempt, qualified by pity.

Falls to revolt, when gold becomes her object!

Thou noble *thing!* more dances my wrapt heart.

Thin-gut. *s.* Starveling.

Think. *v. n.* [A.S. *þincan,* pret. *þuhte.*] Seem: (obsolete, except when preceded by *me,* in which case *me* = *to me,* rather than *me,* and is dative rather than accusative; moreover, the subject *it* is understood; hence, this combination gives a truly impersonal verb).

Me thinketh. It seems to me.

Me thinketh the running of the foremost is like the running of Ahimaaz.—2 *Samuel,* xviii. 27.

Methought. It appeared to me.

Me thought I saw the grave where Laura lay.
Sir P. Sidney.

These are anomalous phrases of long continuance and great authority, but not easily reconciled to grammar. In *me thinketh,* the verb being of the third person, seems to be referred not to the thing, and is therefore either active, as signifying *to cause to think*; or has the sense of *seems*; *me thinks* = *it seems to me.* (Johnson.) The true explanation lies in the difference between the two verbs, which are as different as *rise* and *raise, lie,* and *lay, drink* and *drench.*

Thinker. *s.* One who thinks.
Nobody is made anything by hearing of rules, or laying them up in his memory; practice must settle the habit; you may as well hope to make a good musician by a lecture on the art of musick, as a coherent *thinker*, or strict reasoner, by a set of rules.—*Locke.*

The truth of the matter seems to be, that with the culture of a genuine poet, *thinker*, or other artist, the influence of rank has no exclusive or even special concern.—*Carlyle, Critical and Miscellaneous Essays, State of German Literature.*
I allude to the discoveries made by Political Economy; a branch of knowledge with which even the wisest of the ancients had not the least acquaintance, but which possesses an importance it would be difficult to exaggerate, and is, moreover, remarkable as being the only subject immediately connected with the art of government that has yet been raised to a science. The practical value of this noble study, though perhaps only fully known to the more advanced *thinkers*, is gradually becoming recognized by men of ordinary education: but even those by whom it is understood, seem to have paid little attention to the way in which, by its influence, the interests of peace, and therefore of civilization, have been directly promoted.—*Buckle, History of Civilization in England*, vol. i. ch. iv.

A *throne* where kings, our earthly gods, were crown'd.
Dryden, Epistles, To Dr. Charleton, 47.

With *the* denoting the royal power.

The proper business of the House of Commons was to petition for redress of grievances as much as to provide for the necessities of the crown. In the prudent fiction of English law, no wrong is supposed to proceed from the source of right. The *throne* is fixed upon a pinnacle, which perpetual beams of truth and justice irradiate, though corruption and partiality may occupy the middle region, and cast their chill shade upon all below.—*Hallam, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

2. Seat of a bishop.

Hear, all ye angels, progeny of light,
Thrones, dominations, princedoms, virtues, powers.
Milton, Paradise Lost, v. 600.

The primal godhead, the Trinity in Unity, was alone absolute, ineffable, inconceivable; alone essential purity, light, knowledge, truth, beauty, goodness. These qualities were communicated in larger measure in proportion to their closer approximation to itself, to the three descending triads which formed the celestial hierarchy:—I. The seraphim, cherubim, and *thrones*. II. The dominations, virtues, powers. III. Principalities, archangels, angels. This celestial hierarchy formed, as it were, concentric circles around the unapproachable Trinity. The nearest, and as nearest partaking most fully of the divine essence, was the place of honour. The *thrones*, seraphim, and cherubim approximated most closely, with nothing intermediate, and were more immediately and eternally conformed to the godhead.—*Milman, History of Latin Christianity*, b. xiv. ch. ii.

Throng. *adj.* Much occupied. *Provincial.*

I demand what perfection can be in the spirits of these just men to be overwhelmed in a senseless sleep; or what a disproportionable and unsuitable representation it is of this *throng* theatre in heaven, made up of saints and angels, that so great a part of them as the souls of the holy men deceased should be found drooping or quite drowned in an unactive lethargy? — *Dr. H. More, Mystery of Godliness*, p. 28: 1660.

More, Conjectura Cabbalistica*, p. 37: 1653.

The usual torture [in Scotland] which was called the torture of the boots, was to place the leg in a frame, into which wedges were driven, until the bones were broken. But when James visited Scotland, an opinion began to grow up, that this was too lenient, and that other means must be devised. The spirit which he communicated to his subordinates, animated his immediate successors, and, in 1684, during his absence, a new instrument was introduced, termed the *thumbikins*. This was composed of small steel screws, arranged with such diabolical art, that not only the thumb, but also the whole hand, could be compressed by them, producing pain more exquisite than any hitherto known, and having, moreover, the advantage of not endangering life; so that the torture could be frequently repeated on the same person.—*Buckle, History of Civilization in England*, vol. i. ch. iv.
After this communing, the king's smith was called in, to bring in a new instrument to torture by the *thumbkins*, that had never been used before. Thylacine, or **Thylacínus.** *s.* [Gr. *θύλαξ* = bag, pouch + *κύων* = dog.] Marsupial animal of the genus Thylacinus (species, cynocephalus).

The *thylacinus* inhabits Van Diemen's Land, where it is called the tiger-hyæna, and used formerly to be known among the colonists by the names of zebra-opossum and zebra-wolf. . . . Mr. Gunn observes that the *thylacinus* is common in the more remote parts of the colony, and is often caught at Woolnorth and Hampshire hills. It usually attacks sheep in the night, but is also seen during the daytime; upon which occasions, perhaps from imperfect vision by day, its pace is very slow. . . . Mr. Gunn says the devil (Dasyurus ursinus) is destructive to sheep all over the colony, and is, indeed, the most destructive of our indigenous quadrupeds, the *thylacinus* being much scarcer.—*Waterhouse*, in *Naturalist's Library, Marsupiala.*

The tympanic has preserved its distinctness in the *thylacine*, but has coalesced with other elements of the temporal bone in the dog. A wide and deep groove divides the bulla from the basisphenoid in the *thylacine*, but the sides of the basisphenoid in the dingo are swollen and abut against the large tympanic bullæ. The articular cavities for the lower jaw are much nearer the occiput in the *thylacine* than in the dingo, and the malar bones enter partially into their formation. There are two large vacuities in the back part of the bony palate in the *thylacine*, but this part is entire in the dingo. The antorbital foramina are larger in the *thylacine*, and much nearer the orbits than in the dingo; they are also formed partly by the malar, and are not wholly perforated in the maxillary bone, as in the dingo: the lacrymal bone is much larger in the dingo, and encroaches much more upon the face: the nasal bones are broader posteriorly in the dingo, and extend further back, as compared with the maxillaries. The petrosals are much larger in the dingo, and send bony plates into the tentorium, which plates are not present in the *thylacine*. The chief bony part of the tentorium projects from near the middle of the occiput, and does not reach the petrosal in the wild dog. The sella turcica is defined by the posterior clinoid processes in the dingo, but not in the *thylacine*. The foramina optica and lacera anteriora are blended together in the *thylacine*, but are distinct in the dog. Although the olfactory chamber is so much larger in the *thylacine*, the rhinencephalic fossa is smaller than in the dog. The lower jaw, besides its greater length and slenderness in the *thylacine*, differs by the bending in of the angle, which is the characteristic of the Marsupials. In most of these distinctions the *thylacine* manifests its nearer affinity to the oviparous type of skeleton. —*Owen, Anatomy of Vertebrates*, vol. iii. p. 504.

Thyme. *s.* [Lat. *thymum*; Gr. *θύμον*, and *θύμος*.] Native plant of the genus Thymus; the wild plant has been called, with doubtful propriety, Mother of Thyme.

No more, my goats, shall I behold you climb
The steepy cliffs, or crop the flow'ry *thyme*.
Dryden, Translation of Virgil, Eclogues, i. 104.

The *thyme* hath a labiated flower, consisting of one leaf, whose upper-lip is erect, and generally split in two, and the under-lip is divided into three parts; out of the flower-cup arises the pointal, accompanied by four embrios, which afterward become so many seeds, inclosed in a husk, which before was the flower-cup; to these marks must be added hard ligneous stalks, and flowers gathered into heads.—*Miller, Gardener's Dictionary.*

The wild *thyme* is common throughout temperate Europe and Asia, and Northern Africa. The common or garden *thyme*, which grows more erect than the wild *thyme*, is a native of Spain and Italy. . . . The Romans were well acquainted with *thyme*, which was one of the plants recommended to be grown for the sake of bees. The lemon-scented *thyme* is a hardy dwarf trailing evergreen, possessing the most agreeable perfume of any of its genus. It has long been cultivated in this country, and is used for the same purposes as the other species. It attains the greatest perfection when grown in dry light sandy soil.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Thyme. *v. a.* In the extract, cover, supply with thyme. *Rare.*

Thýmus. *s.* [Gr. *θύμος* = wart; Lat. *thymium*, both simple and as the second element in a compound, *acrothymium.*] In *Anatomy.* Gland without a duct, in front of the lungs, decreasing or disappearing as age advances. See also Sweetbread.

The materials separated from the blood by the ordinary process of secretion by glands, are always discharged from the organ in which they are formed; and are either straightway expelled from the body, or if they are again received into the blood, it is only after they have been altered from their original condition, as in the cases of the saliva and bile. There appears, however, to be a modification of the process of secretion in which certain materials are abstracted from the blood, undergo some change, and are added to the lymph, or restored to the blood, without being previously discharged from the secreting organ, or made use of for any secondary purpose. The bodies in which this modified form of secretion takes place are usually described as vascular glands, or glands without ducts; and include the spleen, the *thymus*, and thyroid glands, and the supra-renal capsules, and, according to Œsterlen, and Ecker, and Gall, the pineal gland, and pituitary body.—*Kirkes, Handbook of Physiology*, ch. xii.

The *thymus* in monotremes lies between the episternum and the beginnings of the vessels from the aortic arch. In a kangaroo from the pouch Simon found the *thymus* on the pericardium with a medial lobe besides the two lateral ones. In rodents the *thymus* consists of two long lobes extending from the base of the heart, parallel with each other, forward, to the root of the neck. Bodies extending from this position to the posterior mediastinum and forward along the cervical vessels to near the mandible, but consisting, according to Simon, of aggregates of fat-vesicles, undergo periodical increase, in the marmots, prior to hibernation. In a bat dissected in March, Dr. H. Jones could not detect any certain homologue of a *thymus*; but found on each side of the root of the neck a yellowish lobulated mass consisting of conical lobes defined by limitary membrane: the lobes were hollow and filled by aggregations of celloid particles, which were not manifestly nucleated, nor provided with an envelope, but consisted of aggregations of oil-drops and molecules.'—*Owen, Anatomy of Vertebrates*, vol. iii. p. 567.

That the connexions of the thyroid are from the first with the larynx and trachea, rather than with the *thymus*, is rendered more probable by the appearances observed in the young of animals. In a fœtal rabbit, eight-tenths of an inch long, the *thymus* may be seen to consist of two lobulated masses, lying side by side just above the heart and its great vessels, broader at the base towards the thorax, diverging a little as they pass upwards, and ending in the root of the neck by a somewhat pointed extremity.—*Callender, On the Thyroid Body*, in *Proceedings of the Royal Society*: 1867.

Thýmy. *adj.* Abounding in thyme.

Guide my way
Through fair Lyceum's walk, the green retreats
Of Academus, and the *thymy* vale,
Where oft inchanted with Socratic sounds,
Ilissus pure devolved his tuneful stream
In gentler murmurs.
Akenside, Pleasures of Imagination, b. i.

A goat, as vain as goat could be,
Affected singularity.
Where'er a *thymy* bank he found,
He rolled upon the fragrant ground;
And then, with fond affection, stood
And view'd his image in the flood.
Gay, Fables, The Goat without a Beard.

The scudding hare
Draws to her dew-sprent seat, o'er *thymy* heaths,
A path as gently waving. *Mason, English Garden.*

Thýroid. *s.* [Gr. *θύρα* = door + *εἶδος* = form.] In *Anatomy.* Gland without a duct, in front and at the side of the larynx. See, also, under Sweetbread.

By examination of the *thyroid* body in the fœtus, we learn that it has from an early period much the same relations and appearances as belong to it in childhood, and during the adult condition, and we observe those diversities of its parts which are exceptionally recognized during the later periods of life. We may thus trace out the origin of such exceptional conditions, and notice, more especially, how the isthmus of Eustachius and the pyramid of Lalouette are connected with the formation of the *thyroid*, and depend for their after characters upon early changes during development of size.—*Callender, On the Thyroid Body, in Proceedings of the Royal Society*: 1867.

Thysélf. *pron.* Thou, personally.

Come high or low,
Thyself and office deftly show.
Shakespear, Macbeth, iv. 1.

Of beaming sunny rays a golden *tiar*
Circled his head. *Milton, Paradise Lost*, iii. 624.

A *tiar* wreathed her head with many a fold,
Her waist was circled with a zone of gold. *Pope.*

Tiára. *s.* [Lat. *tiura* and *tiaras*; Gr. *τιάρα*; probably of Persian or Phrygian origin.] Bonnet of the old Persian kings and nobles.

Old Priam, and this golden sceptre bore
In full assemblies.
Dryden, Translation of the Æneid, vii. 337.

Fairer she seem'd distinguish'd from the rest,
And better mien disclosed, as better drest:
A bright *tiara* round her forehead tied,
To juster bounds confined its rising pride.
Prior, Solomon, ii. 505.

They put the *tiara*, which was the mark of regal dignity, on Ochus' head, and proclaimed him king.—*Translation of Rollin's Ancient History*, b. viii. ch. i. sect. i.

Thrones, altars, judgment-seats, and prisons, wherein,
And beside which, by wretched men were borne
Sceptres, *tiaras*, swords, and chains, and tomes
Of reasoned wrong, glozed on by ignorance,
Were like those monstrous and barbaric shapes,
The ghosts of a no-more-remembered fame,
Which, from their unworn obelisks, look forth
In triumph o'er the palaces and tombs
Of those who were their conquerors.
Shelley, Prometheus Unbound.

The State . . . may drag onwards, even when it has reached the utmost goal, a worthless load of life; it may aspire to the resemblance of that Nebuchadnezzar, who, from the *tiara* and the purple, came to herd with brutes. Like him, it may feed on herbage; and the Church of God must not seek to harm it, but must still reverence the power legitimate, though degraded and abused.—*Gladstone, The State in its Relations with the Church*, ch. x. § 7.

Instead of rival popes contending for advancement, pope and antipope in eager haste to array themselves in the *tiara*, all seemed to shrink from the perilous dignity.—*Milman, History of Latin Christianity*, b. viii. ch. vi.

The apostolic *tiara* devolved on the Cardinal Ugolino, of the noble house of Conti, which had given to the Holy See Innocent III.—*Ibid.* b. x. ch. i.

Tíbia. *s.* [Lat. = flute.] In *Anatomy.* Bone of the leg between the knee and ankle.

The *tibia* next to the femur is the longest bone in the skeleton. Situate at the anterior and inner side of the leg, it alone receives from the femur, under which it is placed vertically, the weight of the trunk, and communicates it to the foot. Like the other long bones, it is divided into a body and two extremities. The *tibia* articulates with the femur, the fibula, and the astragalus. The *tibia* is formed from one principal centre of ossification, with the two additional ones for epiphyses. The process begins at the middle of the bone, about the same time as in the femur. M. Cruvelhier mentions a case in which it preceded that bone, and from this point extended over the shaft.—*Quain, Elements of Anatomy*, by *Sharpey and Ellis*, vol. i. pp. 156–158: 1856.

Tic, or **Tic dóloureux.** *s.* [Fr.] In *Medicine.* Neuralgic affection of the face.

Facial neuralgia—Neuralgia faciei—*Tic douloureux* . . . perhaps cannot be better defined than as pain varying in its character, always excessive, generally intermittent; returning sometimes at regular intervals, but more frequently after irregular periods; seated in one of the branches of nerves of the face, and extending in various directions through certain of their ramifications; existing without evidence of inflammation or of fever; and although occasionally connected with organic changes in some part related to the affected nerve, yet as often occurring without such morbid relations, or without any obvious connection with them, in some cases where they are found to exist. . . . The symptoms of *tic* are chiefly the intensity and paroxysmal nature of the pain constituting it. The pain occurs, or is exacerbated, in fits; the succession of a various number of fits constitutes an attack, which may be of uncertain duration, and leave the patient comparatively well in the intervals, which also are of uncertain continuance.—*Copland, Dictionary of Practical Medicine.*

Tice. *v. a.* Entice.

What is in your lip
To *tice* the enamour'd soul to dwell with more
Ambition, than the yet unwither'd blush
That speaks the innocence of mine?
Beaumont and Fletcher, Coronation.

Lovely enchanting language, sugar-cane,
Honey of roses, whither wilt thou fly?
Hath some fond lover *ticed* thee to thy bane?
And wilt thou leave the church, and love a sty?
G. Herbert.

Tíchorrhine. *adj.* [Gr. *τεῖχος* = wall + *ῥίν*, *ῥινὸς* = nostril.] Term applied to an extinct species of rhinoceros, of which the septum of the nostrils, being bony, is suggestive of a wall.

The rhinoceros, like the elephant, was represented

in pliocene and pleistocene times in temperate and northern latitudes of Asia and Europe by extinct species. One (Rhinoceros leptorhinus) associated with the Hippotamus major in fresh-water pleiocene deposits; another (R. *tichorrhinus*) with the mammoth in pleistocene beds and drift. The discovery of the carcase of the *tichorrhine* rhinoceros in frozen soil is recorded by Pallas.—*Owen, Palæontology.*

1. In *Zoology.* Arachnid, i.e. member of the class represented by the spiders, of the genus Ixodes (*ricinus*).

2. Variety of field bean; probably from its likeness in shape to the animal: (the castor-oil plant, with a similar seed, is named in botany, *ricinus.*)

The common or *tick* bean occupies the same position in England that the Scotch bean does in Scotland, and is frequently called the 'horse bean.' This and the preceding sort are probably from the same stock; soil, climate, and the continued operation of dissimilar causes for a lengthened period producing the difference which now exists between them. The *tick* bean is shorter strawed than the Scotch bean, and said to be fully more prolific, and also better adapted to light soils. The seeds are about one third smaller than those of the Scotch bean, weighing about eight grains each; they are also rounder, plumper, and less dimpled. The weight per bushel is about the same as the last [common Scotch bean]. . . . There are several varieties of the *tick* bean in cultivation, locally known under the following names: Harrow *tick*, flat *tick*, Essex *tick*, and French *tick*; but they are so much alike that a separate description is deemed unnecessary.—*Morton, Cyclopædia of Agriculture.*

Tidbit. *s.* See Titbit.

Tidal. *adj.* Constituted by the tide.

High water takes place at Jersey nearly half an hour before it reaches Guernsey, and three-quarters of an hour before Alderney. The velocity of the *tidal* current, where not increased by narrow passages, is from two and a half to three miles per hour. —*Ansted, The Channel Islands*, pt. i. ch. i.

This is nearly the greatest amount of *tidal* drift that the Kingstown and Holyhead steamers are subject to. Their greatest drift is 8·16 knots, which will occur to the south, when their times of departure and arrival are one and five by the *tidal* clock; and 8·16 knots to the north, when their hours of departure are seven and eleven by the tide. There is, therefore, in this four hours' run, which is made at the rate of 16 miles per hour, a possibility of the steamer finding herself, if she neglect the *tidal* stream, nine miles to the north or to the south of Holyhead or Kingstown. In a fog, when the passage is delayed, it has sometimes happened that these steamers have found themselves off Bray or Dalkey Sound, when they supposed they were close to the mouth of Kingstown Harbour. The *tidal* stream in the Irish Sea is greatly modified by the wind, which, if northerly, will cause the ebb tide to carry out more water than its proper share past the Tuskar entrance, and, vice versâ, the wind, if southerly, will aid the ebb tide through the North Channel, and seriously embarass vessels beating to the southward.—*Haughton*, in *Transactions of the Royal Irish Academy.*

Tide. *s.* [A.S. *tid, tyd.*—see under Time.]

1. Tide; season; while.

There they alight in hope themselves to hide

What hath this day deserved,
That it in golden letter should be set
Among the high *tides* in the kalendar?
Shakespear, King John, iii. 1.

2. Alternate ebb and flow of the sea.

The motion of the water called *tides* is a rising and falling of the sea: the cause of this is the attraction of the moon, whereby the part of the water in the great ocean which is nearest the moon, being most strongly attracted, is raised higher than the rest; and the part opposite to it being least attracted, is also higher than the rest; and these two opposite rises of the surface of the water in the great ocean following the motion of the moon from east to west,

and striking against the large coasts of the continents, from thence rebound back again, and so make floods and ebbs in narrow seas and rivers.—*Locke.*

In the . . . hurricane of January 8, 1839, there was no *tide* at Gainsborough, which is twenty-five miles up the Trent—a circumstance unknown before. At Saltmarsh, only five miles up the Ouse, from the Humber, the *tide* went on ebbing, and never flowed till the river was dry in some places; while at Ostend, towards which the wind was blowing, contrary effects were observed. During strong north-westerly gales the *tide* marks high water earlier in the Thames than otherwise, and does not give so much water, whilst the ebb tide runs out late, and marks lower; but upon the gales abating, and the weather moderating, the *tides* put in and rise much higher; whilst they also run longer before high water is marked, and with more velocity of current; nor do they run out so long or so low.—*Sir J. Lubbock*, in *Philosophical Transactions*: 1831.

3. Commotion; violent confluence, as of a tide.

As in the *tides* of people once up there want not stirring winds to make them more rough, so this people did light upon two ringleaders.—*Bacon, History of the Reign of Henry VII.*

Flows from th' exhilarating fount.
J. Philips, Cyder, ii. 273.

5. Turning point.

Is bound in shallows and in miseries.

The boatswain metaphorically observed, they were in a narrow channel and behoved to keep sounding the *tide-way.*—*Sir W. Scott, The Pirate*, ch. xxxiv.

Now is the time for the men to come forward who have claims. . . . They once looked to the privy council, but would now be content with an hereditary honour; if they can have neither, they will take a clerkship in the treasury for a younger son. Perhaps they may get that in time; at present they go away growling with a gangership; or having with desperate dexterity at length contrived to transform a *tidewaiter* into a landwaiter. But there is nothing like asking—except refusing.—*B. Disraeli, Sybil*, b. i. ch. vi.

Tiding. *part. adj.* Flowing, or running in, agitated by, a tide.

Tidology. *s.* Theory, doctrine, philosophy of the tides: (a hybrid word, i. e. English and Greek, and one recently coined).

It is thus, for example, with the theory of the tides. No one doubts that *tidology* (as Dr. Whewell proposes to call it) is really a science. As much of the phenomena as depends on the attraction of the sun and moon is completely understood, and may in any, even unknown, part of the earth's surface, be foretold with certainty; and the far greater part of the phenomena depends on those causes. But circumstances of a local or casual nature, such as the configuration of the bottom of the ocean, the degree of confinement from shores, the direction of the wind, &c., influence, in many or in all places, the height and time of the tide; and a portion of these circumstances being either not accurately knowable, nor precisely measurable, or at least not capable of being certainly foreseen, the tide in known places commonly varies from the calculated result of general principles by some difference that we cannot explain, and in unknown ones may vary from it by a difference that we are not able to foresee or conjecture. Nevertheless, not only is it certain that these variations depend on causes, and follow their causes by laws of unerring uniformity; not only, therefore, is *tidology* a science, like meteorology, but it is, what hitherto at least meteorology is not, a science largely available in practice. General laws may be laid down respecting the tides, predictions may be founded on those laws, and the result will in the main, though often not with complete accuracy, correspond to the predictions. . . . *Tidology*, therefore, is not yet an exact science; not from any inherent incapacity of being so, but from the difficulty of ascertaining with complete precision the real derivative uniformities.—*J. S. Mill, System of Logic*, pt. vi. ch. iii. § 1.

Neither has the assertor of any new thing a right to claim an answer in the form of Yes or No; or think, because none is forthcoming, that he is to be considered as having established his assertion. So much is unknown to the wisest man, that he may often be without an answer: as frequently he is so, because the subject is in the region of hypothesis, and not of facts. Derived from old heroic *tilters*. *Butler, Hudibras.*
If war you chuse, and blood must needs be spilt here,
Let me alone to match your *tilter*. *Granville.*

Tilth. *s.* Husbandry; culture; tillage; tilled ground; cultivated land.
Bourn, bound of land, *tilth*, vineyard, none;
No use of metal, corn, or wine, or oil.

New reap'd. *Milton, Paradise Lost*, xi. 429.

Tilting. *part. adj.* Act of one who, that which, tilts.
1. In, or as in, a trial of arms.
His [Abélard's] education ripened with unexampled rapidity his natural character; no man is so overbearing or so stubborn as a successful disputant; and very early in life Abélard became the most

powerful combatant in the intellectual *tilting* matches of the schools, which had now become one of the great fashions of the day.—*Milman, History of Latin Christianity*, b. viii. ch. v.

Timber. *s.* [A.S. *timber; timbrian* = build.]

1. Wood fit for building.

The straw, as first I said, was laid below,
Of chips and serewood was the second row;
The third of greens, and *timber* newly fell'd.
Dryden, Palamon and Arcite, iii. 973.

Who set the twigs, shall he remember,
That is in haste to sell the *timber?*
And what shall of thy woods remain,
Except the box that threw the main?
Prior, Alma, iii. 558.

Timber also is part of the inheritance. Such as oak, ash, and elm in all places; and in some particular countries, by local custom, where other trees are generally used for building, they are for that reason considered as *timber*; and to cut down such trees, or top them, or do any such other act whereby the *timber* may decay, is waste. But underwood the tenant may cut down at any seasonable time that he pleases; and may take sufficient estovers of common right for house-bote and cart-bote, unless restrained (which is usual) by particular covenants or exceptions.—*Sir W. Blackstone, Commentary on the Laws of England*, b. ii. ch. xviii. § 6.

[The] tenure [of the villeins] bound them to what were called villein services, ignoble in their nature, and indeterminate in their degrees, the felling of *timber*, the carrying of manure, the repairing of roads for their lord, who seems to have possessed an equally unbounded right over their labour and its fruits.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ii.

As the *second element* in a *compound*.

For the body of the ships no nation doth equal England for the oaken timber wherewith to build them: but there must be a great providence used, that our *ship-timber* be not unnecessarily wasted.—*Bacon, Advice to Villiers.*

2. Main trunk of a tree.

We take
From every tree, lop, bark, and part o' the *timber*,
And though we leave it with a root thus hackt,
The air will drink the sap.
Shakespear, Henry VIII. i. 2.

3. Materials.

Such dispositions are the very errors of human nature, and yet they are the fittest *timber* to make politicks of, like to knee *timber*, that is good for ships to be tossed, but not for houses that shall stand firm.—*Bacon.*

Timber. *v. n.* [?] Light on a tree.

The one took up in a thicket of brush-wood, and the other *timbered* upon a tree hard by.—*Sir R. L'Estrange.*

Timbered. *adj.* Built; formed; contrived.

Timbersow. *s.* Worm in wood; perhaps the woodlouse. So the explanation stands in Johnson; the first part, *zoologically*, being inaccurate; inasmuch as the woodlouse is no worm but an isopod crustacean of the genus Oniscus. The second part in respect to its *etymological* correctness is confirmed, first, by the word *sow* being used as a name for certain members of the genus, and, secondly, by the fact of *hoglouse* being a synonym.

Divers creatures, though they be loathsome to take, are of this kind; as earth-worms, *timber-sows*, snails.—*Bacon.*

Timber-toe. *s.* [two words.] Term applied, ludicrously, to a person with a wooden leg.

Timber-tree. *s.* Tree producing timber. See extract.

Tímbre. *s.* [Fr. = bell of a clock, gong.] See extract.

Timbre [is] a word borrowed from the French, and used in Acoustics to signify the quality of a musical sound, termed by the Germans Klangfarbe, 'sound-tint.' When precisely the same note is sounded on two different musical instruments, say a pianoforte and an organ, although the 'pitch' of the note, i.e. the number of vibrations per second, is the same in both, yet the two sounds are quite distinct. This distinction is due to a difference in the *timbre* of the two notes. The Germans express this by saying the sound has a different colour or tint in the two cases. This peculiar quality in musical sounds is caused by the mingling of a series of secondary tones with the primary one. When, for example, the string of a pianoforte is struck, the string, whilst vibrating as a whole, is at the same time divided, and again subdivided, into aliquot vibrating segments, which, as it were, ride on the back of the principal vibration. These vibrating subdivisions give rise to a series of higher notes, of gradually lessening intensity, called the 'harmonics' of the primary note. The character and number of these harmonics coexisting with the principal note, is the cause of the *timbre* or quality of sound peculiar to different musical instruments.—*Pole*, in *Brande and Cox, Dictionary of Science, Literature, and Art.*

Tímbre. *s.* See extract.

Timbre, in Heraldry, [is] the crest which in any atchievement stands a-top of the helmet.—*Bailey's Dictionary* in voce.

Tímbrel. *s.* [derived by Johnson from *timbre*; Todd demurring to the etymology, and suggesting that it 'is perhaps a corruption of *tambour* or *tambourine*.' The two origins are not only capable of being reconciled, but are essentially the same.] Tambourine.

The damsels they delight,
When they their *timbrels* smite,
And thereunto dance and carol sweet.

Time. *s.* [A.S. *tim, tima.* In the allied languages the ordinary word is *tide*; Danish, *tid*; German, *zeit*; in the Norse, *time, tima* = hour.]

1. Measure of duration.

This consideration of duration, as set out by certain periods, and marked by certain measures or epochas, is that which most properly we call *time*.—*Locke.*

Time is like a fashionable host,
That slightly shakes his parting guest by the hand,
But with his arms out-stretch'd, as he would fly,
Grasps the incomer.
Shakespear, Troilus and Cressida, iii. 3.

Nor will polished amber, although it send forth a gross exhalement, be found a long *time* defective upon the exactest scale.—*Sir T. Browne, Vulgar Errours.*

Time, which consisteth of parts, can be no part of infinite duration, or of eternity; for then there would be infinite *time* past to-day, which to-morrow will be more than infinite. *Time* is one thing, and infinite duration is another.—*Grew.*

2. Space of time.

Daniel went in and desired of the king that he would give him *time*, and that he would shew the king the interpretation.—*Daniel*, ii. 16.
